## ACCURACY

This word, in film processing, is a very important word indeed.

People tell you that one film processing job is as good as another, and what the heck, what's the measure of accuracy, anyway?

Well. To answer that one would take a very long time. Suffice it to say here that it's summed up in *all* the operations of a processing job, where even the smallest details are of great importance. It shows everywhere, and it positively *shines* when the film appears on the screen.

What we're talking about, of course, are the people and the operations at Precision Film Laboratories. Here attention to detail, sound, proven techniques are applied by skilled, expert technicians to assure you the *accurate, exact* processing your films deserve to justify your best production efforts.

Accuracy is a must for TV—for industrials—for education—for *all* movies.

## Flo-master felt tip pen

Teachers who use this all-purpose felt-tipped pen for visual aid and drawing projects often wonder how they ever got along without it. The Flo-master is a truly universal writing tool ...for paper, wood, glass, metal, cloth, rubber and even plastics. Whether you want to make visual aids, charts, graphs, maps, posters or flash cards ... or art or lettering, your Flo-master is always ready for instant action — and no clean-up afterwards!

Peter Brandwein, New York Times; Van Wyck Brooks, author; Mabel B. Casner, educator and author; Alice Elizabeth Chase, Yale University; Robert J. H. Kiphuth, Yale University; Carroll L. V. Meeks, Yale University; and Stanley T. Williams, Yale University.

The release of the final six units and Teacher's Guides in this magnificent series climaxes nearly five years of scholarly, painstaking work on the part of distinguished historians, educators, visual aid specialists and qualified technicians. Authorities agree that they have successfully created the most comprehensive and effective supplementary tool ever devised for the teaching of United States history and related subjects.

Rare source material used throughout the 30 units adds authenticity and vivid reality to the full sweep of America's growth and development in all of its important aspects, including the lesser-known areas of our sociological, industrial and cultural progress.

An illustrated, professionally written Teacher's Guide accompanies each of the 30 units and greatly augments the value and appeal of the filmstrips for classroom instruction.

Enthusiastically endorsed as "top-flight material" and "of the highest calibre," the series has been approved and adopted by leading Boards of Education and has been successfully integrated into the course of study at all levels.

## On the SCREEN

### Cover: The Great Adventure

On this month's cover you meet six-year-old Kjell Sucksdorff, a Swedish boy for whom each day is a great adventure. Kjell is the son of Arne Edward Sucksdorff, who made the motion picture *The Great Adventure*, one of the great films of recent years. For a lyrical review of this "lyric film poem about the moods of the seasons, the moods of forest animals, and the moods of little boys," see page 26 in this issue.

### Welcome 1957!

Whatever else 1957 may bring, it is certain to bring new and old audio-visual challenges. Many of you readers must meet the basic AV challenge head-on: how to provide teachers with all the teaching materials they need exactly when they need them and with a minimum of effort on their part. Can this be done best through a unified instructional materials program? Edward T. Schofield will tell you why he thinks so and how such a program works — on page 18.

If you want the challenge of an exciting, brand-new audio-visual teaching tool, turn to Phil Lewis' picture story on page 22. In one minute you'll find out how to make slides in three minutes.

If you're already tired of 1957 challenges, take a look backward with M. I. Smith to the AV challenges of the early 1900's. Listen to his description of an old lantern slide projector: "The projector was a heavy, cumbersome machine. The illumination was from four acetylene burners, a load in itself. We also had to carry two

copper tanks of gas as well as a tripod stand, screen, and a heavy wooden box of 3 x 4 glass slides."

Just compare that load with our modern, lightweight, portable AV equipment — well, so the lady on page 34 does have a decided AV sag or list! It takes a strong back in every decade to get things done. We still wouldn't trade our modern AV problems for the AV problems of yesteryear. And we still think AV equipment makers have come a long way toward making AV equipment lightweight. (Is our list showing?)

If you want an intriguing way of running a nonstop film show, take page 14 into the projection room and follow the instructions. When Headmaster Bassett wrote us about the idea he picked up from a projectionist in Beirut, Lebanon — "a practical method for running two or more reels of film continuously on a single projector" — we had it tried out in our Rochester laboratory. Editor Reed assures us it works. We don't know how you'll put this trick to use. Maybe its performance could become a test item for student projectionists.

### How to Read Educational Writing

"Extensive research has shown . . ." — One or two abstracts of doctoral theses which the writer happened to come across.

"The most recent statistics available . . ." — They go back to 1946.

"Outstanding leaders in education believe . . ." — The writer believes it, at any rate. —JNS

For American

Literature Courses

## NEW CORONET FILMS

### AMERICAN LITERATURE:

*The Westward Movement*

### MARK TWAIN:

*Background for His Works*

### WALT WHITMAN:

*Background for His Works*

*American Literature: The Westward Movement* presents authors whose works were largely inspired by the spread into new and unsettled lands: Conrad Richter, Bret Harte, Hamlin Garland, and Francis Parkman. Liberal quotations from their works against a background of movement, building, and settlement give high school students a splendid opportunity to visualize the human context of great writing.

*Walt Whitman: Background for His Works* and *Mark Twain: Background for His Works* provide a visual basis for understanding the works of these authors in relation to the periods in which they lived. Abundant quotations from Whitman's poetry and Twain's prose form an integral part of the films. Both are for high school literature courses.

Other new CORONET films released this month (each one reel) include:

**Amphibians**—The characteristics of frogs, toads, and salamanders; how and where they live; what they eat; and their developmental changes. (Grades 4-10).

**Kindness to Others**—A class learns what kindness is and how to be kind to others. (Grades 1-3).

**Beginning Responsibility: Other People's Things**—A classroom illustrates in its activities how public and private property and borrowed or found articles should be cared for. (Grades 1-3).

All films are available in color or black-and-white.

### Write for preview . . .

# Have you heard?

## California AV Conference

"Teamwork, Key to the Audio-Visual Program" will be the theme of the annual conference of the Audio-Visual Education Association of California to be held in Bakersfield (Calif.) Jan. 31, Feb. 1 and 2, 1957. Cooperating associations are the California School Supervisors Association, San Joaquin Valley Section; School Librarians Association of California; Northern Section; California Elementary School Administrators Association, Central Section; and National Audio-Visual Association, Western Division.

Beginning **T h u r s d a y** afternoon dealers' exhibits will be open at all times that conference sessions are not scheduled. This will give conference goers an opportunity to see the newest in audio-visual materials and equipment.

Among the speakers will be Dr. Adrian L. Ter Louw of Eastman Kodak

Company, whose topic, "Good Seeing in the Classroom," will be presented at Friday afternoon's general session, and Dr. Elmo N. Stevenson, President of Southern Oregon College of Education, who will be banquet speaker Friday evening.

Saturday's sessions will include a series of brief demonstration-like presentations of classroom techniques.

General chairman for the conference is Miss Ruth Noel, president of the Audio-Visual Association of California.

## "Our Mr. Sun" on TV

"Our Mr. Sun," the first program in the new Bell System Science Series, was seen over the CBS television network on Monday, November 19. It is expected that three or four science programs will be produced and televised each year.

The program marks the television debut of the Academy-Award-winning

director, Frank Capra. The cast of "Our Mr. Sun" is headed by Eddie Albert and Dr. Frank Baxter, both well known to television audiences.

"Our Mr. Sun" tells the story of the sun, from its worship by ancient man to its use by modern man for a variety of purposes.

The programs will be on color film so that they may be used by schools, clubs, civic organizations, etc., for years beyond their brief hours on the air.

## Around the ETV Circuit

**OREGON.** Three commercial TV stations in Oregon are participating in an experiment in educational television for the state. The three stations are telecasting over a 13-week period two series of programs from the national Educational Television and Radio Center. The broadcasts are a part of the extended services of the Center. The television committee of the state board of higher education is presenting these examples of educational broadcasting as a part of its study of the opportunities and possibilities in educational television for Oregon. The commercial stations: KOIN-TV, Portland; KVAL-TV, Eugene, and KBES-TV, Medford. Educational programs being aired are: "The Finder," a series from St. Louis ETV station KETC for children 9 to 12; "Spotlight on Opera," designed to acquaint the layman with opera, and "The Painting," a series showing the actual creation of a work of art by Siegfried Reinhardt. Reactions to the programs from Oregon viewers will help to determine whether educational TV efforts should be expanded in the state.

**CHICAGO.** There's "Today" and "Tonight" on TV and now educational television station WTTW in Chicago has come up with "Tomorrow." With the help of the Adult Education Council of Greater Chicago, the station gives a rundown of the following day's educational and cultural events in the Chicago area at 10:00 each night. A weather forecast is included.

(Continued on page 10)

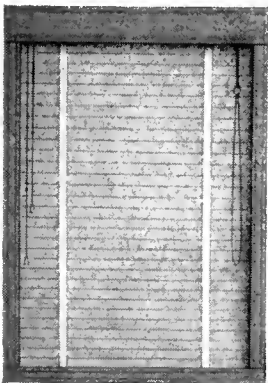

Cooperating organization representatives are shown making final plans for the annual conference of the Audio-Visual Education Association of California, to be held in Bakersfield, Jan. 31, Feb. 1 and 2. Seated: Mrs. Elsie Holland, School Library Association, Northern Division; Miss Ruth Noel, president AVEAC, Dr. George Ormsby, Bureau of Audio-Visual Education, State Department of Education. Standing: Ron Cook, president School Supervisors Association, San Joaquin Valley Section; Dick Utz, NAVA Western Division; Paul Richert, California Elementary School Administrators Association, Valley Section.

## How Dark Should an Audio-Visual Room Be?

**ANSWER:** The lighting condition of an audio-visual room should be governed entirely by its effect on the progress of the student. The brilliance of the screen image should be considered only as a secondary factor.

Experienced audio-visual educators realize that the importance of the projection has been over-emphasized, often to the detriment of the student. It is also recognized that various conditions and various subjects require elasticity in the control of light. This control should be simple and immediate.

*There is only one window covering that can meet these specifications—a venetian blind especially designed for this purpose.*

With the LEVOLOR A.V., the instructor can change the room from maximum darkness to a soft diffused light—all by an adjustment of the slats in a matter of seconds.

★ ★ ★ ★ ★ ★ ★ ★ ★ ★ ★ ★ ★ ★ ★ ★

Full details and specifications will be sent on request. Write to—LEVOLOR LORENTZEN, INC., Audio-Visual Dept., 720 Monroe Street, Hoboken, New Jersey.

*Be sure to specify*

# WARNING!

## CARBON TET PROVES FATAL!

Carbon tet poisoning has been listed as a contributory factor in the recent death of a film editor. Following this tragedy, the National Association of Broadcast Employees and Technicians has launched a determined drive to ban the use of carbon tet as a film cleaner. "Carbon tet can poison," the association warns. "If you're using it, better switch to another product!"

### Switch to NON-TOXIC

# ECCO #1500

#### Anti-Static Film Cleaner

- Cleans Better, Dries Faster Than Carbon Tet
- Cleans, Conditions, Lubricates Film in One Operation
- Non-Poisonous — Non-Flammable
- Stops Dirt-Attracting Static
- Fast-Drying
- Conditions "Green" Prints, Kine Films
- Keeps Films Pliable, Eliminates Waxing
- Fewer Cleanings Needed
- Absolutely Safe for Film, Personnel

Don't risk the health of your personnel — stop cleaning film with deadly carbon tet! Start using ECCO #1500, the anti-static film cleaner that contains no poisonous carbon tet . . . cleans, conditions and lubricates in one application!

ECCO #1500 is the film cleaner used in most audio-visual centers, film libraries, schools and colleges. And ECCO #1500 is used by many Hollywood film studios and TV networks — NBC, CBS.

Discover for yourself that it pays to clean film as the industry's leaders do — with ECCO #1500.

\*National Audio-Visual Association Bulletin, October, 1956

**ELECTRO-CHEMICAL PRODUCTS CORP.**

60-E Franklin Street, East Orange, N. J.

PITTSBURGH. WQED's Adult School of the Air has begun its third consecutive year. The Pittsburgh station is offering this semester courses in English, World History, Algebra and Physics. The educational cycle of 16 units leading to a certificate of graduation can be completed in two years, providing, of course, that students pass the regular examinations given by the Pennsylvania Department of Public Instruction or the Veterans Testing Center of the Pittsburgh Board of Education. But 70 percent of the adults taking tests have passed to date. Forty-six students were graduated in September. Sixteen of this year's grads received their certificates in absentia: 11 of them are inmates of the Western State Penitentiary and five are at the Allegheny County Workhouse.

BOSTON. An intriguing set of brain-teasers recently telecast by WGBH-TV, Boston, has created a serious state of mental unrest among the station's viewers. M. I. T. Professor Eugene Boehne proffered a dozen cranium busters — all of which could be worked out logically by anyone (in time). Phone calls to the station started coming in while the program was still on the air and they were followed by a flood of letters, telegrams and post cards. After wrestling with the problems for varying periods of time, the majority of people complained of lack of sleep and bankrupt heads. But all sought the solutions and peace of mind. Among the out-of-state letters (from viewers passing through Boston) was a plea from San Francisco for the answer to the tribe of Indians question so that I can sleep once more. A telegram from Chicago read, "Received your solutions. Now, please send professor!"

### People & Jobs

DAVID E. STROM, until recently with the Jam Handy Organization, has been appointed audio-visual advisor to the Ministry of Education of the government of Iran. His headquarters will be in the Iranian capital, Teheran, and he will be associated with the Syracuse Film Project. He is accompanied by his wife and three sons. His responsibility will be to set up audio-visual operations for elementary and secondary schools and for adult education programs.

GRACE T. STEVENSON of the American Library Association was installed as president-elect of the Adult Education Association of the U.S.A. at the organization's annual conference in Atlantic City in November, 1956.

SAM S. BLANG, formerly AV coordinator for East High School in Denver, Colorado, has been promoted to the position of general curriculum coordinator. He is also teaching an audio-visual education class for the University of Colorado Extension Division. He has been appointed chairman of the local committees and arrangements for the National Science Teachers Association convention to be held in Denver in March of 1958.

KENNETH ALAN SILVER, General Manager of Automatic Projection Corporation, was married to MIRIAM GOODMAN on November 4. Miss Goodman is an elementary school teacher.

DON ELY has joined the staff of the Audio-Visual Center at Syracuse University to replace RAY HADSELL, who has gone to Iran for a year as audio-visual adviser to the University of Teheran.

### Book Parade in B & W

Schools that have wanted to use the Picture Book Parade film series in their elementary language arts program, but who have had to shy away from the cost of color prints, will welcome the news that the Weston Woods Studios is now releasing their popular series in black and white as well as color.

Films may be previewed by watching for their periodic showings on the Captain Kangaroo Show on the CBS Television Network, or by requesting prints from the Weston Woods Studios, Westport, Connecticut.

### AV CALENDAR

January 17-19—NAVA Mid-winter Conference, Angebilt Hotel, Orlando, Fla.

January 31-February 2 — California Audio-Visual Association Conference, Bakersfield, Calif.

February 16—NAVA Eastern Dinner, Atlantic City, N. J. (during AASA Convention, Feb. 15-20).

March 1-5—NEA Department of Audio-Visual Instruction Conference, Sheraton Park Hotel, Washington, D. C.

March 17-21—12th Annual Conference, Association for Supervision of Curriculum Development, NEA, St. Louis, Mo.

# see why only **FILMOSOUND** is fully engineered for teaching!

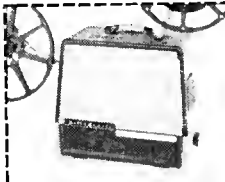

## COMPARE THESE EXCLUSIVE FEATURES AND PROVE IT TO YOURSELF!

- ① **Sharpest picture on the screen**—combined result of exclusive optical system: 5-element lens, double condenser, pre-aligned lamp and rhodium reflector.
- ② **Trouble-free operation**—due to exclusive all-gear drive and metered lubrication.

- ③ **400% longer projector life**—Five critical film-handling parts are surfaced with sapphires for heavy-duty use.
- ④ **Controls designed for teaching**—Projector reverses for review. Still-picture clutch stops film for discussion. Exclusive heat filter accessory permits brightest single-frame projection.
- ⑤ **Easiest and fastest set-up**—Projector permanently mounted in case. Top-mounted reel arms do not require removal between showings. Case design allows speaker to be left in place.

Take advantage of Bell & Howell's 25 years of leadership in sound movies and ask for a classroom comparison. Compare the Bell & Howell Filmosound Specialist with any other sound projector on the market today. Discover why the Filmosound Specialist out-features and out-sells all other sound projectors. Just mail in the coupon. Your Bell & Howell Audio-Visual dealer will be glad to arrange a classroom comparison at your convenience. HIGH JINKS in the study hall at the New London, Wisconsin, high school are at an all time low this year, thanks to a closed circuit television system which has provided a teacher that sees all.

The "teacher" with the all encompassing eyes is a small television camera mounted on a shelf. A coaxial cable hidden in the ventilating ducts carries the picture of the 100-seat hall to a 15-inch receiver set in the principal's office. There the principal's secretary and the secretary to the superintendent of schools keep roving eyes on the doings of the 550 students who make use of the hall off and on during the day.

The closed TV circuit is believed to be the first instance where video has been used for this purpose in a school.

Superintendent of Schools Paul M. Loofboro, who initiated the idea last year, explains the reason for the circuit this way:

"Every year it's getting increasingly difficult to secure teachers. In a few more years, large numbers of pupils will be advancing into high school from our elementary schools. When you're facing a teacher shortage, and a need for economy, this is the answer. Admittedly, it's second best to a teacher, but it has its advantages."

Loofboro said the pay scales for teachers in New London range from about \$3,300 to \$6,500, the average being about \$4,500. The TV circuit cost \$2,760.

Loofboro said maintenance and depreciation would make the cost of the set run about \$1,000 a year—about one-fourth the cost of a teacher. Actually Loofboro figures the circuit will save the school system about one-half the cost of a teacher each year because a teacher is still assigned to the study hall in the hours immediately before the noon lunch hour and before the dismissal time. He said the students are usually more restless during those periods. Nevertheless, the TV adds four teaching hours a day without adding to the payroll.

The superintendent said the TV eye has been accepted by both the students and the teachers. He said the teachers prefer to teach rather than take charge of the study hall, so there's no problem there.

As for the students, an excellent public relations job by the superin-

tendent and the faculty members has convinced the student body for the most part that the TV is a good thing.

When the circuit was installed last year, the pupils were given a chance to inspect the complete outfit from controls to the receiver. The superintendent also explained the reasons for the system at a general assembly of the student body. This year the plan was reviewed for the incoming freshmen.

Loofboro feels that the network will give New London students an opportunity to learn self-discipline. While the two secretaries, who keep an eye on the receiver, don't watch the set constantly, they're always in close touch with it. If decorum happens to fall by the wayside in the study hall, the general address system is handy for a fast call to a teacher in a nearby classroom or the librarian.

But Loofboro isn't anticipating the necessity of such action too often. It should be emphasized, he said, that the students aren't being nailed to their seats by the network. The idea is just to keep general tabs on the overall situation, he said.

"The kids have freedom and the opportunity to move around. No one feels restricted by the set," he said. An advanced student is always present to give a hand with the younger pupil's lessons.

Loofboro has been at New London for more than four years. Before that he was school superintendent at Wisconsin Dells. While at the Dells, he inaugurated two other firsts for the school systems—the use of airplanes as a teaching tool and the installation of a frequency modulated radio system in the high school to receive educational broadcasts from the state operated FM radio station.

The airplane course, while disregarding the mechanics of aeronautics, concentrated instead on "what the airplane does for society." Part of the course consisted in flying the students over the agricultural and forested areas near Wisconsin Dells to teach them conservation methods and needs.

## How to Run a Non-Stop Show On One Projector

by **T. ROBERT BASSETT**  
Headmaster, The Columbus Boychoir  
School, Princeton, New Jersey

**E**VEN THOUGH you have only one movie projector, you can still run two or more reels without interrupting the performance to change them. All you need is a splicer and a little practice. Here's how:

(1) Set up the splicer in tandem fashion behind the projector.

(2) Place reel No. 1 on the rewind spindle nearest the projector, carry the leader up and over an empty reel on the feed arm, and thread as usual. (If necessary, rig up some sort of support above the rear of the machine to prevent the film from rubbing on the case or crossing too close to the hot lamp.)

(3) Start the first reel. While it is running, place the second reel on the other spindle of the splicer, remove the leader, and ready the end edge for splicing.

(4) When there remain about two or three minutes of film on the first reel, turn the handle on the spindle arm and run the film onto the floor until you reach the end of the reel. Be careful as you approach the end not to let the film drop free and thus get twisted. Keeping the film in position, remove the trailer and splice the end of reel No. 1 to the beginning of reel No. 2, reinforcing the connection with a bit of Scotch tape, since the cement may not harden fast enough to hold the splice unassisted.

(5) Meanwhile, the film has been coming up off the floor from under the pile and you must keep an eye on it to catch any kinks that might form and carry a bunch of film toward the projector. This won't happen often and then only when the film is in poor condition. A simple shaking motion will loosen the film.

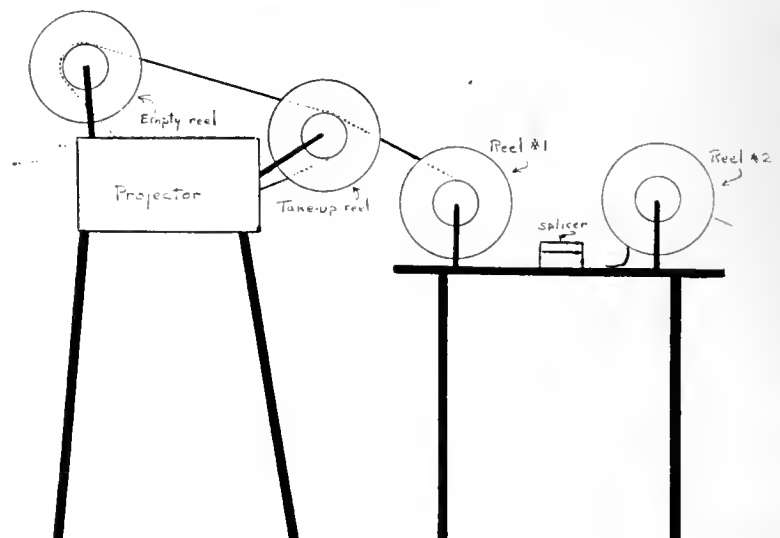

(6) With the splice completed, remove the now empty No. 1 reel from the left-hand spindle and shift reel No. 2 to its place, winding back upon it the film from the floor.

(7) Now move to your usual station at the right of the projector and watch for the splice to come through the machine. The signal dots at the upper right corner of the picture on the screen will help you spot the splice. When it reaches the take-up reel, hold the latter still and separate the splice, meanwhile letting the film run on the floor. When you break the splice, fasten the tip of the film to the edge of the table with Scotch tape to free your hands for removing reel No. 1 from the take-up arm and replacing it with an empty reel.

(8) Attach the film to the take-up reel and let the film slip through your fingers until it has all come up from the floor and is tight again in the machine.

(9) Now prepare reel No. 3 for splicing to the end of reel No. 2.

Here's how to set it up

# FREE FOR NEXT TERM

TWO FULL-COLOR FILMS!

**"JOURNEY TO BANANALAND"**  
gives an account of the land, people and products of Middle America and shows life in Middle America . . . how their ancient customs have survived to blend in with modern life.

**"WHAT WE EAT WE ARE"**  
pictures the importance of proper foods for health. In teaching the essentials of a well-balanced diet, this film features banana dishes which can be served around the clock.

## FULL-COLOR WALL CHART

The chart shows a map of Middle America plus an outline of Middle American resources and industries—including a pictorial outline of the banana industry.

You can have some help in planning interesting class sessions for the coming term. Mail this coupon for a catalog of teaching aids plus a full-color wall chart of Middle America. In addition, you will receive two manuals which will tell you how to obtain the two full-color films—"Journey To Bananaland" and "What We Eat We Are"—on a free loan basis. # Copyright Violations and TV

If laws could be written simply and clearly — so they would mean the same thing to everybody, so that everyone could understand them — there probably would be no need for lawyers — except, possibly, to write simple and clear laws. At times it seems to us there is no law so unclear and confusing as copyright law. Just when we think we are beginning to understand what copyright is all about, we are tripped up in our thinking by a new angle or a new interpretation that we hadn't thought about before. We have to start thinking again.

Take the problem involved with closed circuit television, for instance. All over the country experimental projects are moving forward in the application of closed circuit television to the solving of educational problems. Reports coming from these projects indicate that one thing that can be done efficiently via closed circuit television is the distribution of a motion picture image to several classrooms at the same time. It makes sense. The closed circuit television teacher, explaining a point in his television lesson, as a matter of course uses a motion picture or excerpt to make a point more meaningful, an explanation clearer.

But wait! He can't do that as a matter of course. The rights of others are involved; and copyright law protects the rights of others. We're told that under copyright law, closed circuit television is not different from broadcast television. When pictures are transmitted by television, they are copied and reproduced on television receivers. It may mean picture reproduction on only three receivers in three close-by classrooms, or it may be a picture copied on three million receivers scattered over a wide area. The principle is the same in all cases.

It is not alone for the dreamer, the educator, the electronics engineer to say that a picture *can be reproduced* by closed circuit television. It is the right, the privilege, and the responsibility of the copyright holder to say whether or not his picture *may be reproduced* by television. Presumably this interpretation applies also to the use of a copyrighted picture from a textbook just as it does to a motion picture or a filmstrip.

An educator's first reaction to the discovery of this copyright "block" to his educational plans might be one of resentment or even rage. He may cry out, "You can't do this to me! You can't prevent me from helping kids to learn." But others will take a second and third thought. They are ready to recognize and respect the rights of others. They will seek for reasons and understanding. They will realize that even in so worthy an

endeavor as the education of children, the rights of others must not be violated.

Closed circuit television has many applications and can mean many different things. It may mean the linking of only two or three classrooms within a single school building. But conceivably closed circuit television could also mean tying together the thousands of schools of an entire state so that a single picture could be projected to all simultaneously. Consider these different possibilities from a copyright owner's point of view. If you were in his position, you would move cautiously, and it is highly unlikely you would grant blanket permissions. You would consider all the implications. You would want the facts for specific cases, and it's likely you would make varying decisions to meet different sets of facts.

Maybe we should have sought the advice of legal counsel before attempting to editorialize on the subject of "copyright violations." But we didn't. We believe that simple common sense can be a guide to the use of copyrighted material. A copyright holder has rights and responsibilities in determining just how and under what conditions his copyrighted materials may be used. When his material is to be reproduced in any way whatsoever, his permission must be sought and obtained.

# READ...SEE...

*Why I believe a unified instructional materials program  
is better for teachers and pupils*

by EDWARD T. SCHOFIELD

Dept. of Libraries & Audio-Visual Aids  
Newark, New Jersey Board of Education

**T**HE BASIC responsibility of the librarian or the audio-visual specialist is to select and provide a wide range of instructional materials for teachers and children. More important than any consideration of status, patterns of administration, lines of division, and lines of cooperation is this foremost fact and challenge. Schools need instructional materials, and teachers should be able to procure them with a minimum of time-consuming effort, for it is an unmistakable fact that it is the teacher who is the instrument through which materials — books, films, tape recordings, and radio programs — are utilized with children.

If we can channel our thinking along these lines, it makes sense to study ways and means by which audio-visual educators and librarians can best make their contributions to serving teachers and children in the most efficient manner; for there are many ways and means by which instructional materials reach our nation's classrooms — frequently without the aid of either school librarian or audio-visual coordinator!

## **Topsy-like AV Growth**

So great is the need for wider sources of information in the teaching program that school administrators have often established systems of supply on a pragmatic basis. They have not waited for clearly defined departments of this or that to do a job that must be done.

They could not wait for trained staff and specialized quarters. As a result, surveys of school administrative patterns for the instructional materials programs reveal a good deal of diversity. They show how local needs and abilities of those who could do the job have developed many unique but useful programs. It is the Topsy-like quality of the growth of audio-visual education which in large measure accounts for the uncertainty regarding the way to continue those programs today; for the extension of work with instructional materials is now being gauged in terms of what has worked well, in marked contrast to the infancy of the movement when any motivating force seemed enough.

## **All Media Are Basic**

This need for supplying a wider range of teaching materials than the traditional book service undoubtedly propelled some librarians in schools into an audio-visual program. This was the point of departure for the school librarian who embarked on a broader path of service for the school library. Make no mistake — I said *the* school librarian and not "school librarians"! There is as wide a divergence of viewpoints among school librarians themselves as among any other group of educators regarding the role of the librarian in the instructional materials activity. However, an examination of the goals of school library service calls

attention to the essential need which brought school libraries into being in the first place. That goal was, and still is, to shape from the school library an intellectual activity which reaches into every phase of the school's life through the media of communication, for libraries historically and practically have been the channels through which ideas and knowledge have been transmitted. The librarian who is unable to cope with the thought of films intruding on the book domain has gone astray at this phase of development. Grace Stevenson, associate executive secretary of the American Library Association and herself a distinguished pioneer in audio-visual aids in the public library, says of these persons in the library profession: "Librarians need to do what they have not yet learned to do in many cases — to accept the film as a source of further information, different from the book in form, not in content." Many librarians say only, "Books are basic." Don't we really mean that ideas and knowledge and understanding are basic? If understanding, knowledge and beauty are in a book, then the book is basic. By this criterion many books are valuable. By this same measure many books are unworthy. If another medium, other than the printed word, reveals useful and/or beautiful ideas, then this medium is basic in the broad sense, whether this tool be an illustrated magazine, a film-strip, or film in a can.

# HEAR

Teachers and pupils need words and pictures, symbols and sounds. There is an inescapable unity in all types of instructional materials.

## Libraries as Pivotal Places

There was a time when the book provided the only recorded method of transmitting information. It is an elementary fact that a wide supply of instructional materials of infinite variety has supplemented the book. It is an obvious fact that the use of this wide variety of materials has required better organization of these aids for teaching. This is the point at which some libraries became the pivotal places for broader programs of instructional materials within the school or the school system, especially if no other agency or department felt the need or took the initiative. Instructional materials programs grew in school libraries in as simple and uncomplicated a fashion as this. Elements of competition or rivalry with some other arm of administration were nonexistent. A need, however, was present and alert school librarians proposed to do something about that need—particularly when the materials concerned were to them so basically a part of library service.

These school librarians, among them Marguerite Kirk of Newark, a pioneer and a continuing exponent of library organization for instructional aids, created a working pattern for these materials—all centralized in the school library. In a discussion of the role of the school library in this area, a practical illustration of principles is indicated. I shall describe how a unified

instructional program operates in the school library and in the city-wide school system of Newark, N. J. under the supervision and administration of a library director, in order to demonstrate that school libraries can manage unified programs of instructional materials.

## How It Works in Newark

The essence of the administrative plan is cooperation and close relationships with every phase of the administration and teaching activity. Audio-visual materials are selected, processed, and circulated from the Audio-Visual Center, an integral part of the Department of Libraries and Audio-Visual Education. Under the guidance of the Director, a library housing 4,000 films, 4,500 filmstrips, 4,000 recordings, 30,000 lantern slides, and miscellaneous sets of pictures for opaque projection has grown. Because the cardinal principle of the Department is cooperation, with a consequent insistence on non-duplication of effort, the mounted picture collection of the Public Library and the extensive lending collection of specimens, models, and objects of the Newark Museum are available immediately to teachers through the individual school library.

Films, slides, strips, and recordings, which are the principal stores of the Audio-Visual Center, have been chosen by the classroom teachers themselves. The materials are catalogued by li-

brarians, and processed by technicians; requests from teachers for loan of materials are filled by teacher-trained personnel. All items are loaned for one week or longer, and deliveries are made to the school libraries by a departmental driver on a regularly established trip day once a week. Museum materials and still pictures from the cooperating institutions are also delivered to the school library on a weekly basis.

Textbooks and other educational supplies intimately related to them are also coordinated through the Department of Libraries and Audio-Visual Education. Selection of textbooks is effected by teacher committees of the appropriate grade and subject level. A sample of every item appearing on the resulting "Approved List" is maintained in the Audio-Visual Center, together with all books on the "Approved Library List for Elementary Schools" in order that they may be examined at any time. The actual buying of books is the responsibility of each school principal; but inventory reports and transfers of not-in-use books are coordinated by the textbook division.

## Keeping the Schools Informed

The Department of Libraries and Audio-Visual Education supplies another essential need—that of keeping the schools informed of these resources. It is in the preparation of bulletins, bibliographies, and other special listings that the efficiency and economy of

this form of organization are very clearly evident. A resource bulletin for teachers contains, in a uniform method of presentation, all teaching materials that are approved and available for teachers in the city—from textbooks to museum materials; everything needful for the various curricular areas is brought together by trained bibliographers—librarians whose specialized training and experience are geared to make this task a relatively simple one. On the other hand, the teacher whose life is a pretty busy one anyway knows that the information she wants for the teaching program is in one location; she does not have to consult bulletins from multiple agencies or departments to locate desired materials.

### Advisory Assistance

The Department of Libraries and Audio-Visual Education provides staff for consultative and advisory assistance to the schools. Some of the staff is composed of fully trained librarians with complete audio-visual training meeting *even* the standards adopted recently in a few of the 48 states. Some of the staff is teacher-trained in a special subject field with equally complete audio-visual training. Staff duties range from conferences with teachers on the use of materials to production of materials and the training of teachers and students in the operation of equipment. We all have special responsibilities consonant with our training, interests, and capabilities. It isn't a question of audio-visual or library personnel. As in a radio station the success of the effort is the result of combining good engineering with good script writing and good production, so in the instructional materials department it is the combined efforts of a team of workers that make for a workable program. Librarians, teachers, technicians, supervisors, and producers working together are the essential ingredients.

### Functional Framework

The central office provides a functional framework which is duplicated on smaller scale in each of the schools of the city. As all teaching materials are administered centrally, so in the schools the teacher consults one agency—the instructional materials center commonly known as the school library. Since this is not the age of miracles, let it be said here and now that the success of this type of service varies from school to school, just as the audio-visual program in individual schools varies when the program is headed by an audio-visual coordinator. The human element is always present!

### The School's Responsibility

The instructional materials activity in the school involves the coordination of textbooks, library books, periodicals, pamphlets, films, filmstrips, museum materials, recordings, and other aids. Besides arranging for the loan of materials from central agencies, the schools maintain limited collections of certain types of audio-visual materials such as filmstrips and recordings. Librarians arrange for the distribution and inventory of textbooks with clerical assistance, and through knowledge from first-hand contact with text materials in use in the school, are able to advise on the use of other aids more wisely. Arrangements for the use of equipment and the scheduling of special rooms for screenings are arranged in the school library. Projection staffs are either under the supervision of a second librarian on the staff or a teacher cooperating in this phase of the program. All schools have special committees on the use of audio-visual aids, on museum relationships, and radio-television problems. These committees function to provide advice and to make recommendations on school needs directly from the point of view of the teacher.

The instructional materials program in Newark is not a static one. It has been changing in scope and policy for twenty years but its aim has never changed. That aim is coupled with the dictum so commonly used in school library literature. We aim not only to have "the right book for the right child at the right time"—but also to have "the right material for the right teacher at the right time" as well. This briefly is the philosophy and the modus operandi of one school situation in which all instructional materials have been centralized.

### Each Situation Is Unique

In turning to the consideration of the application of principles involved in this case study to a broader field of study—that of the centralization of all instructional materials in any school library, it is apparent that the task is more difficult inasmuch as the observation and reporting of accomplished work are always much easier than building new programs or changing established ones. A complicating factor is the uniqueness of each school situation. The size of a school—whether it has four classrooms or one hundred—will make a difference in the organization for service, even though the purpose of the service—that of providing teaching materials in the classroom—does not vary. The availability of collections of materials beyond those which the school can afford to own within its walls will and does affect the ad-

ministrative program. Staff potentialities are a paramount consideration. An administrator's telling a reluctant librarian, for instance, that henceforth her library is an instructional materials center does not improve the quality of the teaching materials program any more than does the assignment of a title of audio-visual coordinator to a teacher with no special training and with a full-time teaching load.

### Why the Library?

What, then, can be done about improving the instructional materials program? Faced as we are with a present situation, which, in general, is highly disorganized, can the school library offer a complete service of instructional aids that will meet the needs of the teachers and pupils? Can the job be done more satisfactorily through the library than through some other organization? There are several reasons why I believe the answer to this question is "Yes."

(1) There is an inescapable unity in all types of instructional materials, and to create artificial divisions within them seems false. The purpose of a book is comparable to the purpose of a film, a still picture, or a recording. These are all teaching aids which are used by the teacher with children. In the teacher's mind it is not important whether the still picture has been determined a library-supplied teaching aid or one which is to be secured from the audio-visual office. What is important is that the division of materials within the school building in numerous locations provides the surest way of frustrating the teacher and eventually limiting her instructional program to meager resources. The librarian who is trained properly can and will provide materials of a wide variety of physical format from a one-stop service agency—the instructional materials center.

(2) I do not believe that the average school administrator can secure funds for the maintenance of two or more separate organizations for teaching materials within the *individual* school. Although organized school libraries have a longer history in the American public school than do separate departments of audio-visual aids, many schools do not even yet have full-time library service—particularly at the elementary school level. The number of full-time coordinators within school buildings—or even the number of coordinators with some released time—is so limited that this fact alone indicates the financial problems encountered in securing personnel for the individual school building. From such evidence it would seem wise to *concentrate on the provision of at least one*

## How it works in Newark

**FLAT PICTURES.** Students help keep files of flat pictures and other instructional materials in order.

**MOTION PICTURES.** Here a department audio-visual instructor is training student projectionists.

**TEXTBOOKS.** A committee of teachers and supervisory personnel selects texts and educational supplies.

**MUSEUM MATERIALS & TV.** Here museum materials are being used on a television program, titled "Report to Parents."

person who can devote the entire day to instructional materials within the school. The teacher needs help with instructional aids during the entire day—not before or after school or during a "free" period of a teacher who has been assigned this chore.

(3) Library organization within the school permits the organization of a program of consultation and guidance which meets the lack mentioned above. Also, librarians by training are prepared to deal with the administration of collections of materials. Ordering, cataloging, processing, and circulating audio-visual materials are not very different, if different at all, from ordering, etc. the book kinds of materials found in traditional libraries. Teachers consult with librarians regarding books, pamphlets and magazines

needed in their units of work. When other aids are channeled through the library, this information too is available from one time-saving source.

### Good Planning Needed

Although the school library, from this point of view, is a logical center for unified programs, the development of the library as an instructional materials center cannot be done by fiat. Valuable though the training of librarians in library science may be in certain phases of work in the instructional materials center, there are other considerations. The librarian whose service is enlarged to encompass the whole gamut of instructional aids needs additional training in audio-visual aids. The instructional materials program within the school library

requires a re-examination of procedures which probably have become quite static in the school itself. The principal who has scheduled his library as a study-hall or as a room for the relief of overcrowded classes cannot expect an instructional materials program—for he is not even getting a book-centered library program under such an arrangement. Library quarters require considerable modification in order to house expanded collections of materials. In our planning for the schools in Newark, the library is the center of facilities for all types of materials. Adjacent to the library is the book storage room for textbooks. Two or more conference rooms for the use of teachers and pupils are provided. A large center for instructional materials,

# Slides in 3 Minutes!

by PHILIP LEWIS

**I**MAGINE taking a class of children on a field trip to the zoo, the museum, the book fair, the dairy or the farm and being able to project slides of the trip as soon as they return to the classroom. This dream-come-true and many others are now possible through the use of the new Polaroid Projection Film.

The regular models of the Polaroid camera are used for this purpose and two sizes of film are available to fit them ( $2\frac{1}{4} \times 2\frac{1}{4}$  and  $3\frac{1}{4} \times 4$ ). The smaller size is for use with a new projector that is now available, while the larger size will fit any standard lantern slide machine. It is possible to trim the  $2\frac{1}{4} \times 2\frac{1}{4}$  size to fit a  $2 \times 2$  mount. Each roll has eight exposures and incorporates a built-in framing feature that eliminates the need for masks. The speed of the film is so high (ASA 1000) that ordinary room lighting is usually sufficient for most picture taking. Despite this high speed, the film is panchromatic and has excellent gradation with a fine, even grain, designed to register detail.

In contrast to the conventional Polaroid paper film, the new product is of

a cellulose material and results in a positive transparency. Plans have been made to provide additional service where it is desired to copy the transparencies, make negatives, or to supply paper enlargements.

## Suggested Applications

(1) Slides showing athletic teams during practice or in competitive play can be projected in the locker room to correct techniques or to analyze strategy of the opposition.

(2) Images recorded of school rehabilitation needs, or of improvements effected, or of activities implemented, can be used as an illustrated report to school boards, civic groups, and Parent-Teacher Associations.

(3) A copying accessory frame can be employed to hold the camera in position for recording images of maps, diagrams, historical or research documents, or even materials for permanent record storage purposes.

(4) Slide collections, graphically illustrating effective instructional techniques and activities, can be used with in-service groups. Handicraft and creative arts are among those particularly

pertinent to such applications. Special subject supervisors will find this approach a real convenience.

(5) With kindergarten children, slides of the community helpers in the local school area become real personalities, rather than the usual stereotypes of the policeman, the fireman, the postman.

(6) Medical schools will applaud the effectiveness of being able to show the details of an operation, images from a microscope, or a close-up of an X-ray plate on a large screen.

(7) At the conclusion of an important educational convention or conference it is often desirable to review the activities just consummated and to evaluate accomplishments to assist in future planning. The projection of slides prepared during the meetings would serve the purpose of setting the stage for purposeful discussion.

(8) In the science areas, slides can be made of oscilloscope transients, of progressive steps processes or experiments, to show growth and/or development of organic objects, or the assembly of machines and devices. In some

*(Continued on page 36)*

## Here's what they look like

Mrs. Price's class in the Felsenthal School shows off the masks they have made. Slides made of classroom activities are useful in in-service meetings to stimulate ideas.

This is the start of a field trip from the Herman Felsenthal School in Chicago. Slides made during the trip can be ready for projection when the group returns to class.

A revolutionary new development promises to provide educators with an unusually effective teaching tool. As a participant in the Market Research Program of the Polaroid Corporation to fieldtest their new projection film, Dr. Philip Lewis attempted to determine its worth in school situations and to suggest specific uses. The findings as reported here should interest teachers in almost every area of instruction as well as audio-visual directors, administrators, and public relations personnel. Dr. Lewis is Principal of the Herman Felsenthal Elementary School in Chicago and a member of the editorial staff of EDSCREEN & AVGUIDE.

*Here's how  
to do it*

### SNAP PICTURE

The positive film used has an ASA equivalent exposure index or Weston rating of 1000 and permits indoor daylight photography without auxiliary lighting.

### PULL TAB TO DEVELOP

Development takes two minutes instead of the one minute required with the Polaroid Land Film that produces paper prints. A second exposure can be made while development takes place.

### REMOVE TRANSPARENCY

The pre-perforated film is easily removed. It must be handled by the extra tab provided for this purpose to prevent finger marks on the finished transparency.

### INSERT INTO DIPPIT

This step can be taken any time within 12 hours of removal from development. If it is to be done without loss of time, be careful not to rub the emulsion surface during insertion into the Dippit.

### INVERT DIPPIT

Closing the metal-hinged cover of the Dippit will seal the device even though the tab is protruding. Ten second immersion is sufficient to harden the transparency.

### REMOVE TRANSPARENCY

Do this with a smooth, even pull to prevent markings from the lips of the Dippit. Tear off the perforated handling lip at this time. Handle transparency by edges only.

### SNAP INTO FRAME

The cut corner of the film permits insertion of the transparency into the plastic mount. The top of the mount snaps easily into place. The slide is now ready to project — in three minutes!

# AV REMINISCING

ALEXANDER VICTOR's gift of the first 16mm projector to the DAVI archives brought to my mind two narrow range or nontheatrical motion picture projectors that I had seen in Minnesota schools. These machines were in use before the advent of the 16mm.

I found one of these machines in the attic of the Lincoln Junior High School when I started work in the Hibbing schools in 1924. This projector was an Acme-Pathe 28mm. The Acme-Pathe people made available several educational subjects on the 28mm safety film, one of which, "Animal Life," is now in the Hibbing school film library. In 1949 while turning over the Audio-Visual Department to my successor, Mr. George Monson, I mentioned this old projector. Mr. Monson was delighted to find it, saying, "I used that machine in my biology classes in 1918."

Possibly a machine of this type will also be made available for the DAVI archives.

The second of these old pre-16mm projectors was found in Central High School when I came to the Duluth schools in 1949. This machine was an Edison Kinetoscope manufactured in 1912, patented in 1897. The reel arms were missing—I tried to locate the spare parts through the Edison Laboratory Museum at East Orange, New Jersey, and located instead a complete machine. The two machines are identical except for data on the name plate.

We see that Mr. Edison wanted to protect the theatrical or commercial use of his invention and at the same time make it available for the non-commercial users.

## 1912: Home Kinetoscope

This "Home Kinetoscope"—"a combined Motion Picture Projecting machine and Stereopticon"—showed lantern slides as well as motion pictures. Illumination was by carbon arc and was so arranged that the light could be focused on either the slide or motion picture lens. The slides each contained ten views, each view projected separately. After the five views on the top row are thrown upon the screen, the slide is reversed and those on the bottom row are projected. The image on the screen corresponds in size to the motion picture.

by M. I. SMITH

Supervisor of Audio-Visual Projected Aids  
Duluth, Minnesota, Board of Education

The motion picture film is non-inflammable, 22mm in width and is made up of three rows of pictures. "Each picture is 3/16 inch high and 1/4 inch wide. There are over 200 pictures per foot. Eighty feet of this film contain as many pictures as 100 feet of the film used in theaters, and gives as long a performance—about 16 minutes." To quote further from the book of instructions: "The two outside rows run in the same direction and are thrown upon the screen by turning the crank of the machine to the right. The center row of pictures is projected by turning the crank of the machine to the left. Running the machine forward throws the pictures of the first row upon the screen in their proper order. A simple shifting device brings the second or center row into position. Running the machine backwards throws this row of pictures on the screen in their proper order and also rewinds the film preparatory to the projection of the third or other outside row of pictures by again using the shifting device and turning the crank to the right. Thus, without interruption or delay, all three rows of pictures can be thrown upon the screen as one continuous story."

When you consider that a 6 foot picture can be thrown upon the screen from one of these photographs, you will realize how highly they are magnified in projection. The successful printing of these tiny pictures on motion picture film is in itself a notable accomplishment; and when combined with methods of magnifying and lighting that give a perfect picture on the screen enlarged to 350 diameters or about 120,000 times the area of the picture on the film, the achievement becomes one of the most noteworthy in the history of the photographic art.

## 1914: Early AV Experiences

Present interest in these old machines brings to mind my early experiences in the use of projected aids which I am recording at this time in the hopes that others who may read

this will be prompted to do likewise. I will be interested in reading about the experiences that others had in early use of projected aids.

My acquaintance with projected aids began in Normal School where I was fortunate in being chosen "student assistant" to the head of the Science and Agriculture Department, Professor Fred T. Ullrich. Professor Ullrich received his training in the University of Chicago and came to Platteville Normal School in 1914 as successor to Dudley, who went to Madison to organize the Visual Extension Service of the University of Wisconsin.

My job as student assistant was to operate the lantern slide projector while the Professor lectured from International Harvester Company slides on "The Science of the Soil."

The projector was a heavy, cumbersome machine. The illumination was from four acetylene burners, a load in itself. We also had to carry two copper tanks of gas as well as a tripod stand, screen and a heavy wooden box of 3 x 4 glass slides.

In those days the use of projected aids was so uncommon that I was able to finish the University of Wisconsin in 1921 without being exposed to any such aids. The exception might be my use of an opaque projector in a seminar class to illustrate a plan of rural school consolidation around my home town of Fennimore.

## 1923: Yale Chronicles

In 1923 . . . the Yale Chronicles came out in 35mm silent. I took the matter up with my teachers. They thought it would be wonderful if the children could see these films. We thought they would be a real aid to an understanding of early American History, so we sent for "Daniel Boone." We had no projector in the Blackduck School, but arrangements were made with the owner of the Bijou Theater. Of course, every youngster who could find a nickel was a "history student." The teachers found nickels for youngsters who might otherwise have been

denied the history lesson. School was dismissed early and the bus drivers obligingly waited until after history class to begin their seven mile jaunt to the pupils' homes in the country. Four such history lessons were enjoyed that school year.

The next year I received an appointment as Director of the newly created Department of Agriculture and School Gardening at Hibbing. This position I accepted with enthusiasm not only for the opportunity to work out some ideas I had on teaching with pictures but also because the 12-month job paid \$50 a month more than the Superintendency at Blackduck.

### 1924: Progress in Hibbing

Hibbing High School had two 35mm Zenith projectors in the auditorium booth and the S.M.P.E. men had the key. That worked out all right when we wanted films for the High School and Junior College; but Hibbing had nine other schools in the Village, eleven in the mining locations and seven in the farming areas. The Junior High School had an Acme Portable,

so-called (it weighed 94 pounds), which we could use in the other village schools but not in the farm location schools, which had 32 volt light plants. One location school was supplied with 220 volt D.C. current from the Railway Shops.

We were determined that all children in the district should have equal opportunity to share in the advantages of this new aid; so a 32-volt, 35mm suitcase model DeVry was purchased. The chief sources of films were the University of Minnesota for Yale Chronicles, University of Chicago for the Erpi Science films, USDA for Agriculture and 4-H Club films.

We rented a few sets of 3 x 4 class slides from the University of Minnesota, and, of course, used USDA and IHC free slide sets on agriculture subjects. "Free," but the transportation could run as high as \$2.40 . . . when the USDA put their lecture sets on 35mm filmstrips and we could purchase five strips for the cost of transportation on one set of slides, we thought it was time to purchase a film-strip projector!

Of course, we still used the Keystone Geography Slides, and the Bausch and Lomb Opaque was the delight of teacher and pupil alike. I wonder if the most modern of projected aids will ever afford an equal thrill to the youngster who saw his drawing or his work sheet projected on the big screen in color!

### 1926: 16mm Is Here

And then came the 16mm! . . . I had the unique experience of producing 16mm films before we used the 16mm films in the classroom. Our elementary supervisor had promised to take motion pictures of her primary library excursion to the NEA meeting scheduled for Boston in February of 1926. To the library excursion film was added a Junior Red Cross Christmas Activity and an Intermediate Grade student assembly program.

Because I had taken so many still pictures of my school garden and 4-H Club Livestock activities, they thought I could take the movies! We borrowed an Eastman hand-crank box movie

*(Continued on page 32)*

Left to right: M. I. Smith, Supervisor of Audio-Visual Projected Aids, Board of Education, Duluth, Minnesota; K. Spelletich, Jr., Sales Manager, Victor Animatograph Corporation, Davenport, Iowa; and Lee W. Cochran, Director, Bureau of Audio-Visual Instruction, State University of Iowa, Iowa City, Iowa. Mr. Smith is presenting a 1912 model of the Edison Home Kinetoscope projector to the DAVI archives, located in the State University of Iowa Library. The men are comparing the Edison Home Kinetoscope projector (22mm-three-picture type) with one of the first 16mm projectors manufactured in 1923 by the Victor Animatograph Corporation and presented earlier to the archives by S. G. Rose, Victor President. The 44-year-old Kinetoscope projector was obtained for the archives through the cooperation of President Rose.

# Evaluation of new films

by L. C. LARSON

Director, Audio-Visual Center  
Indiana University

CAROLYN GUSS

Associate Professor, School of Education  
Indiana University

and JOHN FRITZ

Instructor, School of Education  
Indiana University

*Film reviews and evaluations on these pages are based upon discussions by a preview committee composed of Indiana University faculty members, public school teachers, students of audio-visual education, and staff members of the Audio-Visual center of Indiana University.*

*Preview prints should be sent directly to the Audio-Visual Center, Indiana University, Bloomington, Indiana.*

is the sound of exploding dynamite rapidly intercut with the deafening noise of close-by jets. The aftermath: one lone baby fox crying fitfully as he tugs at the dead body of another fox. Since there is "so little time for grief, and joy is short-lived too," the otter playfully provides relief.

In the symphonic structure of this film the preceding action has been an introductory "statement of theme." Now Anders and his six-year-old brother, Kjell, explore the wild outdoors, for to them "each day is a great adventure." The mysteries of nature are at once beautiful, enticing, and fearful. The owl preys on the mouse. The surviving fox cub goes to forage in the same barnyard his mother had visited. A chained dog struggles in an effort to free himself as the cub pulls a pair of hose from a wash line. When the fox steals food from the dog's pan, the dog pulls the chain loose from its nail and chases the fox. In the wood, the dog's chain becomes entangled with a fallen limb long enough to ensnare him as prey for the quietly waiting lynx. The fox cub goes on to play with the otter.

The seasons change. By December the lake is frozen and the entire landscape is blanketed with snow. The otter re-introduces himself by pulling a plant beneath the snow from underneath. Similarly, the otter steals fish from the fisherman's lines set in holes chopped in the ice. The fisherman chases the otter across the snow until the otter finds asylum in a burrow too small for the old fisherman to enter. Since it is almost dark, the fisherman decides to place an alarm clock at the entrance, because the ticking noise will keep the otter in the burrow until the next day when he will have time to capture it.

To obtain an alarm clock, the fisherman goes to Anders' house, where both Anders and Kjell hear the details of the otter's predicament. Anders is determined to save the otter from the fisherman, so he attempts to leave the house alone after Kjell is asleep, because he is afraid that "Kjell would get us caught." He even wears his father's boots to conceal the identity of his own footprints in the snow. But Kjell wakes up and follows Anders. He offers his sweater to improvise a sack when Anders finds it hard to carry.

*(Continued on page 28)*

mals might witness it on an early morning. The delicate and sad folk-song theme of the opening title music is transformed into an orchestration of indigenous forest sounds, a counterpoint to the misty stillness of the lake, the forest, and the field. But this beautiful serenity is disturbed by noises coming from the barnyard where the audience discovers a vixen escaping with a chicken. The angry farmer, protecting his living, gives chase, but the fox eludes him. The mother fox gives her quarry to her hungry cubs who savagely fight each other for each mouthful. With chicken for an appetizer, the fox family continue their feast by raiding a tern's nest while the helpless wailing birds circle overhead. The sandpipers are slated to be the next victims, but when the lynx appears to threaten the foxes, they scurry to their den.

The vengeful farmer carries a gun with him everywhere as he performs his farm duties, hoping that the vixen will show herself again. During the autumn harvest the farmer sights the fox as she carries a hare across the field. She pauses to nibble when she enters the forest, for if she waited until she reached the den, her cubs would leave her no food. This time the farmer's aim is sure. The unsuspecting target, fatally wounded, dashes panic-stricken into the woods where she expires. Close by the dead body the farmer finds the den of cubs. Dynamiting is an efficient and modern way of destroying them. As he prepares to dynamite the den, there is an ominous sound in the air. The birds are alarmed. The owl looks up to see jet trails in a turbulent sky pattern. The fizzing of the burning fuse is blended with the noise of jets. The owl waits in suspense. Suddenly there

## THE GREAT ADVENTURE

(Louis de Rochemont Associates, 380 Madison Ave., New York 17, N. Y.)  
78 minutes, 16mm, sound, b&w, 1956,  
\$150 lease for life of print. Produced  
by Arne Sucksdorff.

### DESCRIPTION

In *The Great Adventure* a film artist reveals the universal experience of living. Arne Edward Sucksdorff, in the realistic tradition of Swedish film makers, creates a lyric film poem about the moods of the seasons, the moods of forest animals, and the moods of little boys.

Sucksdorff had originally intended to make a film about the four seasons as seen through the eyes of a Swedish lynx, but the film that finally emerged has the philosophical viewpoint of a human adult reflecting upon scenes of his childhood. Anders, during the summer that he is ten, wakes up to the life around him, life as the forest ani-

## Which classroom has the Pageant Projector?

TO keep attention from wandering, school movie showings require the smoothest possible presentation.

That's why it's so important that even an inexperienced person be able to set up a projector easily . . . that the sound be true and resonant, not garbled or interfered with by distracting projector noises . . . that the picture be sharp and sparkling, even in a room that's light enough for note-taking.

With a Kodoscope Pageant 16mm Sound Projector you're sure of all these things that make for a smooth showing. Good movies look their best, sound their best on a Pageant. Students watch the screen, not the projector.

The Pageant's easy-to-follow printed film path is right on the projector. It has single-switch reversing. Exclusive Kodak Super-40 Shutter puts 40% more light on the screen at sound speed than ordinary shutters. Its complete sound system includes baffled speaker, tone and volume controls, and sound track focusing beam.

The portable Pageant Projector also gives you freedom from maintenance and breakdown worry because it is lubricated for life at the factory.

Let a Kodak Audio-Visual dealer demonstrate; then choose with your eyes and ears wide open. Or write for details. No obligation either way.

Before you choose any projector, get all the facts about the new Model Kodoscope Pageant Sound Projector. Send for this free booklet. There's no obligation.

### EASTMAN KODAK COMPANY Dept. 8-V

the screaming otter by the tail so as not to be bitten. The boys fix up a home for "Otty" in an unused hayloft. Kjell is sworn to secrecy. Anders and Kjell sneak food from the dinner table for "Otty." They take "Otty" to the forest and secretly play with him in the snow. On occasions the young fox joins the otter in momentary fun. However, there is "no happiness without heart-ache, no love without anxiety and care." The otter eats a great amount. Anders uses up the money in his piggy bank buying fish at the store. He becomes worried. He is inattentive at school. On the lake he breaks the hard ice of March to fish for "Otty." But fishing becomes less troublesome near the close of winter. Nature once more seems good — until the boys discover a deer that has been killed by the lynx.

Heralded by single drops of water forming on a twig, the thaw bursts forth with its turbulent waters rushing past the ice. With spring at hand "nothing would remain unchanged." The otter becomes restless. The wood grouse court and fight. The plants burst into bloom. When it comes time to gather wood for the May Day fire, Kjell prefers to go along with the country folk rather than fish with Anders. When Anders returns, Kjell has told the secret. Amused people have invaded the hayloft to see the otter. Anders is shocked. Kjell denies telling the secret. Since Anders cannot stand this invasion of privacy, he takes "Otty" to the woods. "Otty" is his only friend who has never let him down. As "Otty" quietly swims in a small pool, Anders makes plans to live forever in the woods with him. After watching a flight of cranes, Anders discovers that "Otty" is gone.

Anders is in no mood for the May Day festival. Kjell, too, is downcast. But when Kjell asks Anders for forgiveness, neither can feel sad any longer. Here fades the memory of Anders' youth "when tears were so close to laughter."

### APPRAISAL

Those who have seen *The Great Adventure* agree almost unanimously that it is a film of rare beauty. It was awarded an international prize at the Cannes Film Festival. Its initial theatrical run in New York lasted a month. The *New York Times* reviewer declared it a masterpiece that "we will cherish for years and years."

Showings of the film in both 35mm and 16mm indicate the film's appeal to general and adult audiences. *The Great Adventure* is potentially useful in schools which consider the provision of aesthetic experiences for children worthwhile. The extent of use of this film in schools, however, may depend

upon the ingenuity and imagination of persons responsible for film use because two deterrents to classroom use are readily evident: (a) it is too long to fit into the traditional class period, and (b) as an instructional tool the film does not fit easily into the usual compartments of curricular subject matter. The second deterrent would not exist for courses in film and film appreciation and for courses in communication arts which include film with literature. Thus, on the high school level, the film will probably be used for special convocations (which would likely include family audiences) and special meetings of extra-curricular activities, such as film societies, camera clubs, and possibly nature and conservation clubs.

In *The Great Adventure* younger children are provided with a story film and with fascinatingly real portrayals of animal life. Some children may find identification with Anders or Kjell. A rural child from the Northern United States will not find this Swedish setting strange. Elementary teachers and children who have seen Sucksdorff's short films which were commissioned by Encyclopaedia Britannica Films (*The Story of a Baby Fox*, *The Hunter and the Forest*, and *A Tale of the Fjords*) will already have some idea of the film maker's style.

The film is highly recommended for study and analysis by film societies and college students of cinema. First, they might note the film's integrity. In showing things as they really are — nature's ugliness as well as its beauty is portrayed. A fox is a fox and an otter is an otter. Animals are not personified "characters" out of *Uncle Remus* or *Beaver Valley*.

*The Great Adventure* answers any diehards who may insist that the development of film as an art form halted with the coming of sound. There are few examples of a more complete integration of filmic elements. Exceptionally fine nature photography and indigenous sound are skillfully wedded to a sensitive and descriptive musical score which was composed to Sucksdorff's exacting specifications. The translation of Sucksdorff's personally written commentary has the quality of poetry. The way in which this commentary is sparingly used is an object lesson for film makers.

The skill with which continuity is maintained, especially during changes of mood, is worth studied observation. The film furnishes interesting examples of the use of the subjective camera. The camera becomes the racing wounded-vixen until the very moment of her death. It becomes the otter looking up at the fisherman, the stumbling fisherman chasing the otter, the cranes looking down at the earth during flight. Notable examples of indirection are to be found in this film. For instance, the lynx is not shown pouncing upon the ensnared dog. Having seen the waiting lynx and then the tangled chain of the dog, one only needs to see the startled reactions of the owl and the hare while he hears the anguished cries of the dog. Montage is used to indicate the change of seasons and to give the feeling of Anders' anxiety during the nightmare sequence.

Cinema students and critics will no doubt take notice of the fact that Sucksdorff personally wrote, directed, photographed, and edited this film. He also acted the part of the father of Anders and Kjell (the part of Kjell is played by Sucksdorff's own son whose real name is also Kjell). The assistant producer and sound director was Nils Gustaf Orn. Lars Erik Larsson composed the musical score.

By the time Sucksdorff was thirty-four, he had already produced 36 short films, many with international distribution such as *Shadows on the Snow* and *Symphony of a City*. Now he is thirty-nine, the age Robert Flaherty began his second film (after completing *Nanook of the North* the year before). Let us hope for many more achievements of the master film artist who in many ways is Flaherty's successor.

—Ledford Carter

## MILK (Second Edition)

(Encyclopaedia Britannica Films, Wilmette, Illinois) 11 minutes, 16mm, sound, black and white, 1956. \$50. Teacher's guide available.

### DESCRIPTION

This revised edition of the film, *Milk*, shows the handling of milk, the making of milk products, and finally the distribution and consumption. It covers dairy activities on both extremely modernized and less modernized farms.

The film opens with a sequence showing a pioneer American family traveling westward in an ox-drawn wagon. Tethered to the wagon is one of the family's most highly prized possessions—their cow. The narrator explains that even in pioneer days, milk

## Editing as Pro's do it . . . . . . on an Amateur's Budget!

The really creative part of making movies is rearranging scenes and sequences into a smooth, interesting show. But you need the right tools to help your skill and judgment.

The **CRAIG PROJECTO-EDITOR** with its brilliant 3¼" by 4¼" screen, Master Splicer, 400-ft. capacity rewinds, frame marker and focusing and framing adjustments is just right for the job whether you use 8mm or 16mm, color or black and white, sound or silent. *This* way you see what you're doing when you cut and splice.

First you trim out the unneeded ends and leads and not by guessing but at *exactly* the *right* frame. You separate the scenes taken at different times of different subjects and with various camera positions and angles. You put related scenes together and distracting ones where they belong. Finally you splice your scenes and sequences into an entertaining show that will hold your audiences.

Old prints with damaged frames or out-of-date scenes can be salvaged and used with your new productions. You cut out what you don't want and permanently splice the good pictures, with new or old prints, to modernize your work. On the **CRAIG PROJECTO-EDITOR** you can even show whole films on a desk without the trouble of setting up a projector and screen.

The **PROJECTO-EDITOR**'s hooded screen lets you view comfortably in a lighted room. Its dual cooling system lets you study single frames indefinitely without damaging your film. The film threads *straight* on a stainless steel guide that doesn't touch the pictures. The Craig Master Splicer and Craig #7 film cement weld smooth splices stronger than the film itself. Folds into its own handsome carrying case 14½" by 8½" by 8½", weighs 10½ lbs. and costs only \$79.50 for either the 8mm or 16mm model. See it and try it at your camera dealer's.

THE **KALART** COMPANY, INC.  
PLAINVILLE, CONNECTICUT

*Producers of Precision Photographic Products since 1930:  
Flash Units, Rangefinders, KALART and CRAIG Movie Editing  
Equipment, VICTOR 16mm Sound Equipment*

was considered to be the most nearly perfect food.

After the family settles on their new farm, the two small children are seen watching eagerly while their father milks the cow. Then a close-up view shows a big earthenware churn in which cream is being churned into butter by hand.

The scene now shifts to a modern dairy farm where an excellent herd of cows is kept. Here the cows stay in a special barn called the loafing parlor when they are not grazing in pasture. At milking time, morning and evening, the cows are brought to another building—the milking parlor. In this barn, the cows are prepared for machine milking. Other scenes show how the warm milk is pumped through glass pipes to refrigerated tanks where it is cooled quickly before it is shipped in cans or in special tank trucks to the dairy plant.

Next laboratory technicians are shown testing milk samples for purity and butterfat content. The milk is traced through the dairy plant, and the homogenizing process is shown and explained. The film shows how the dairy plant is kept spotlessly clean and how the machines and pipes are carefully sterilized daily.

An automatic bottle-washer which can wash and sterilize 12,000 bottles an hour is shown in action, and finally the bottles are shown being filled, capped, and sealed.

The film also shows other milk-handling machinery in operation—a huge dairy churn in which butter is made, a machine which wraps butter automatically, large vats freezing ice cream, an immense container making cottage cheese, and dairy trucks delivering milk and other dairy products to homes and stores.

#### APPRAISAL

As one of a series of basic films on food, clothing, and shelter, this film should be particularly interesting to teachers and to pupils in primary and elementary social studies classes. Good photography and clear narration help to hold interest at a high level throughout the film. The close-up views of the

### Special Church Section in February

The February issue of **EDSCREEN & AVGUIDE** will include an enlarged church section, with articles and reviews of special interest to church users of audio-visuals. The issue will also include the regular features of interest to all audio-visual users in school, church, and community.

cows at milking time and of the baby calves should be especially appealing to youngsters. The film gives an excellent overall view of the many and varied activities which take place in a modern dairy plant. This is a highly informative film and is one that might be used as an introduction before planning a field trip to a dairy or as a culminating activity in a dairy unit of work.

— Pearl Walker Headd

### THE EYE OF THE BEHOLDER

(Stuart Reynolds Productions, 9110 Sunset Boulevard, Los Angeles 46, California) 25 minutes, 16mm, sound, black and white.

#### DESCRIPTION

The thesis that men see largely what they want to see is demonstrated in this dramatization of an episode in the life of an artist, Michael Gerard.

Introductory scenes present a number of examples illustrating the questionable character of man's perceptions: the shell containing the pea is "lost" among the three moving shells; the crown of a top hat, while seeming taller than the brim, has actually the same dimension: pattern of squares is "structured" to contain six or seven cubes; and an ink blot may assume the form of an animal, a man, a tree, or an atomic cloud. All of these cases are used to suggest that man may see all, part, or none of the "truth." The next sequence of the film presents the problem situation to be surveyed—the scene is Michael Gerard's studio where the artist stands menacingly over the apparently lifeless form of a woman on the studio couch, and an easel, paints and brushes, and a long-bladed knife lie scattered on the floor.

The film traces the preceding twelve hours of Michael Gerard's life in terms of the impressions of five different people who have observed his behavior. To the waiter in a bar, Michael is a lady's man who succeeds in an apparently bold, but nevertheless smooth, approach to arrange a meeting the following morning with a strange woman. In support of his judgment,

the waiter confides that he himself knows how to get along. Michael's mother, the next morning, fails to persuade her preoccupied son to have some breakfast before leaving the house and must admit to the viewer that Michael doesn't hear a word she says. To the cab driver, who is brusquely "ordered" to take Michael to his office and is told a number of times en route to "shut up," Michael Gerard is a "hood." Why? Because the cabbie also wears a bulge in his coat that is caused by a revolver strapped to his chest. The proprietor of the office building, Mr. Coppermeyer, with his seemingly harmless greeting of "Good morning," arouses in Michael an unsolicited discourse on the relative character of things and people, ending with the claim that the man in Michael "does not exist." Since several cases of lunacy in his family make Coppermeyer an "expert" in such things, he confidently labels Gerard a "lunatic." The scrub-woman, generally obsessed with fear and suspicion, recognizes in Michael's cold look that morning something ominous and foreboding. Accordingly, she sees "murder" when the pleading of a woman, a scream, and a crash bring her upon the scene in Michael's studio.

For the "truth," the film depicts the same developments through Michael's "eyes." The artist is striving to paint a "Twentieth Century Madonna" and thus seeks a woman to act as his inspiration and his subject. Upon the suggestion of his lady companion who is actively sympathetic to this aspiration, Gerard goes to a bar one evening and succeeds in finding and gaining the cooperation of his "Madonna." The inattention of his mother to his preoccupation and excitement the following morning convinces Michael that she hadn't heard a word he said. En route to his studio Michael makes repeated sketches on a pad in preparation for the sitting. The persistent and disturbing monologue of the cab driver evokes firm but polite appeals from Michael to "please keep quiet." Likewise, Michael's contact with Mr. Coppermeyer takes more the form of a friendly parrying of remarks rather than an aggressive tirade against the man's common-sense realism. For the scrub-woman who sees sinister forebodings in

his demeanor, Michael really intended a "smile."

Once in his studio, Michael hastily prepares for the arrival of his prospective sitter. To his utter dismay and disillusionment he finds her in a drunken stupor following a night of partying and, in a fit of anger, repels her feminine advances and throws her upon the studio couch. The scrubwoman's entry at this point brings from her a cry of "Murder!" and a call for the "Police." Upon leaving the studio the rejected woman characterizes Michael Gerard as a "square" while Michael observes rather dejectedly, "My Madonna."

#### EVALUATION

In a dramatized treatment of a basic human phenomenon, the film deals informally, yet convincingly, with the problem of accurately perceiving the behavior and motives of others. Perceptual distortion has its roots in what is known as "projection," a process whereby one attributes to others behavioral tendencies manifest in one's own personality. In this regard the film portrays rather neatly the relationship between the accusations, labels, and claims offered by the reporting observers and their own respective behaviors and motives. Hence, the film could be used not only to improve understanding of the nature of the perceptive process but also to induce restraint in ascertaining prematurely the character of human motives and behavior. High school classes, teachers in training, college classes in the behavioral sciences as well as adult groups would find this film informative, stimulating and entertaining. Some feeling prevailed among the previewing group that the five versions of Michael's behavior contrast excessively with the "true" description as provided by Gerard himself, thus making the treatment somewhat unfair to the viewer. While some of the versions appear to differ more than seems necessary to illustrate the point, these differences would not be conspicuous if the viewer were sensitized beforehand to the necessity of shifting perspectives throughout the showing among the five orientations. The latter are designed to reflect the impact of an individual's private expectations, desires, attitudes, and fears upon his perceptions of people and events around him. In illustrating this impact the film does exceedingly well. Almost as a happy afterthought, the film reinforces its thesis when the private hopes and expectations of both key actors were rudely shaken in their realization that each entertained distorted perceptions of the other's intentions.

## AV Reminiscing

Continued from page 25

camera and went to work. The outdoor shots were relatively easy, but "photo floods" were not yet available. The Mining Company came to the rescue. They were using Kleig arc lights in their underground operations, so we brought those into the classroom and the library. The last of our pictures we "shot" with a Victor spring driven mechanism that would expose about thirty feet of film without cranking. We added a set of Haldorson Twin arcs with Pyrex glass shields to protect the actors from the sparks of the arcs. This equipment was acquired during the Christmas vacation which left us about six weeks to complete the three 400-foot subjects in time for the Boston meeting.

From the DeVry Company we rented a series of films in nature study and from the Dudley Company, a series of social studies films. With these films was supplied a very comprehensive lesson plan and suggested follow-up activities. And then in 1928 . . . came Paul Vernor with six 16mm silent Eastman Classroom Films which we could purchase for \$35 each. In anticipation of sound on film, the price dropped to \$24. Now we could really build a library of our own.

We owe a debt of gratitude to these pioneer film and equipment salesmen. They brought us not only the new things but were the only reliable source of information on what other school systems were doing with this new aid to instruction.

## 1930: Full-time VE Director

In 1930, my superintendent thought that we should have a full-time Director of Visual Education. In September, 1930, I was excused from all class work and was free to develop the program. By reason of the new assignment, I was sent to the Detroit meeting of the AASA in February, 1931. This was my first direct contact with Visual Education programs of other systems. This past spring I was again privileged to attend a DAVI meeting in Detroit. It was very interesting to note the changes in the 25 years.

One reason for attending the Detroit meeting in 1931 was to try and find the answer to the question of illumination. Our SMPE people were sure that it was simply impossible to get enough light through a 16mm aperture to give a satisfactory image on the screen. The formal programs did not deal with such problems, but we got our answer in the exhibit section. After closing time one night, the exhibitors set up their projectors in a dark corner

and we experimented to see which machine would produce the brightest light. Ernie Schroeder from Davenport outshone all others. He urged an RCA Victor with Rheostat, and, I suppose, overloaded the lamp filament; but it stood up. I purchased a Victor then, which I still have.

## 1931: The Darkening Problem

Our illumination problem was solved; but what about darkening? The High School Auditorium was fitted with drapes, the lecture rooms for High School and Junior College were fitted with dark draw shades and light flanges; but how could we darken classrooms?

Contrary to rumor, Hibbing did not have surplus tax money, gold door knobs, etc., on the school houses! The school budget could not stand the strain of purchasing draw curtains for classrooms in 26 buildings, so we took the ordinary window shades to the paint shop and sprayed them with blackboard dressing!

In the basement rooms we used sections of fibre-base chalk boards salvaged from the portable buildings or abandoned mining location schools. One permanent visual room in the high school was darkened by painting the storm window panes.

The Hibbing first Visual Aids Bulletin, dated January, 1931, contained fifty pages of visual aids; pictures for opaque projection, slides, filmstrips, industrial exhibits and twenty-two 16mm films (fifteen geography subjects and seven in science).

## 1934: Questions & Answers

By 1934 Erpi released some of their science films on Senior High School and Junior College level in 16mm sound. How should we know what projector to buy? Would more films be available in other subjects? Should we rent or buy?

There were no college audio-visual courses in our area nor were there any institutes where the answers might be found, so I traveled during the spring vacation to visit public school systems in Minnesota and Wisconsin and projector factories in Davenport and Chicago.

The craftsmen in the Victor factory were especially considerate of our interest in the various steps in the production of a 16mm sound machine. They showed us how it worked and how to keep it working. Result—we purchased a Victor sound machine, Model 24B. (And we've purchased fifty and recommended many more.)

including an exhibit of all textbooks and educational supplies, files of pamphlets, pictures, recordings, filmstrips, maps, and other aids is a part of the library suite. There is an audio-visual room for preview and storage of equipment.

Another factor in the growth of the program of instructional materials is the performance of many routine tasks which are non-professional in nature. Whether the audio-visual aids, textbooks, and library programs are separate or united, clerical and technical aid must be provided. The size of the school determines the extent of the need for this, but it is a clear economy to employ workers at nominal wages for routine jobs that too often are performed by professionally trained employees.

As for staffing the instructional materials center, the larger the school, the more numerous are the demands of teachers for service. An instructional materials center in such instances may have a larger staff of professional employees and a proportionately larger number of technical and clerical assistants. These centers may be staffed with both librarians and teachers with audio-visual training. If all the facets of an instructional materials program are to be utilized to the fullest, staff members will need special abilities. One person does not possess, nor can he possess, all the skills and techniques for the fullest fruition of a teaching materials program. Neither can small schools employ a staff varied enough to reach all goals. The library and the librarian offer the smaller schools the fundamentals necessary in the provision of instructional aids, but the larger schools can augment staffs to meet basic needs on a larger scale and to offer additional services.

### The Central Department

Since most schools do not exist as completely separate entities—little islands unto themselves—another echelon of service usually exists—the central department. This office should be the heart of an effective and efficient program of instructional materials. If the teacher can be better served through a one-stop agency in the individual school, the effects of centralization of all instructional materials in headquarters promise much of merit. Critics of centralization maintain that unification of the various divisions of teaching materials is a superficial one, and that libraries, audio-visual centers, radio stations, and textbook divisions are still headed by specialists in these areas and that to unify them merely results

in the creation of a paper empire. If this is true, the superficiality is the result of poor leadership (and no program, whether in the school or central headquarters, will be any better than the kind of leadership provided).

In a system large enough to afford specialists in the diverse ramifications of an instructional materials program, it is well that each section of the instructional materials department be headed by the specialist best trained in his particular area. In the school program as in the community health program there is the general practitioner. In the over-all instructional materials program, degrees of specialization are not only good; they are to be encouraged. What is different about the functioning department of instructional materials is that the exercise of final authority should rest with a general educator, the head of the department, who is able to stimulate growth in the various aspects of the program and provide a healthy balance in the distribution of these results in the schools. This department head ought to be a person trained and cognizant of the fundamental job of the school and able to apply the tools that are needed for the most successful program. His section heads are key consultants in each phase of the total program of instructional materials. The end results of such unification are the provision of instructional tools in a more even flow, the expenditure of time and money in a more equitable balance, and a reasonable uniformity of instructional services in an increasingly complex welter of administration and supervision.

These observations on the centralization of instructional materials and the methods of utilizing human resources in the field have been couched in terms of what could be and in some few instances of what does exist. To return for a moment to reflect on the fact that each instructional materials program is unique, I would like to add that I feel sure that for a long time to come there will be many separate departments of audio-visual materials and separate library departments. This is the way it has been and the way it will be. These separate departments can cooperate and do cooperate to achieve the results that the unified instructional materials program aims to do. Those who feel that centralized instructional materials programs are to be preferred that way because they believe unity brings greater efficiency, economy and non-duplication of effort. They believe that teachers can be better served through fewer and less-confusing channels.

# DO YOU HAVE A "DEAD"

# SUBJECT?

Even if you have a "dead" subject, you can bring it to life with the Pride Electric Pointer.

Now, we don't claim to raise any old Pharaohs out of their pyramids, but we do guarantee that more life can be brought to any lecture platform with the use of the Pride Electric Pointer.

Pride Electric Pointer is a small, lightweight, entirely portable instrument in the form of a flashlight that projects an arrow-shaped image → (not just a flashlight beam) up to a distance of 98 feet. Aside from telescoping your arm or making a 90-yard dash in a panting split second, this is the simplest medium available to you for focusing audience attention on any visual display.

Some people use old-fashioned wooden pointers; and there have been optical pointers in the past, but they were surfeited with encumbrances—long wires, transformers—which served to tie down and hinder the full expression and ease of the lecturer. The unique arrow shape is designed to eliminate any possible diffusion of shape or image. Powered with two ordinary flashlight batteries, Pride Electric Pointer has no transformers, no wires, no burn-outs. It obviates crawling on all fours around a lecture room in search of plugs or outlets.

Now, the regular price of the Pride Electric Pointer is \$18.45, but during this limited 15-day introductory offer, it's yours for only \$14.76 plus postage and c.o.d. fee; or enclose check with your order and we pay postage. Take advantage of this 20% professional discount and order today. If you are not completely satisfied after 10 days' examination, return your Pride Electric Pointer for purchase price refund.

## How To Get Recordings Into Schools

Aggressive salesmanship is needed — needed badly — if school personnel are to be made aware of the vast potential of recordings in instruction. Record companies have not, and perhaps cannot, undertake this action. The local record dealers cannot afford to keep a schools specialist in the field, nor can they afford to divert other staff members to the school's needs. Finally, it seems unlikely that record dealers will soon be able to assign a schools specialist to the introduction of recordings of instructional merit to the schools and to divert him to other activities so that his total activity will be economically sound.

Is there a solution to this problem? We've been searching for one for a very long time. Is the "record of the month" idea especially tailored for school needs practical? We believe it is — but that the development will be slow. Is the solution to be found through the activities of the audio-visual specialists selling audio-visual materials and equipment to schools? Perhaps, in part, but certainly not exclusively. Is the solution to be found through an expanding audience for this and similar columns? Although we sense an expanding interest through the years, our contribution to the solution of this problem through this column cannot be large.

But there must be other solutions. We have suggested from time to time that record manufacturers prepare and distribute samples and excerpts from which schools could make an appropriate selection. We've called it an "audio catalogue." Expense here is the great deterrent. We have tried to interest local institutions in the development of loan libraries of records so that schools might be served. There are a few such operations with which we are acquainted — but all complain bitterly of mistreatment of recordings by users. Recordings are returned scratched and injured beyond repair.

There is dust (chalk dust) in the grooves and thumb and finger prints adorn the records which are thus returned. There are valiant efforts to establish local, state and even a national tape recordings library. And this is part of the answer — but not the whole answer. There is no whole answer — and not all of the parts have been explored.

We were amazed some weeks ago when we visited several teachers colleges and high schools and discovered (a) that the record collections were widely dispersed through several departments (and therefore available to relatively few teachers) and that the library collections were woefully weak. We carried with us a mixed collection of records for English instruction. Some were designed for work in remedial speech, others for literature. Some were intended for the grades, others for adult students. This random collection included some which are good (in

our opinion) and some which are . . . not! The variety was not infinite — but the collection was broad.

There was just one condition surrounding the visits. We asked the audio-visual supervisors to invite (but *not* demand) the English faculties to come to a specified room at a convenient time to hear whatever they chose to hear. There was no coercion on the faculties, but they were supplied with a list of the records before the demonstration. In private compact with the audio-visual supervisor, it was agreed that money would be made available for the purchase of any records selected. I cannot report either on quantities or varieties selected — and I do not expect information on this aspect because selling recordings to schools is not my responsibility. But this I can report — one of the audio-visual supervisors good-naturedly told me that the one day demonstration had “knocked the audio-visual budget galley-west.” He added that he was delighted that he had had such an opportunity to introduce recorded materials to his staff and colleagues with the assistance of a disinterested person who dealt in ideas and not materials. In his opinion the total audio-visual program of the school will be markedly strengthened through the introduction of recorded materials in the instructional program. And, he added, so will the instructional program of the

## HEIDENKAMP BIRD FILMS

Producer & Distributor HEIDENKAMP NATURE PICTURES  
538 Glen Arden Drive Pittsburgh 8, Pa.

Eastern Representative ALBERTSEN DISTRIBUTING CO.  
1105 Park Avenue New York 28, N. Y.

school — and thus the progress of the students will be enhanced.

If the improvement of instruction can thus be served — so too are my primary interests. If any reader wants a copy of the list of recordings I carried to these several institutions I'll be happy to supply it. Please address me at 36 Holmes Dale, Albany 3, N.Y.

This experience, compressed into three days, indicates that schools need and want further information on records and demonstrations of them by disinterested educators. Is it possible that, until provision is made for such activities, interest in records will continue to lag? Is this a function which should be supported by the record companies, or can it properly be supported by agencies reliant on tax monies? Is it sufficient for public education authorities that this potentially can improve the quality and variety of instruction and therefore is appropriate as a governmental function? We do not know

the answers but we are willing to open these columns for any discussion you may wish to offer — either pro or con.

### Highlights of “Julius Caesar”

*Julius Caesar*, perennial favorite of junior high school and senior high school English teachers, is available on a single M-G-M disc, number E 3033. The highlights of the play are taken from the soundtrack of the motion picture which starred Marlon Brando (Mark Antony), James Mason (Brutus), John Gielgud (Cassius), Louis Calhern (Julius Caesar), Edmond O'Brien (Casca), Greer Garson (Calpurnia) and Deborah Kerr (Portia). Most assuredly there is place for this long-playing recording in the instructional program. It will be useful in helping young people understand this Shakespearian drama and in permitting them to hear the lines read by actors and actresses well known to them. Certainly, after hearing this recording and following it in the text, as we believe they should, the youngsters will overcome some of their fear of Shakespeare.

Of particular interest to playgoers is Mark Antony's funeral oration, which is read with great skill by Marlon Brando. No essential lines are cut in this section and it alone may be used

If your dealer can't supply you — Order direct from Cousina, Inc., 2107 Ashland Ave., Dept. ES, Toledo 2, Ohio  
**Dealer and Distributor Inquiries Invited.**

to motivate listening to the entire recording and reading the play.

Because "Julius Caesar" is so often the student's introduction to Shakespeare, this recording will be of particular interest to them and to teachers alike. We wish, however, that both "Julius Caesar" and "The Merchant of Venice" were available to schools in uncut recordings so that these plays as well as other of Shakespeare's dramas could be introduced to classes by an aural-oral approach rather than in the traditional straight textbook manner.

## Slides in 3 Minutes!

*Continued from page 22*

instances the slides will make it unnecessary for the teacher to duplicate experimental setups and an undue number of times.

(9) In the television field, the uses are many:

(a) Images recorded from a conventional TV receiver screen may be a source of current maps, charts, and pictures for classroom applications.

(b) Schools and institutions invited to plan and produce educational and public relations programs will find the slide technique a good one for narrated portions of the programs. The 3¼ x 4 size is proper for the Balop projector at the station.

(c) Rear-projected images from Polaroid slides can be used to furnish scenic as well as other visual backgrounds for studio sets.

(10) Dental schools will appreciate the possibilities inherent in using close-ups of oral situation existing prior to therapy, with post-operative slides for comparison and follow-up.

(11) Projected slides of fire drills, and other mass formations and movements can be employed for instructional purposes.

It is not intended to imply that the list above is complete. Personal experimentation will suggest many other ways to use these slides that can be projected on a screen within three minutes of the time the actual image has been photographed.

# Church department

by WILLIAM S. HOCKMAN

## Development of the A-V Idea in the United Church of Canada

By Rev. Anson C. Moorhouse\*

As I become increasingly familiar with the audio-visual development in the various denominations in the United States, I find that the history of the movement in the United Church of Canada has been much the same.

Prior to the union in 1925, the movement had its beginnings in the slide departments of the Methodist, Presbyterian, and Congregational Churches in Canada. Around the turn of the century, pictures projected in a stereopticon became very popular in the churches. The medium was the hand painted glass slide. The sale of projectors was big business. There are many retired ministers who can tell you that they paid their way through college by selling magic lanterns. In fact, the occasional enterprising student was able to afford a side trip to Europe in addition.

The projectors of this era were well named "magic lanterns." There was a great deal of glamour and excitement in seeing a big picture projected on a cotton sheet. Some may still be able to remember the excitement stirred up in a town as word travelled on the grapevine that they were going to have "pi-churs in the church." The mere showing of pictures would fill the church! It is important to know this for I think it was one of the contributing factors to the *misuse* of audio-visuals in our churches three decades later.

When you hear of the number of artists employed by church slide departments during the first two and a half decades of the century—some even imported from Europe especially for the purpose—you begin to realize the proportions of this business at the end of the gaslight era. By the '30's the demand for the glass slide had definitely fallen. Those close to the industry may have connected this with an

economic slump. The plain fact is that with the increase in professional quality of photography—still and motion picture—the church pictures didn't keep pace. A new style of telling a story was becoming popular in the motion picture houses. With the exciting addition of sound to the pictures that

moved, the transfer of glamour from church pictures was complete.

This doesn't mean that pictures were no longer used in our church. There were some who always had used the picture to communicate information. These persons still worked on, using the glass slides that were available, and

any other picture media that would fulfill their purposes. In reality, the audio-visual instrument was more effective in the hands of these users than it had been generally in the gaslight era. It came to be known as a teaching instrument. This was an excellent preparation for a new era in audio-visuals when films, filmstrips, records and tapes would be commonly used in the church.

The factors that affected us in the decade from '35 to '45 were:

A. The standardization of 16mm film and its acceptance as the non-theatrical medium;

B. The advent of 35mm color film and natural color transparencies, together with a lens refinement that

made it possible to copy the 35mm transparency on the single filmstrip;

C. The war-time teaching program involving audio-visuals with the emphasis on idea and information communication;

D. The improvement in recording of sound on records through the electrical processes, and the subsequent development of magnetic tapes;

E. The professional refinements in scripting for 35mm filmstrips and 16mm motion picture productions. The days are still not too far distant when producers of so-called audio-visual materials expressed themselves in words, and then hung them on pictures, hoping thereby to make a visual instrument.

General practice in the use of audio-visuals among denominations in North America is much the same. Our church is no exception. One point of difference perhaps has been the establishment of a studio — Berkeley Studio in Toronto — for the production of radio and TV programs, motion picture productions, filmstrips, records, and tapes. Radio programs are produced, duplicated and sent out from the studio to radio stations. Television programs are filmed on stage and location, and after duplication, sent out to TV stations. Motion pictures, filmstrips, tapes and records are produced and deposited in the Departmental Library for distribution.

The studio is directed by a new board in our church known as "Information and Stewardship." This board is charged with the responsibilities of informing our constituency on the total mission of the church and of establishing good relations with information and communication organizations outside the church. It produces and distributes publications and audio-visuals on a service basis. It is the responsibility of the board to see that packaged information is used in the most effective and efficient ways. This makes the distribution and cultivation in use of audio-visuals as much a departmental responsibility as production. Our practice of distributing materials from the department is, I believe, another point of difference from many other denominations.

There are certain advantages in a church's having its own production center for audio-visual materials. The delivery of her message is one of the prime responsibilities of the church. The studio makes it possible for us to search for new ways and means of articulating the message, and at the same time seek to avoid styles that tend to type producers. Furthermore, we can help meet a responsibility for Stewardship. Talented young folk can find an opportunity for expressing themselves within the church's production organization. Otherwise, they would have to look to outside agencies for this expression. Finally, like consecrated effort on mission fields, consecrated effort within the studio has brought costs of production within reach of our own church's limited purse. The resulting increased volume of produced material has made the church more vocal.

## NEW EQUIPMENT

The following announcements are based on information supplied by manufacturers and distributors. The manufacturer or distributor is indicated at the beginning of each item. Addresses are given in the Index to Primary Sources at the end of this department. For more information about new equipment, use the Service Coupon in this section.

### CAMERAS & ACCESSORIES

#### Amplex PFI (B) Baseless Flashbulbs.

Fits any bayonet-base flashgun through the use of a simple, inexpensive adapter. Available in clear or blue, it is a medium-peaking lamp with a peak duration of 18-20 milliseconds. Output of 7500 lumens. 8 for 49c.

For more information circle 101 on coupon

#### Heitz Dix 35mm Camera \$69.50.

Rapid-winding lever advances film, cocks shutter, and counts exposures; synchro-compur shutter has speeds 1-1/500, B; synchronized with all flash bulbs; viewfinders match wide-angle, normal, and telephoto lenses. Supplied with 50mm f:3.5 Westor lens; seven other lenses available. One size optical glass filters and lens shade fits all lenses.

For more information circle 102 on coupon

#### Riken 35mm Camera \$69.95.

Single-stroke trigger for automatic film transport and rapid-action sequence shooting; 45mm f:2.8 lens; Seikosha MFX synchronized shutter (1-1/500th & B) with double exposure prevention; double lever fingertip focusing for right and left-handed persons; rapid re-wind crank. Leather case with detachable hood available at \$10.

For more information circle 103 on coupon

Aljac Case & Viewer

#### Standard Praktica 35mm Camera

\$149.50. The internally coupled automatic diaphragm permits focusing at full aperture for maximum visibility on the ground-glass. Constructed of die-cast aluminum; 12 shutter speeds from 1/2 to 1/500th & B; synchronized for flash at 1/40th. Available with either Jenio 50mm f:2.8 or 50mm f:2.8 Westanor lenses.

For more information circle 104 on coupon

#### Willaughbys Eumig 8mm Electric Movie

Camera \$69.50 less batteries. Operates on four penlight batteries — enough for ten rolls of film. Camera is equipped with fixed focus f:2.8 lens; single frame feature. Case \$8.95. Other accessories available.

For more information circle 105 on coupon

### PROJECTION EQUIPMENT

#### Aljac Carrying Case for Filmstrip Viewer

\$2.60. Made of durable imported fibre-board to blend with the deep green

crackle finish of the viewer. Space for storage of four filmstrip cans.

For more information circle 106 on coupon

#### AO Micro Opaque Reader.

Designed for versatility and high speed, it will accept every known type of card with micro data on it. Utilizes an opaque, rather than a translucent, viewing screen for greater eye-reading comfort. Three interchangeable objectives (23X, 20X, 15X), cast steel frame, fan cooling, knurled focusing knob, screen 11" x 13" at 15-degree viewing angle, finger tip switch — foot switch available for photocopy timing, weighs 23 lbs.

For more information circle 107 on coupon

#### Benx Aud-O-Scape Automatic Tape Pro-

jector. Slide or strip film is automatically advanced by inaudible pulse on magnetic tape — tape reproducer and projector incorporated in one assembly. Handles 45 minutes of material; 300 or 500 watt lamps, 3"-5"-7" lens, 5" removable speaker, 3.75 tape speed, dual track. \$273.75. Also available with tape recording feature which makes possible mixing of microphone, phono and inaudible pulse on controlling tape. \$315.

For more information circle 108 on coupon

#### Dexter Filmsort Microfilm Reader.

Will also make large prints by direct projection of film image onto photocopying paper. The Examiner handles aperture cards (the Filmsort system of mounting individual frames of microfilm in standard file cards or punched cards) or jacket cards (strips of microfilm housed in acetate or paper jackets). 14" x 14" viewing and printing screen. Magnification of 15X and 20X with one group of lenses; 24X, 30X,

American Optical Opaque Microreader

## New- SYLVANIA — one of the greatest CERAMIC BLUE TOP development in projection lamp the last decade

### PROJECTION LAMP

#### Brighter

Ceramic Blue Top won't scratch, chip or peel like ordinary painted tops . . . filaments are machine made for brighter pictures.

#### Cooler

Ceramic Blue Top is bonded to the glass . . . improves heat dissipation.

#### Longer Lasting

Cooler operation of Ceramic Blue Tops assures longer lamp life. Another plus: exclusive Sylvania shock absorbers protect filaments in larger lamps from vibration.

Specify Blue Top projection lamps for your projector equipment.

. . . your slides and movies deserve the best!

**Eastman Transparency Viewing Masks** \$2.75 each. For use with the 10 x 10 Kodak Transparency Illuminator, they offer improved viewing of color transparencies by masking out stray light areas and providing a convenient rack for viewing transparencies. Constructed of Royalite plastic in five different models to accommodate twenty 2 x 2 transparencies, nine 2 1/4 x 2 1/4, two 4 x 5, one 5 x 7, one 8 x 10.

For more information circle 110 on coupon  
**Rodiant Multi-Purpose Classroom Screen.** The Du-All is designed for projection in a normally lighted room and far use as a flannel board. An aluminized screen surface is used with flannel backing. Swiv-L Bar adjusts to permit use with tripod floor stand, for hanging from a wall, or to set upon desk or table. Available in sizes 24" x 32", 30" x 40", and 40" x 40".

For more information circle 111 on coupon  
**Roy-Tone Black Beauty Screen.** Cam action swivel automatically swings the case at an angle as it is placed in horizontal position permitting a placement of tripod legs exactly 120 degrees apart for maximum stability. Metal parts in buffed chrome except for satin black enamel case and handle; die-cast end caps and swivel; triangular slot bar; flameproof and mildew proof screen in beaded or matte white at same prices. Available in eight sizes from 30" x 40" to 70" x 70" at prices from \$28.50 to \$58.50. The Royal Scot, starting at \$14.95, and wall screens, starting at \$14, are also available.

For more information circle 112 on coupon  
**ACA Auditorium-Size Color TV Projection** \$4250. Produces pictures up to 4 1/2' x 6' for audiences of approximately 500 persons. Also available is a black-and-white unit which produces a picture 6' x 8'.

For more information circle 113 on coupon  
**Westinghouse 1200-Watt Projection Lamp.** The new blue-top T-12 lamp is nearly two inches shorter than other 1200-watt lamps due to a compact

filament. It is interchangeable with present 1000-watt lamps. The new filament construction was made possible by the development of new techniques of drawing tungsten wire and an exclusive floating bridge. Lamp is available with medium pre-facus base, Bell and Howell base, and DC medium ring for base-up burning.

For more information circle 114 on coupon

**SOUND EQUIPMENT**

**Ampex Console Music System.** Features two-speed tape recorder which reproduces two-track stereophonic tapes and records half-track and reproduces standard half- and full-track tapes; microphone; AM-FM tuner; 3-speed record changer; equalization controls; 2-10 watt amplifiers; two speakers. In hand-rubbed mahogany or bland finish contemporary design \$1470. Same, with stereophonic player and tape recorder with speaker-amplifier only \$1070.

For more information circle 115 on coupon  
**Ampex Tabletop Stereophonic Sound System.** The A121 incorporates the same stereophonic tape recorder as the console model — \$495. Two amplifier-speakers complete the outfit (separately at \$229.50 each) \$895. Accessory microphone \$65.

For more information circle 116 on coupon  
**Ampex Tabletop Monoural Sound System.** The A111 tape recorder-reproducer is \$439.50 less microphone. The single matching A621 amplifier speaker is \$229.50.

For more information circle 117 on coupon  
**Ampex Portable Stereophonic Sound System.** The model A122 places the stereophonic recorder in luggage-type rather than furniture cabinet at \$449.50 less microphone with a weight of 35 lbs. Amplifier-speakers, similarly cased, are available at \$199.50 each. A manual recorder is available at \$395 to which the same amplifier-speakers may be connected.

For more information circle 118 on coupon  
**ACA 4-Speed Magnemite Tape Recorders.** The 610EM has tape speeds of 15-, 7.5-, 3.75-, and 1.87-inches per second while the 610DM has a top speed of 7.5-inches and a slower speed of 15/16" (also 3.75 and 1.87). Measures 7" x 10" 11", weighs 15 lbs. complete with batteries having a life

## Scratches on Film

### Irritate Audiences

Scratches are havens for dirt, and refract light improperly. On the screen, they mar the picture and may distract attention. If on the sound track, they produce offensive crackling.

Fortunately, scratches can almost always be removed — without loss of light, density, color quality, sound quality, or sharpness.

164 NORTH WACKER DRIVE • CHICAGO 6  
TELEPHONE DEARBORN 2-6286

GAINS of remedial reading classes (Elementary) through Keystone Tachistoscopic Training, as high as 75%. →

Similar gains have been reported from studies made with Primary, Secondary, and College groups — the latter ranging from 47% to 210%. REPORTS ON REQUEST.

Thousands of Schools are

## teaching MORE with LESS EFFORT

— with Keystone Tachistoscopic Training. Many studies have shown that children taught reading by Tachistoscopic methods make more rapid progress than children who do not have this training.

Reading rates increased 50% to 75% in a few weeks. Invariably in controlled tests, the experimental groups see much FASTER, MORE ACCURATELY, and TAKE IN MORE WORDS at a glance—far outdistancing the control groups.

No teaching procedure has ever had such unanimous approval from Research and Controlled Experimentation. Reports on these studies will be furnished on request. KEYSTONE VIEW COMPANY, Meadville, Pa.

## KEYSTONE Tachistoscopic Services

— especially effective as aids in REMEDIAL and DEVELOPMENTAL READING, TYPEWRITING, SHORTHAND, BOOKKEEPING, CLERICAL TRAINING, MUSIC, ARITHMETIC.

Berndt-Bach, Inc.  
 Hollywood 38, California

Gentlemen:

We thought you would be interested in a unique Speech-Training technique made possible by the Auricon 16 mm Sound-On-Film Camera.

Your fine Camera is proving to be an extremely valuable Executive Speech-Training "mirror".

We film our people "before" and "after", and the poise and self-assurance your Sound Camera helps them develop, is truly remarkable.

We are very pleased with our Auricon Equipment because of its complete dependability and silent operation. The well-designed controls make filming so easy, the Camera seems to "think for itself".

Our Auricon is the most valuable tool we have discovered for our Professional Speech-Training.

Sincerely,  
*P. C. Mullin*

## 16 mm Sound-On-Film is

# Speech-Training "Mirror"

### for C. C. Mullin & Associates

C. C. Mullin & Associates report that the Auricon 16 mm Sound-On-Film Camera is a unique and valuable "Mirror" for Speech-Training students to see and hear themselves, as others see and hear them.

This new C. C. Mullin filming technique enables the business executive to advance rapidly in professional Speech-Training. Voice, appearance and gestures are faithfully recorded via Talking Pictures filmed under normal room-lighting conditions, with a hidden Auricon Sound Camera! Self-assurance, poise and ability to think on one's feet, develop quickly and more surely with private viewings of "before" and "after" films.

Perhaps you also have a unique and valuable use for an Auricon 16 mm Sound-On-Film Camera? Auricon Equipment is sold with a 30-day money-back guarantee. You must be satisfied!

Please write to Berndt-Bach, Inc., 961 No. Mansfield Ave., Hollywood 38, California or phone HOLLYWOOD 2-0931 for free illustrated Auricon Catalog and prices.

# How Victor Projectors **WON** in "side-by-side" test

... conducted by the Loyal Order of Moose

TEST RESULTS	VICTOR	PROJECTOR A	PROJECTOR B
BEST SOUND	1	3	2
BEST PICTURE	1	3	2
FILMS CHANGED	1	3	2
LAMPS CHANGED	1	3	2
LENSES CHANGED	1	3	2
COOLEST RUNNING	1	3	2
MECHANICAL RESONANCE	2	3	1

Victor 16mm projectors recently won a test that *really* was a test. No experts involved — no laboratory equipment, either. And Victor didn't pay to have the test made — didn't even *know* about it.

Here's what happened. A committee of executives of the Loyal Order of Moose wanted to select the best portable sound motion picture projector available for use by nearly 1800 lodges to show its new 35-minute sound and color motion picture, "A Picture of You," produced by Wilding Picture Productions, Inc.

A Victor Assembly "10" and the two other leading 16mm projectors were in the test. The Victor showed up so well against the other projectors that members of the committee first thought the difference was in the print. The prints were changed. Still *Victor was far ahead* of the other projectors. Because the Victor picture was so much brighter, one of the committee thought there might be a difference in the lamp. Lamps were interchanged. Still *Victor came out way ahead*. Then lenses were changed. Again *Victor was on top*. And that's why officials of the Moose Fraternity — not experts, but typical users — selected the Victor projector for use by its lodges throughout North America.

Whatever your needs in 16mm motion picture projection, Victor has the equipment for you. Send for literature today.

# DU PONT INTRODUCES

## TONTINE<sup>®</sup> flame-resistant vinyl drapery material for darkening and decorating classrooms

Now you can specify an opaque drapery material that complements the décor of rooms used for audio-visual work. "Tontine" flame-resistant vinyl drapery material comes in a selection of attractive patterns and colors on its textured side (see diagram) and in neutral beige on the smooth side facing the window. Soft and pliable, drapes of this new fabric gracefully draw up into minimum space after use. And there's no "boardiness" in low temperatures, or "tackiness" in high.

### EXCELLENT SERVICE ADVANTAGES

Although Du Pont "Tontine" is of a weight and softness designed to drape gracefully over large expanses, it withstands rough handling and possesses balanced resistance to deterioration, discoloration, shrinking and stretching. Its flame-resistant characteristic is equal

to that of "Tontine" triplex window shade cloth, which has passed every governmental test it has undergone. For free samples and specifications, mail coupon below.

Cross section of "Tontine" drapery material

Base fabric is high-grade cotton, coated with virgin vinyl resins formulated to impart permanent flame resistance. Black pigmented vinyl gives opacity. Vinyl coat on one side has embossed textile design.

## Coronet Films

CORONET BUILDING • CHICAGO 1, ILLINOIS

The six new films described below continue Coronet's proud tradition as the leading producer of the finest in educational motion pictures. Each will fill a long felt need in its area . . . will increase the effectiveness of classroom instruction.

### FOR HIGH SCHOOLS

#### Understanding Our Universe (1 reel)

The solar system, the Milky Way, and countless other galaxies and nebulae that extend millions of light years into space are the subject of this film. How man has learned about the universe from ancient times to the present day is also discussed.

#### United States Expansion: The Louisiana Purchase (1 1/4 reels)

The fourth in Coronet's U. S. Expansion series, this film depicts the history of the Louisiana territory in relation to the westward movement. The background of the purchase, its exploration and its settlement are visualized through re-enactment, map animation and authentic sites.

### FOR THE INTERMEDIATE GRADES

#### Indonesia: The Land and the People (1 1/4 reels)

Against the background of a people building a new nation, this film surveys the geography and history of Indonesia. Key phrases—"west to east," "tradition," "treasure house," and "transition"—increase understanding of this Asiatic republic.

#### Southeast Asia: Lands and Peoples (1 1/4 reels)

This film places emphasis on four countries—Burma, Thailand, Malaya, and Indochina—and shows their importance as sources for vital world products. A close look at a Thailand farm family gives an excellent picture of the people in this region of the world.

### FOR THE PRIMARY GRADES

#### A Boy of the Netherlands (1 reel)

On a barge trip from his farm home to Amsterdam, Willem shares the life of the barge family and enjoys the sights of old and new Holland along the canal.

#### How Weather Helps Us (1 reel)

Reviewing the weather that accompanies the changing seasons, this film shows how rain, snow, sun and wind help people, plants and animals. Various types of clouds indicating changes in the weather are identified.

Each of these 16mm sound motion pictures is available in true, natural color or black-and-white.

### CORONET FILMS

# "TEACHERS' PET"

## ...the new Flo-master felt tip pen

Teachers who use this all-purpose felt-tipped pen for visual aid and drawing projects often wonder how they ever got along without it. The Flo-master is a truly universal writing tool ... for paper, wood, glass, metal, cloth, rubber and even plastics. Whether you want to make visual aids, charts, graphs, maps, posters or flash cards ... or art or lettering, your Flo-master is always ready for instant action — and no clean-

up afterwards!

✓ Art	✓ Slim, trim Flo-master Pens have interchangeable tips, use brilliant instant drying Flo-master inks in eight standard colors, including black. Individual Flo-master Pens are available from your school supply, art, or stationery center at prices from \$3. Flo-master colorcraft sets, equal to 4 complete sets in 4 colors, are designed especially for Art and Elementary School Teachers. Ideal for supply room.	✓ Graphs
✓ Charts		✓ Posters
✓ Flash cards		✓ Visual aids

Get your free copy of the Flo-master School Bulletin showing time-and-money-saving ways to ease your work load with this handy felt-tipped pen. Write to Cushman & Denison Mfg. Co., 625 Eighth Ave., New York 18, N. Y.

VISUAL AIDS CAN BE COSTLY BUT NOT WITH A "DO-IT-YOURSELF" FLO-MASTER

## On the SCREEN

### Cover: Pro & Con

Cecil B. DeMille's theatrical motion picture *The Ten Commandments* has been called many things. Clergymen and lay critics alike have praised it to the skies. Clergymen and lay critics have damned it to — well, you know where. Everywhere it is shown, people pack the theaters.

Whatever it is or isn't, it is this for sure: a stupendous symbol of the marriage of motion picture and Scripture. For some it may also serve as a symbol of the great historic contributions that theatrical films have made to the development of the educational use of motion pictures in churches. As such, it seemed to us appropriate on the cover of this February issue with its religious emphasis (see church section beginning on page 78).

### Questions & Answers

Can an audio-visual center effectively serve the whole community? See page 70.

Do college libraries need AV materials? See page 74.

Can you recommend an inexpensive, not-too-long, easy-to-read book that will especially help people in churches and community organizations use audio-visual materials? See page 76.

Can you recommend filmstrips helpful in teaching American history? See page 72.

How about recordings for language teaching? See page 94.

Can you recommend some outstanding motion pictures for school and community use? See page 88.

How can I keep up to date on new films, filmstrips, recordings and other audio-visual materials? See page 100.

### D.C. & N.Y.

Those of you who don't always read the Conference Calendar may need this special reminder about two AV conferences coming up. School people will want to attend the Department of Audio-Visual Instruction convention March 3-6 in Washington, D.C. — Sheraton Park Hotel.

All AV users and enthusiasts, whatever the area of their work, should be interested in the Third Annual American Film Assembly at the Statler Hotel in New York City, April 22-26. As in past years it will include the Golden Reel Film Festival and the Sound Slidefilm Conference and Competition. For details, write the Film Council of America, 614 Davis St., Evanston, Illinois.

### How to Read Educational Writing

"Outstanding conference speakers include . . ." — They were all we could get — at least the only ones who could pay their own transportation.

"The most pressing problem in education . . ." The problem the writer is writing about.

"Experimental studies on this question are being conducted across the land . . ." — One study is going on at the University of Vermont, another at the University of Southern California.

"Everywhere people are becoming convinced of the importance of audio-visual methods of teaching . . ." — Audio-visual directors and coordinators are all convinced.

(With thanks in part to the EdPress Newsletter!) — JNS

Send letters to EdSCREEN & AVGUIDE, 2000 Lincoln Park West, Chicago 14

## December Reactions

*Editor:* Just wanted to say . . . your December 1956 issue of EdSCREEN is the best copy that has come to my desk since I have been receiving same . . .

Thanks for the good articles by Mr. Hockman. He has a keen observation point of view in your Church Department (and that, of course, is my field, although we have a kindergarten and first grade making up our Elementary School). I liked the Grassell article on the flannel board as well as the article on Tape Recording and Sound Advice by Bildersee . . .

*Ray W. McClung*

Minister Music-Education  
Second Baptist Church  
Hot Springs, Arkansas

*Editor:* We are, of course, very pleased to read Wayne Howell's flattering review of our film *How to Take a Test* in your December issue (page 526). Due to a typographical error, the price of the film is given incorrectly as \$150. It really isn't that expensive; just the usual \$50.

*Godfrey Elliott*

President, Young America Films  
18 E. 41st St., New York 17, N. Y.

should be in constant consultation one with the other. Instructional materials cover both fields and one cannot see it in any other way when he is charged with both jobs in the smaller systems.

I suggest that the writer investigate his own situation more carefully, and he will find that a librarian is much more than a glorified clerk. (Some people would have an AV coordinator no more than a delivery boy.) . . . Let us by all means go to the North Central and legislate for standards for AV that will be adequate . . . This (not tearing down the library) is our task, and it will not be done overnight. Many of us remember well when a library was unheard of in a school . . . I could not be more in agreement, as you can see, with your fine editorial which appeared in the same issue as the letter. Let's see that we have the materials to do the job by working together. Each has its place in the curriculum.

*J. Coleman*

AV Coordinator & Librarian  
Martinsville Community Unit Schools  
Martinsville, Illinois

## Picture with a Purpose

*Editor:* If additional copies of this issue are available (Vol. 35, No. 10, with the cover picture of Mr. Pickwick from "A Charles Dickens Christmas"), I should be very much obliged if you would send me a copy . . . I am interested in this particular number as a Dickens collector . . .

*Theodore Hewitson*

County Public Library  
County of Los Angeles, California

*Editor:* I hope you have been deluged with mail protesting a letter published in the December issue of EdSCREEN (page 529) in which the writer laments the place in the budget, the North Central Standards, and the scope (limited in his mind to checking out books) of the library program in his system. This complaint is then transferred to the library program generally in what I can only consider a reckless manner. The letter seemed to be both short-sighted educationally and founded on a lack of investigation of the facts which could only come from inexperience . . .

Certainly criticism is healthy, but it should be constructive. How can we build our school program by throwing rocks at one another? If there are two people in a system — both a librarian and an AV coordinator — surely these two should be the best of friends. They

"Psst . . . Harvey, these sunglasses don't help much, do they?"

*Editor:* I would like to submit the above cartoon for publication in your magazine. I make no claim to possessing artistic talents but the thought behind the picture is one that is ever present with those concerned with audio-visual instruction. Surely, we all realize the shortcomings of today's schools, both new and old, in providing adequate darkening facilities for projection in the individual classroom. Perhaps we can again emphasize the necessity of such facilities through such a pictorial message.

*George W. Niederhauser*

Audio-Visual Consultant  
Clearstream Avenue School  
Valley Stream, L.I., N.Y.

## FCA Promotes Library Film Circuits

Organization of more public library film circuits is the objective of a new Film Council of America project now in the planning stage.

The growth of library film circuits in the United States has been steady. The idea seems to many to be the best solution for the smaller libraries who may want a film collection but who do not have the budget to purchase more than one or two films a year.

In most of the circuits now operating each library pledges a certain amount each year for the purchase of films and for administrative expense. The largest library in a circuit generally serves as the circuit administrator.

Film selection is done by representatives of the libraries concerned. Films purchased are packaged and circulated, usually each month, to the circuit libraries. When a film has been around a circuit two or three times it is cus-

tomary to retire it to a separate collection where it is available to circuit libraries on a spot booking basis.

Yearly schedules are made so that each library in a circuit will know what films it will have during any given month and can reserve bookings accordingly.

Under the FCA plan libraries which agree to form circuits would be supplied with the films to start them on their first year. Titles would be from the collection used for the FCA Film Preview Center Project.

At the beginning of the program each library in a circuit would receive a package of from five to 10 films from FCA headquarters. After one month each library would forward its package to another library in the circuit according to a predetermined schedule. After the films have been completely around the circuit the last library to have them would return them to the FCA.

The plan differs from the Film Preview Center Project in that the libraries participating could book the films

freely for individual or group program use in their communities.

Libraries forming circuits under the plan would agree, at the end of the first program year, to consider purchasing films on a cooperative basis with each library pledging an annual amount set by agreement within that particular circuit. Circuits not organized as film purchasing operations would be dropped from the project at the end of the first year.

Libraries in circuits which do organize as film purchasing cooperatives would be loaned a second and different package of films for 1957-58.

## New Films from Britain

A showing of "New Films from Britain" was held on Wednesday, December 5, 1956, at the Museum of Modern Art in New York City. Presented by the British Information Services, the showing included the following films:

*Challenge in the Air*—demonstration of Britain's ability in military and civil aircraft as seen at the 1956 Farnborough air show.

*Bloodstock*—pictorial account of the raising of thoroughbreds in Britain and Derby Day at the race track at Newmarket.

*Trooping the Color*—historic ceremony occurring on the Queen's birthday at Whitehall.

*Atomic Achievement*—development of Britain's atomic power for industry, science and medicine.

*Suez in Perspective*—description of the Suez crisis from the British point of view.

*On Such a Night*—sights and sounds at the opera summer festival at Glyndebourne, on the rolling Sussex downs.

## New Home for Scripture

More than 2500 friends and well-wishers attended the dedication and Open House at the new two-acre Scripture Press Building, December 7, 8, and 9, 1956. Civic and religious dignitaries welcomed the Scripture Press to the Wheaton-Glen Ellyn, Illinois, area

(Continued on page 64)

This is a scene from the new British Information Services film "On Such a Night," shown recently in New York City. Above we see "David" thanking "Lady Folconbridge," through whose kindly invention he was able to see the opero. She responds by presenting him with a ticket for a forthcoming performance of "Don Giovanni."

## Versatile new projector shows filmstrips or slides—adapts quickly to sound!

From the makers of Filmosound, here's the latest example of audio-visual *versatility*—Bell & Howell's new Specialist multi-purpose projector. Use it in *four* ways: for filmstrips (single or double frame) or 2x2 slides (manual or semi-automatic). Use it with sound as well! The new Specialist unit fits easily into the DuKane Recordmaster case for sound slides or filmstrips.

Exclusive wind tunnel action keeps the "Multi-Purpose" cooler than any other projector of its type. Another Specialist feature: film take-up chamber that rolls

your film neatly, keeps it safe from dust and scratches.

See it in action! This new Specialist model (only \$94.95) is now being shown by Bell & Howell audio-visual dealers throughout the U. S. For further information and name of your nearest dealer, write Bell & Howell, 7117 McCormick Road, Chicago 45, Illinois.

**Exclusive airflow case:** the key to wind tunnel cooling—air is drawn through the bottom by a 5" fan, greatly reducing temperatures. This advanced design protects film and assures comfortable operation.

**Selector changer (optional) for semi-automatic showing—**a handy tray loading unit for 2x2 slides. Once you've filed your slides in the 30-slide Selectrays, they'll be safely stored, indexed and ready for use.

and assured them of the whole-hearted appreciation the community has for the type of contribution such publications make toward culture and service.

### Coming Conferences

THE 83RD ANNUAL CONVENTION of the American Association of School Administrators will convene in Atlantic City, February 15-20. AASA Executive Secretary Finis Engleman has announced that one of the highlights of the convention will be the first large-scale demonstration of teaching by TV to be given at a major educational meeting. Plans are under way for convention participants to watch, via closed circuit TV, kinescopes of teachers in the actual process of teaching

before the cameras. Monitor sets located in four or five rooms scattered throughout the Atlantic City Auditorium will pick up the pictures, and approximately 100 people in each room will have the opportunity of watching the teaching demonstration simultaneously.

THE ASSOCIATION FOR SUPERVISION AND CURRICULUM DEVELOPMENT will hold its 12th Annual Conference in St. Louis, Mo., March 17-21, with headquarters at the Sheraton-Jefferson and Statler Hotels. The ASCD, a department of the National Education Association, will have as the theme of the meeting, "Education and the Future."

### People & Jobs

JOHN C. KENNAN, formerly SVE vice president and director of sales, has been selected to become president of the Society for Visual Education Inc. W. H. GARVEY, the former president, has resigned to become executive vice president of a nationally known manufacturer of agricultural feed products.

CARL E. LINDGREN is the new art director at Scripture Press, which has recently moved into its new building at Wheaton, Illinois. Mr. Lindgren was formerly display manager for the Charles V. Weise store at Rockford, Illinois, where he won recognition for artistic displays.

McGraw-Hill Book Company announces the appointment of JOSEPH SLEVIN as head of advertising and promotion of its Text-Film and Language Master Departments. Mr. Slevin was formerly associated with British Information Services. He has also acted as producer-director of several independent experimental films.

BEN ODELL has been elected executive vice president of Cathedral Films. This was announced by Dr. JAMES K. FRIEDRICH, president of Cathedral Films at Burbank, California. Mr. Odell has been with this producer of motion pictures and filmstrips for church use since last April.

The appointment of Nobel laureate Dr. GLENN T. SEABORG as senior advisor in the sciences for the Educational Television and Radio Center was announced recently by Dr. H. K. NEWBURN, president, at Ann Arbor, Michigan. Dr. Seaborg is the "star" of the National Educational Television series "The Elements." He will act as senior advisor and consultant to Center program officials in the development of educational television programs in science.

DR. REIGN HADSELL, on leave from his position as associate director of the Audio-Visual Center at Syracuse University, and who is in Iran as audio-visual advisor to the Ministry of Education's Fine Arts Division, has been appointed to a committee to work on curriculum revision for the Iranian teachers' colleges and normal schools. This committee will report to the Ministry of Education on the desired reorganization of teachers' colleges.

MARY MAINWARING is now head of the Audio-Visual Department at Chicago Teachers College.

One good look will tell you...

EVERY

PROJECTOR IS...

*Guaranteed  
for  
a Lifetime*

Many projectors LOOK somewhat alike, in appearance and price — but Viewlex has something extra! Rigidly controlled standards of **QUALITY** carried through every step of manufacturing assure projectors that are trouble free and a delight in operation. **VIEWLEX QUALITY CONTROL** is a precious property — it is the real reason why Viewlex guarantees every Viewlex projector for a lifetime!

## V-4S — V-44S

For single-frame filmstrip. The ideal budget-priced filmstrip projector. Clear, sharp projection; brilliant illumination; simple to operate. Cannot tear film. Model V-4S 150-watt convection cooled. Model V-44S 300-watt motor fan cooled. 2", 3", 5" and 7" focal-length lenses available.

## VIEWLEX VIEWTALK

Plays standard and long-playing records, up to 16" — two permanent needles on twist arm. 33 $\frac{1}{3}$ , 45, or 78 r. p. m. Model WR — 4" x 6" detachable speaker for 150 or 300-watt Viewlex projectors. Model WHD — 6" x 9" detachable speaker for 500-watt projector.

## V-500

For 35mm filmstrip single and double frame, vertical and horizontal pictures. Takes 2" x 2" and bantam slides in any type mount intermixed. New refrigerator cooling. 500 Watt fan cooled. 5 inch F/3.5 Professional lens. Automatic take up reel and optical magnifying pointer. 3, 5, 7, 9, 11 inch lenses available.

## STRIP-O-MATIC

Remote control 35mm filmstrip advance mechanism. Hand-held push-button. Allows complete freedom of movement. Speaker can stand wherever he wishes, or even sit with the audience. For use with all Viewlex filmstrip projectors (illustrated here with V-25C).

## V-1000

For 35mm filmstrips and 2" x 2" slides. 1000 Watt fan cooled. Perfect for auditoriums, large classrooms and wherever unusually large pictures must be projected. The only J.A.N. (Joint Army-Navy) approved projector. F/3.5 Professional lens. 7, 9, 11 inch lenses available.

## V-2C - V-22C - V-25C

For 35mm filmstrip single and double frame, vertical and horizontal pictures, 2x2 and Bantam slides, any type mount. Change from filmstrip to slides in seconds. V2C—150-watt, V-22C—300-watt motor fan cooled. V-25C—500-watt motor fan cooled, 3-5-7-9-11 inch lenses.

# Classroom TV at Fisk

**F**ISK UNIVERSITY, Nashville, Tennessee has inaugurated a closed-circuit instructional television program. Part of an extensive new academic development schedule, the teaching by television over the university's closed-circuit system is designed to improve the quality of instruction and to stimulate scholastic achievement by making its courses more widely available.

The majority of the courses to be televised are of the large enrollment or multi-section variety such as survey courses for freshman students. TV will also be used in small-class situations having lecture demonstrations where minute or microscopic objects are to be observed.

In addition to a completely equipped TV studio, a major innovation will be extensive use of classroom program origination. The unattended classroom TV cameras were developed by and installed with the assistance of the TV equipment manufacturer, General Precision Laboratory of Pleasantville, New York.

The adjoining campus of the Meharry Medical College has also been linked by closed-circuit with the viewing of surgical operations by students, interns and the resident staff especially in mind. Complete program flexibility is achieved through the ability to originate programs at any point in the system's coaxial cable distribution.

Basic equipment for the classroom TV installation consists of four vidicon

cameras and a switching unit for push-button selection to follow classroom action. A total of 28 receivers will be located in ten classrooms and in Study Centers in five residence halls to bring students educational programs which are not a direct part of class assignments. In one of the university's auditoriums, seating 300, a GPL television projection system will throw pictures up to 16 feet in width on a large screen.

Each classroom will be equipped with two 24" receivers to accommodate 25 to 30 students for ideal viewing conditions. A large Chemistry Building classroom will have four receivers to give close-up views of experiments and demonstrations taking place in the front to students seated in the rear portion of the room. Still another receiver will enable students, teachers, and visitors in the Experimental Nursery School to watch the activities and behavior of small children without being seen. A small camera mounted unobtrusively on one of the walls relays the picture information.

With present enrollment at approximately 800, and an anticipated optimum enrollment of 1200 by 1961, no single facility on the campus is large enough to accommodate the entire student body. However, by using all the classrooms and study centers joined by the closed-circuit loops, all the students can see a televised program at the same time.

Dr. Vivion Henderson of the Department of Economics of Fisk University lectures to class in originating room while a much larger number of students receive the instruction simultaneously in other classrooms equipped with television monitors. A student aide in the foreground is ready to switch cameras in following the movement of the professor.

# Books and Brotherhood

You probably can't see that there's any connection between the love of books and Brotherhood Week. There probably isn't any, logically; but the ideas were thrown together when I began thinking about Brotherhood Week and its implications for the use of films and other audio-visual media.

The book-loving part I must explain first. Just the other day I saw it again stated as a worthwhile teaching objective: "To develop in boys and girls a love of books." You've seen such statements, I'm sure. They're variously worded and are included among the purposes of English and Language Arts teaching, or as one of the objectives for school libraries. It bothers me; it just doesn't make sense. A book isn't something to love, any more than a roll of film, or a reel of tape, or a phonograph disc. Wouldn't it be ridiculous to set down as a worthwhile teaching objective; "To develop in boys and girls a love of television programs!"

Something's wrong when people think of worshipping a medium of communication! A film is so many feet of cellulose acetate with images printed on it. A book is so many pages of paper with words printed on them. Neither a book nor a film, per se, is worthy of anyone's affections.

*The importance of a film, a record, a radio or television program, a book, comes only when it carries a message to people, and when something worthwhile happens to those people as a result of that message getting through.* Audio-visual materials are powerful means of getting messages through to people to achieve worthwhile objectives.

Brotherhood Week, February 17 to 24, should remind us of objectives for human behavior toward which all Americans can strive, and toward which all American institutions should aim. Bernard Baruch calls attention to the unfinished job in these words: "There can be no second-class citizens in America. As

we expect each man, black and white, Jew and Christian, native and foreign born to bear the responsibilities of citizenship, so we demand that each share in its rights and privileges and we seek that all shall live in mutual respect, understanding and friendship."

The achievement of brotherhood is an unfinished job. Brotherhood is a feeling for all other people; it's an attitude; it's a way of behaving in relation to people who are different. Improving human relationships is a continuing objective for all teaching; and this goal is a continuing challenge and opportunity for the greater use of audio-visual materials.

There are many motion pictures, filmstrips, records aimed directly toward brotherhood objectives. But possibly even more important are those materials which indirectly can and do influence attitudes and feelings toward minority groups. Teachers and all group leaders, in their selection and use of audio-visual materials for whatever purpose, should be especially alert to those materials which *indirectly* provide wonderful examples of good human relationships, which show people of different race and creed and nationality living and working together in mutual respect and understanding. Vivid examples, indirectly shown, can provide messages that get through and influence people and their attitudes.

These were some of the things that came to mind when I thought about Brotherhood Week in 1957. Certainly no objectives could be more worthwhile than the elimination of prejudice and the establishment universally of ideals of brotherhood and justice. Film and other audio-visual media have a most important job to do in working to achieve those objectives. In fact, film and other media are only important when they do help to achieve such worthwhile objectives.

**NOW...IN LIFE'S OWN  
Color  
filmstrips**

**...THE FIRST FIVE TITLES  
IN "THE EPIC OF MAN"**

To make many of LIFE's pictorial essays even more useful to educators and educational groups, its Editors have reproduced this material in the form of exceptionally fine color and black-and-white filmstrips; those in color are based on LIFE's major essays in the fields of history, art, science and religion; those in black-and-white are prepared from LIFE's photographic reports on the current world scene.

Just completed are five new color filmstrips based on LIFE's current series, "The Epic of Man"—and LIFE will release other chapters in this series as fast as they can be produced.

These strips—and LIFE's other color filmstrips—cost just \$6.00 each; only \$5.00 when four or more color filmstrips are ordered at one time. Black-and-white filmstrips are \$2.50 each; only \$2.00 when four or more black-and-white filmstrips are ordered at one time. Even lower prices are offered when a complete series of black-and-white filmstrips is ordered.

To order LIFE Filmstrips, just check the complete list of titles, fill out the coupon below—circling the numbers corresponding to the titles you want—and mail. No need to send money with your order—we will bill you after you receive your filmstrips. (All LIFE Filmstrips are 35mm, single-frame.)

# THIS AV

by **ALBERT L. GOLDBERG**

**Assistant Professor,  
Audio-Visual Education  
Wayne State University,  
Detroit, Michigan**

and **CHARLES H. JESSEN**

**Director, Audio-Visual Center  
Wayne County Library**

**AUDIO-VISUAL CENTER, WAYNE COUNTY LIBRARY.** The quarters are in a typical store frontage, which is reported "quite successful."

**W**ITH JUST AN IDEA and two reels of a Civil Defense film the Wayne County Library began the operation of the Audio-Visual Center in August, 1953, to serve the audio-visual needs of the out-county area surrounding Detroit, an area comprising some 750 schools and a total population of approximately 800,000. To start the operation about 300 square feet was allocated in the rear of one of the twenty county branch libraries.

In the spring of 1953, a few months before the Wayne County Library Audio-Visual Center was begun, the Wayne County Board of Education had appointed the first of two audio-visual consultants. They were to work principally with teachers in the out-county area to improve utilization of audio-visual instructional materials. The library and the board of education have continued to work closely to improve instruction and education in the county and, since 1953, a large measure of progress can be observed not only in the extension and improvement of services provided by the Audio-Visual Center, Wayne County Library.

Starting with one professional person with an audio-visual background in school work, the staff has grown to four. In addition to the director, Charles H. Jessen, the Center now has a full-time secretary, a booking clerk, and a filmstrip inspector. As of June, 1954, the Center occupies its own building of some 1100 square feet, including a storage basement. But the Center's growth and development in service are more important than the space it occupies.

Within the structure of the branch libraries the Audio-Visual Center has worked intimately with the community

**Phyllis Talbat handles over-the-counter film requests. Mr. Missig is handling a phone request in the background.**

**Charles Warland and William Miller, Wayne County Board of Education Instructional Materials Consultants, are talking with Charles Jessen (right), Director of the Audio-Visual Center.**

# CENTER SERVES THE WHOLE COMMUNITY

it serves. This community consists of all public, private, and parochial schools, and several hundred adult community groups, clubs, and organizations in the Wayne County area outside of Detroit. The Center's services are also available to a number of county institutions.

Approximately 80 per cent of the Audio-Visual Center's films are used by schools for instruction. The films may be picked up at the Center or mailed to the user. For classroom use, films are usually booked for a three-day period. Thus, a teacher or group leader can preview the film, use it, and possibly re-use it in the time allotted. If the user can arrange to pick up and return materials to the Center, a week's loan is possible with no additional charge. At the present time, about 50 per cent of the circulation is on a "pick-up and return" basis.

As this flexible service has become known to the community, users have been requesting the Center's materials on a one to three week advance notice. Since many film sources book a year ahead of use, the Center's scheduling and circulation organization works toward more realistic planning and more effective use of instructional films. Helping to make more films available when needed is accomplished by use of phone contact. Teachers can call directly into the Center and in 95 cases out of 100 they can be assured of receiving their films when needed. Orders for schools are handled only through the Center while community groups may order through the Center or the branch libraries.

The Wayne County Library, Audio-Visual Center, selects films for its collection on a cooperative basis where possible. Assisting in making decisions in this connection are the consultants from the Wayne County Board of Education, and many administrators and teachers from the county. A special group of branch libraries has been organized to assist in the selection of films on the adult level. Films which are ultimately made available represent those which are considered the best from a wide range of viewpoints and subject matter interests.

Keeping the schools and community organizations informed as to available materials is a large and important service. Through direct mailings to schools

# PERSPECTIVE FOR

FOR MANY YEARS every artist has known that the key to a painting which has meaning is to be found in the skillful use of perspective. So he strives to depict objects and people in a relationship which serves to give depth and meaning to his picture, and which also enables his viewer to recognize and understand the scene portrayed. If we can grasp something of the importance which adherence to the laws of perspective gives to a painting, it will be helpful in our selection of the types of materials needed for use with pupils in our classes today. We need materials which help these pupils to grasp the meaning in depth of things and events; materials which provide them with a yardstick for measuring the value of happenings and which serve to present these events in relation to people past and present.

Now today's pupils are decidedly "eye-minded." It is not enough to tell them about places and events—they want to see for themselves. It is not sufficient for them merely to read about things in books. The printed word alone does not conjure up complete pictures for those whose learning is as yet meager, and perhaps even sadly lacking. They need to have visual evidence before their eyes in order to gain perspective for their reading and also to serve as incentive to fur-

ther study of any kind. In keeping with this fact it has been interesting to watch the preparation and development of a valuable set of filmstrips intended to serve as such visual evidence. Called "The Pageant of America Filmstrips" and produced by Yale University Press Film Service, the series has been five years in the making and is at last complete with the recent appearance of the final six units.

As a set of filmstrips they are both a challenge and an answer to this problem which faces every teacher, namely that of making learning interesting and meaningful. Let me tell you why I think so and see if you agree with me.

By way of introduction you need the following facts: The Yale University Press, through its Film Service, pioneered in creating authentic visual history materials with The Chronicles of America Photoplays. In the same tradition of attention to accuracy and substance, it has now provided us with thirty black and white filmstrips and related teacher's guides correlated to every important phase of the story of the development of America. The Board of Editors consists of Ralph H. Gabriel of the Department of History at Yale; William H. Hartley, Chairman of the Audio-Visual Committee, National Council for Social Studies; Clyde M. Hill, previously Chairman of

the Yale Department of Education and currently Director of the Yale University-Fairfield Study of Elementary Teaching; and May Hall James, Department of Social Studies, New Haven State Teachers College. Many noted authorities and specialists assisted as associate editors.

The basic pattern of the filmstrips is a chronological one, starting with the story of the American Indian and continuing on through days of French and Spanish exploration, English colonization, struggle for independence, westward expansion, the War Between the States, the period of reconstruction and on to the growth of American democracy and the rise of America as a world power. Each strip is accompanied by a Teacher's Guide which is actually a rich supplementary information source, and which in many cases provides interesting facts not always included even in texts. The pictures selected for use in the filmstrips include a wealth of rare source material drawn from the resources of many museums, libraries, historical societies and print collections. Topics and information included were determined after help and advice were obtained from some sixty state and municipal boards of education throughout the country. There are forty frames in each strip, basically planned and intended for use in the social studies program. The

Lincoln, reelected in 1865, was determined to bind up the wounds of a war-torn nation.

"Union and Reconstruction"

# LEARNING—THROUGH FILMSTRIPS

series is thus a visual resource reference shelf of material pertaining to our country, our social, economic and cultural growth and progress; the effects of the machine age, and the development of America as we know it today.

What does all this mean for the classroom teacher, for the curriculum consultant, for the audio-visual coordinator, for the interested school administrator, and most of all for the pupil? It means essentially that each and every one of them has at his finger tips something that is needed if we are to study effectively and really grasp, in a deep sense, the significance of American history and the social sciences. It means that each and every one of them has a collection of first-hand documentary evidence on which to base examination, consideration and discussion of the forces that have molded and contributed to our American way of life.

First reactions began to come in while the series was still in production, for it was released in units of six filmstrips at a time. As audio-visual experts will be interested to know, these reports stated that the strips were technically well done and were being used to introduce, to summarize, to augment and to review subject content. This was a healthy sign, for it meant that there was a potential range of

utilization that allowed the individual teachers to use them to meet particular class needs.

Initial teacher reactions, substantiated by continuing reports from the field, indicate that teachers do indeed find "The Pageant of America Filmstrips" to be a part of the warp and woof of social studies. But because the content is broadly inclusive it also has value for correlated study in areas of science, English, safety education, conservation, economics, world geography and citizenship education. In other words, this is good solid curriculum meat. The filmstrips provide something which Allan Nevins, in "The Gateway to History," page 3, says is the essential utility of history, namely, "It (history) enables communities to grasp their relationship with the past and to chart on general lines their immediate forward course. By giving peoples a sense of their continuity in all their efforts, and by chronicling immortal worth, it confers upon them both a consciousness of their unity and a feeling of the importance of their achievement."

Last, and by far the best of all, pupils have actually gone on record as finding the pictures interesting as representatives of reality; and of being something to which they could turn to find answers. Actual tests in various cities indicated conclusively that pupils

responded favorably to the wealth of detail and feeling of authenticity. Personally, I think comments from two Buffalo pupils are classics: "I got a kick out of seeing the name 'Cadillac' applied to a person," and "I like Champlain's own drawing of the encounter with the Indians." Such comments are not teacher-directed; they come from the mind and vocabulary of the pupil himself. And this is what we want—pupils reacting to materials in terms of their own experiences and feelings. If filmstrips will do this I, for one, say they are good and should be in our classrooms.

In basic editorial approach this filmstrip series is much like *The Pageant of America* volumes. Each strip, like the individual book, is a unit in itself; each strip is a record of an adventure or episode; taken as a whole the series is almost encyclopedic. That is its challenge to a teacher—a challenge to be skillful enough to use the part which will whet pupil appetites and stimulate them to go ahead on their own. The answers will be given by the pupils in terms of deeper appreciation for the fact that history has been a living thing and is still living. Why not try for yourself, and see what these filmstrips will do for your own pupils' perspective on learning?

THE BASIC THESIS of this article—that there are important relationships between audio-visual communication and college libraries—is based on two assumptions. The first is that important ideas are being expressed, and in many cases expressed better, through ways other than the printed page. The second assumption is that college libraries are concerned with making available ideas, regardless of media.

Please do not misunderstand—there is no intention of belittling the importance of books. On the contrary, growth in use of audio-visual materials is usually accompanied by a growth in use of printed materials, and books can do many things better than these other materials.

The modern college or university is finding an increasing number of valid reasons why it should spread its influence to the people of all age levels in the *community* it serves. Such institutions are finding audio-visual aids of great assistance in this spreading of culture to the community. In many instances, institutions are finding these newer means more appropriate vehicles for ideas. Professors, researchers, and students, as *scholars*, need to get at ideas in the best form available. The task of the scholar is sufficiently difficult without providing, as stumbling blocks, unnecessary limits to best available means to ideas. Professors, as *teachers*, are obligated to use as instructional tools the media most appropriate to the idea being taught. The college professor, who once used primarily lectures, texts, and reference reading, is finding it necessary to use other instructional devices. One reason for this is that more material needs to be covered, and deeper insights need to be gained. Another reason is that as colleges attempt to educate larger and larger masses, other mass media are proving more effective. Still another reason is that as *goals* of education change, the *means* of education must change. By the same token, students as *learners* and as the future leaders of our country are entitled to deal with ideas in the very best form our technology and economy can provide. Because scholars, instructors and students need to get at ideas in the best and most appropriate form possible, it is then reasoned that our colleges and universities *want to provide*

*This article is reprinted with permission from the September 15th issue of the "Library Journal." Author Johnston is Associate Professor of Education at the University of Tennessee, Knoxville.*

# College Libraries Need Audio-Visual Materials

by A. MONTGOMERY JOHNSTON

*the ideas in the best and most appropriate form possible.*

Let us consider for a moment the full scope of audio-visual aids and services *needed* on a college or university campus:

- (1) Selecting, purchasing, housing, organizing, providing for preview, auditing, or display and circulating tapes through:
  - Record collections (disc, tape, and transcription)
  - Microfilm collections
  - Filmstrip and Slide (2" x 2" and 3 1/4" x 4") collection
  - 16mm film collection
  - Flat picture collection
  - Map, chart and poster collection
  - Objects, specimen, models (museum type materials)
  - Paintings, etchings, etc.
- (2) Making and/or assisting instructors to make teaching aids.
- (3) Maintaining and circulating audio-visual equipment and operators.

- (4) Providing consultant service to instructors on the improvement of teaching through audio-visual aids.
- (5) Providing instruction of the general student in an understanding of and ability to use audio-visual aids.
- (6) Providing instruction of students specializing in the details of audio-visual communication.

What is the relation of the college library to all these audio-visual materials and services? First, most college libraries are already involved to a limited degree. Many provide microfilm services. Others provide numerous displays of various arts and crafts. Many house collections of flat pictures, charts, maps. Still others have collections of recordings, as well as large and small slides. A few college and university libraries provide their institutions with a complete audio-visual service including the six kinds of services previously listed. The University of Omaha is an example.

A second point in considering the relation of the college library to audio-visual aids is that the library wants the aids and services to be provided for its professors, scholars, and students in the best way possible in its institution. In other words, the library wants *that part of its institution* to do the job that has the *personnel* who are trained and interested; that has or can get the *money* to do the job; and that has the *space and facilities* to do the job.

A third point in the relation of audio-visual aids to the college library is that, other factors being relatively equal, the library is interested in providing for its clientele a *one-stop service*. A service where students and staff can track down ideas in various forms or media without having to shuttle from building to building.

A fourth point is that librarians have many understandings and skills about handling printed materials that will readily *transfer* to the handling of audio-visual materials. Such skills as using selection aids, processing, cataloguing, and circulating materials, for example. Librarians *do not*, as a rule, however, have certain other skills and understandings which are desirable, such skills as operation and maintenance of equipment, understandings of media possibilities and limitations, how to fit instructional aid to teaching methodology, production techniques for aids not commercially available, and how to instruct the general and special student in audio-visual communication.

(Continued on page 98)

## ...now let's pick the right 16mm sound projector

Educational leaders who know the value of films as a teaching tool know, too, how important the right projector is.

Here are some of the questions they ask—and answers that can help you make a wise choice.

**1. Is it easy to set up?** You'll want a machine that can be handled confidently by many people, including inexperienced operators. Try the Kodascope Pageant 16mm Sound Projector. Hinged reel arms, with attached drive belts, fold quickly into place. Even a novice can follow the threading path, printed on the machine. This makes for smooth, sure starts... every time.

**2. Are the pictures bright and sharp?** You don't have to be satisfied with washed-out pictures, even in hard-to-darken rooms. The Pageant's special Super-40 Shutter puts 40% more light on the screen at sound speed than ordinary shutters. You get sharp images, full of sparkle and important detail... the

kind of pictures that catch and hold attention on the screen.

**3. Can it use the full range of sound on the track?** Sound-track sound, not projector noise, is what you want. And you get just that from a Pageant because you have a complete sound system—true-rated amplifier, well-baffled speaker, and separate base and treble controls. And the Pageant's nylon gears give you whisper-quiet operation.

**4. Is it always ready when and where wanted?** Pageants are lubri-

cated for life. This ends the most common cause of breakdown and keeps maintenance to a minimum. And a Pageant is easily portable—ready for use anywhere, at a moment's notice.

For a complete demonstration of how a Pageant can help you make the most of every showing, visit a nearby Kodak Audio-Visual dealer. Or write us for details. No obligation, either way.

*P.S. With the addition of Kodak's exclusive Bi-Focal Lens Converter, any Pageant can be used in a small or large room and still provide the right-sized screen image.*

**EASTMAN KODAK COMPANY** Dept. 8-V  
Rochester 4, N. Y. 2-111

Please send me complete information on the new Kodascope PAGEANT 16mm Sound Projectors and tell me who can give me a demonstration. I understand I am under no obligation.

## ... an excerpt from the book

The following "article" is excerpted with permission from the book "How To Use Audio-Visual Materials" by John W. Bachman (Association Press, 291 Broadway, New York 7). This inexpensive little book (price: \$1) is an excellent guide to the why and how of audio-visual use, one all group leaders — in church, school and community — should know about.

**E**SSENTIALLY, audio-visual materials can be helpful because of one basic characteristic: they can provide sensory experiences. Whether they are offering a new experience or recapturing a forgotten one, they may convey, through eyes and ears, a more realistic and vivid impression than words alone are likely to create or recollect.

You may, for example, extend a person's environment by acquainting him with *places and customs* miles or centuries away. Much of the current front-page news is date-lined from parts of the world few of us have visited; both Jewish and Christian heritages have geographical, historical, and cultural foundations foreign to most of us. Good pictures and films can bridge the gaps of space and time with a realism beyond the descriptive power of the word.

*Learning to know people* usually requires more than reading about them. Neither physical descriptions nor biographical data are adequate to communicate personality. Through radio and television, tape and film, your group may become acquainted with

persons otherwise scarcely known to them. Parents and teachers can use the same means to observe children at various ages. A series of films portraying the activities of adolescents will help older leaders to remember that behavior which appears to be very unusual may instead be typical.

As the armed forces have learned from careful research, *skills* may be taught more effectively by showing how, rather than by telling how to perform them. Whether you are training young people to drive a car, or older men to be church ushers, or children to make lantern slides, there are films, filmstrips, models, or mockups for your purpose.

More complex experiences are the *actions* which bring us into relationship with other people. Here, too, there are "packaged" materials in the form of films or recordings which portray many different situations. Citizens facing problems in their own locality may thus study the efforts of groups elsewhere to meet similar issues. Or, instead, you may wish to undertake field trips and personal interviews, which are closer to being first-hand experiences. You may also consider encouraging your group to engage in forms of creative drama, such as psycho-drama or socio-drama, which enact common personal and social experiences. These may involve participants to the point that they are scarcely removed from original life-experiences.

### Some Are Substitutes

All the experiences above are, in some sense, substitutes. They are not original and unedited but somewhat contrived and selective. These characteristics give them certain advantages over most firsthand experiences:

1. They are most likely to be available at the time desired.

2. They are likely to be more comprehensive. By careful selection a documentary film or recording may pack into thirty minutes the high points of hours and days of direct observation.

3. They may make possible a sense of perspective seldom achieved in direct participation. A person who is hesitant to discuss his own situation, after seeing a relevant film may be willing to discuss what appear to be the problems of another and gradually come to realize that they are his own also.

### Some Are Firsthand

It is not enough, however, to say that audio-visual materials provide vicarious experiences. Many of them, because of their form, provide new, firsthand experiences. Charts and diagrams may visualize relationships in

original and distinctive ways. A dramatic production or animated film need not merely *represent* an historical event; it may artistically *create* an event or suggest new interpretations of historical events.

### All Are Attractive

The very fact that audio-visual materials are experiences in sight and sound makes them attractive. Every teacher who has shown motion pictures in a classroom has observed that passers-by often pause at an open door and occasionally even slip inside. Few lecturers add members to their classes in this way! Human nature makes sensory experiences attractive. Most people prefer, when possible, to see actual mountains, or at least pictures of mountains, rather than the mere word, "mountains."

This attractiveness makes audio-visual materials suspect among some academic purists who seem to maintain that education must be dull to be valid. Admitting that learning is far more than the pursuit of entertainment, most educators and virtually all students believe that there is often a direct relationship between attractiveness and effectiveness of teaching. In the case of audio-visual materials the same characteristic which makes them distinctive and attractive, their ability to provide sensory experiences, also makes them valuable in the learning process.

### How They Contribute

Experiences provide a *foundation for learning*. To learn, a person must be able to classify his experiences and be able to generalize upon them; he must be able to translate objects and actions into concepts which will allow him to reason, to formulate attitudes and convictions. But first, he must have the experiences. To climb into the atmosphere of abstraction he must have a solid point for his take-off. The child who prayed, "Give us this day our jelly bread and lead us not into Penn Station" was simply unable to leap from nowhere to abstraction such as "daily" and "temptation."

Does this imply that audio-visual materials are useful only for children and illiterates? After we have developed a fairly comprehensive vocabulary, are concrete experiences unnecessary? Not so long as words can be misunderstood or misused. Long-known and frequently used words often need *reorientation*. Such a common term as "loyalty" may have one connotation for an army officer, another for a teen-age member of a New York street gang, and still another for a poet. "Love" has been portrayed in

terms of moonlight, roses, and tooth-paste until it is difficult to attach any deeper significance to the word without reorientation. The same can be said about freedom, justice, power, peace, sin, salvation, and many others you can list. So much has been written about the causes and effects of juvenile delinquency that an unaided group discussion may bog down in jargon. A film, however, depicting the struggle of a child who feels unwanted, will restore focus to the problem. After watching the child's confusion, along with efforts toward rehabilitation, members of a group are less likely to have difficulty in finding meaningful terminology. Common experiences contribute to common understanding.

Similar reorientation is needed to combat the use of words in stereotyping. Most Americans know there is a "migrant problem" but how much is known beyond this? Films and recordings of the experiences of migrant families reveal their needs as people and not just their classification as census figures. This power, of course, is a two-edged sword; concrete presentations can be used to perpetuate stereotypes as easily as to destroy them, as witnessed by the habitual portrayal in the mass media of certain minority groups in nothing but servile positions. Stereotyping of ideas may be perpetuated in the same way; confining illustration of the term "immorality" to a scene in a bar may reinforce a narrow view of a comprehensive term. To communicate accurately the meaning of an abstraction usually requires more than one concrete reference, and extremely careful selection of those which are used.

Audio-visual materials with their sensory experiences provide, therefore, not only a point of departure but also a point of return for the learning process. Both are needed regularly. Dr. Edgar Dale of Ohio State University explains:

Learning is a process in which the concrete and the abstract interact. We move from the concrete to the abstract and back again to the concrete. It is a shuttling back and forth in which generalizations help us to understand new concrete experiences and the concrete experiences in turn help us to enlarge or refine our generalizations.\*

A child accidentally touches a heated iron and learns the meaning of the abstraction "hot." If the original experience is vivid enough he may be able to apply the abstraction to other concrete expressions of "hot," such as a lighted match. Still other experiences will later allow him to define the meaning of the word.

# DO YOU HAVE A "DEAD"

# SUBJECT?

Even if you have a "dead" subject, you can bring it to life with the Pride Electric Pointer.

Now, we don't claim to raise any old Pharaohs out of their pyramids, but we do guarantee that more life can be brought to any lecture platform with the use of the Pride Electric Pointer.

Pride Electric Pointer is a small, lightweight, entirely portable instrument in the form of a flashlight that projects an arrow-shaped image → (not just a flashlight beam) up to a distance of 98 feet. Aside from telescoping your arm or making a 90-yard dash in a panting split second, this is the simplest medium available to you for focusing audience attention on any visual display.

Some people use old-fashioned wooden pointers; and there have been optical pointers in the past, but they were surfeited with encumbrances—long wires, transformers—which served to tie down and hinder the full expression and ease of the lecturer. The unique arrow shape is designed to eliminate any possible diffusion of shape or image. Powered with two ordinary flashlight batteries, Pride Electric Pointer has no transformers, no wires, no burn-outs. It obviates crawling on all fours around a lecture room in search of plugs or outlets.

Now, the regular price of the Pride Electric Pointer is \$18.45, but during this limited 15-day introductory offer, it's yours for only \$14.76 plus postage and c.o.d. fee; or enclose check with your order and we pay postage. Take advantage of this 20% professional discount and order today. If you are not completely satisfied after 10 days' examination, return your Pride Electric Pointer for purchase price refund.

Check enclosed.  Send C. O. D.

# COMMUNICATION

by **GEORGE GERBNER** and the Rev. **JOHN G. HARRELL**

Special

Church

Section

*Workshops and courses in audio-visual teaching methods aimed specifically at the church worker are not new. The Green Lake Workshop, for example, has annually broadened and deepened the knowledge of those already "converted" to AV. This year again the International Workshop will tackle at Green Lake, Wisconsin, AV problems of urgent concern (see comments on page 82).*

*Besides the annual Green Lake Workshop, every year there are many one-day or two-day regional workshops, arranged chiefly under the auspices of the National Council of the Churches of Christ. And there are many excellent audio-visual workshops and courses under Catholic, Jewish, Unitarian, and other religious auspices.*

*For this special religious section, however, we have singled out for feature attention a religious AV workshop*

*held last spring at the University of Southern California. The board of directors of Cathedral Films gave a grant to the University to establish a graduate workshop for seminarians and specialized church workers in the use of audio-visual materials. Fifteen scholarships were awarded together with an additional hundred dollars each for travel or living expenses.*

*The workshop met for a period of six weeks. Three courses were offered: a course in research and theory of audio-visual education conducted by Dr. William Allen, a course in evaluation by Dr. George Gerbner and one in utilization by the Rev. John Harrell.*

*Here Dr. Gerbner and the Rev. Mr. Harrell report on the workshop in general and in some detail on one aspect of it which, in their opinion, may turn out to be the most significant achievement of the session.*

**W**HAT PROMISES to be a significant contribution to the training of clergy and seminarians in Christian education got under way this past summer. Because the leadership of this program is convinced that it is important for educators and the church at large to understand and promote the continuation of the workshop, we propose to review its structure and content in this article.

The workshop met from June 25 to August 3, a period of six weeks. Three courses were offered. A course in research and theory of audio-visual education was conducted by Dr. William Allen. Evaluation and utilization of audio-visual materials were presented by Dr. George Gerbner and the Rev. John Harrell.

Dr. Allen's class met for lectures and exchange of student research daily at 10:00 A.M. At 11:00 the workshop met for the balance of the school day, adjourning at 4:00 P.M., allowing, of course, for a lunch period at noon. During the longer sessions an effort was made to find a framework in which to set audio-visual materials, a basis for evaluation, and modes of utilization. Extensive use was made of the

audio-visual laboratory at the University, their Department of Cinema facilities, and field trips were made to the Hollywood studios.

One interesting aspect of the workshop was the dual leadership provided by the communications expert and the minister of education. They contrasted one another in another fashion. One was from a university background, the other from motion picture production. While their origin and approach represented such contrasts, they came to a point of meeting in most respects. Their exchange during the workshop provided an excellent opportunity for the students to participate and come to understandings of their own.

## Division of Work

The bulk of the work of the workshop could be divided into three broad categories: (1) Construction of communication materials by the students; (2) operation of equipment; (3) practice in selection, utilization, and evaluation of techniques and materials.

Under the first heading students constructed exhibits, demonstrations, posters, bulletin boards, flannel board materials, lantern slides, and recorded

# IN CHRISTIAN EDUCATION

presentations. These projects were done with materials provided in the laboratory, and for actual use "back home" as well as for the practice.

Equipment available at the lab included standard makes of motion picture and still projectors, tape recorders, and record players. Each student was "checked out" on each piece of equipment after a few practice sessions.

Location and selection of materials were facilitated by an extensive file of catalogues available for constant use, but was somewhat handicapped by a shortage of time for extensive previewing. Here the emphasis necessarily had to fall on intensive evaluation sessions rather than extensive coverage of the field of available materials.

## Summing Up

The balance-sheet of the workshop could be gleaned from student and leadership comments crystallized during the last few days of the session. It could perhaps be summed up best on the credit side by saying that it has

achieved its purpose of helping to integrate communication materials and techniques with religious instruction. On the debit side, there was a chronic shortage of time to pursue, often even to take up, ideas and techniques many felt were needed. Because of the pressure of time, there was little opportunity for joint planning and stock-taking about general policy and direction. All in all, by the time we came to the close of the workshop we felt ready to begin and do it so much better. But is there any other way to end a successful workshop?

## A Good Theory

While the orientation of the workshop was primarily of a "practical" nature, it became apparent already on the first day that the most practical thing is a good theory. What is the nature of Christian education? What is the role of a study of communication materials and practices in Christian education? These are fundamental conceptual questions. They must be an-

swered in some way so that we might view, select, organize materials, use techniques and equipment not only efficiently but also effectively and intelligently.

The beginnings of a theory that might help at least place these questions in perspective, even if not answer them immediately, emerged from the give and take of the workshop. As the more theoretical formulations emerged from the workshopers' attempts to clarify and justify "practical" techniques, they were diagrammed on the chalkboard and flannel board and continued to serve as a framework for discussion.

During the final week, the workshopers were engaged in making a pictorial record of the summer's experience, and perhaps significantly, in arranging for a photograph in the laboratory, two diagrams were sketched on the chalkboard. To the workshopers they represented the framework of our explorations and continually, throughout the six weeks, we had had occasion to return to the diagrams for clarification

**WORKSHOP AT WORK.** Shown here are seminary students of many denominations participating in the audio-visual Christian education workshop sponsored by Cathedral Films, Inc. The workshop was held in the Cinematography Department of the University of Southern California, Los Angeles. Cathedral Films is now planning to expand the workshop idea to other campuses across the nation.

and direction. It would seem important, therefore, in this article to consider the two diagrams at length although it must be understood that in doing so an exaggeration will appear, for during the summer they did not occupy in time the same proportion as they will in this article.

It seemed to us, if audio-visual materials were to be considered in terms of their educational use, that at the outset there needed to be a firm understanding of Christian education itself. This, of course, seems extraordinarily obvious, but also obvious is the difficulty in coming to a common understanding, if not agreement, of what precisely each of us considered Christian education to be. Indeed, when the topic for discussion was first presented, the workshoppers, representing many traditions and points of view, found it amusingly hopeless. We were able, however, to come to a tentative definition: Christian education is a purposeful direction or guidance in which the redemptive power of Christ is introduced into the experience and life of the pupil. This is actually a very inadequate definition, but it was one with which we could all agree and it provided the basis for further exploration.

It should be said that besides the two diagrams, there was constant reference throughout the workshop to a role-play situation which was intended not only to provide experience in this technique of education, but also to enlighten the problem of Christian education. It is necessary to consider this role-play story.

### A Role-play Situation

Freddie, a junior age boy, is the unfortunate sufferer of a broken home. His father, an alcoholic, had frequently abused his mother and on one occasion had struck Freddie. Now that his parents were separated, Freddie tried to play the role of the good husband. Then, for several weeks, he failed to attend church school and his teacher made a call at his home. Freddie stood in the doorway and explained that his mother was ill. And to the teacher's assurance of God's care of us and as an explanation for his absence from church school, Freddie announced that he no longer believed in God.

Execution and discussion of this role-play occupied several days. The curious thing was that while in discussion the workshoppers saw the necessity of entering the house (and the symbolic implications of this), invariably in acting the roles the teacher remained on the doorstep and discussed the arguments for God's existence!

We were able to see, however, that:

- (1) Freddie needed help now;
- (2) His expressed needs were not his real needs; and
- (3) Content teaching, unrelated to needs, apart from failing to reach Freddie, failed to do much more than raise his resistance.

While the Freddie role-play is an exaggerated situation, it is clear, however, that every boy and girl in every church school class carried with him needs which similarly must be uncovered and met with the redemptive love and grace of God.

Christian education, we determined, was, to use an analogy from physics, a field created by two foci: needs and content. In no way, in this analogy, are the two to be considered as either/or, but rather that education involves both in a dynamic field of interaction. The beginning of our diagram was taking shape.

While the Freddie role-play had done much to reveal the nature of needs, both conscious and unconscious, content necessarily needed exploration as well. It was determined that we imply three things by content:

- (1) Facts of the faith, together with the enrichment of "religious" appreciation (somewhat analogous to "music" appreciation, etc.)
- (2) Skills, such as use of the Bible, how to pray, and so forth. And,
- (3) Something far more difficult to define—grace, by which we meant the love and forgiveness and concern Christians have for one another in the fellowship of the church, as well as the mediation of grace through worship (and sacraments).

It also became clear that needs not only became the selective element of content, but that there was a true interaction—that the content of faith had something to say about the nature of man and illuminated the needs of the pupils. But it must be said that the needs were considered as present ones and Christian education, we felt, necessarily must concern itself with *redemption now* and not be exclusively or primarily concerned with redemption sometime in the future.

Our diagram was now to be extended so that it represented, not a single individual, but the nature of a class.

It is clear from the diagram that we conceived the content of Christian education as a single factor—"there is one Lord, one faith, one baptism, one God and Father of us all." While, on the other hand, each child in the class brings his own individual needs. There is, therefore, the shaded areas of shared needs, in relation to content, and it is very largely these which form the true field of classroom education.

In the development of this diagram of Christian education, and while understanding audio-visual materials as being elements introduced into this field, the workshoppers found that they had come to agreement and had deepened their own understanding of Christian education.

But the curious thing was this. Just as in practice, in the Freddie role-play, the teacher never got to Freddie's real needs, continually members of the workshop could obviously be seen to have an inner struggle with the diagram, for while it represented to them the profound nature of what Christian education should be, nevertheless denominational traditions of catechetical instruction repeatedly surged up and caused conflict. One workshopper, convinced of the diagram but unable to dispel the catechetical approach to Christian education, confessed in an emotional moment, "There must be something wrong with the diagram somewhere!" Old modes of thought die hard!

The second important diagram was intended to illuminate the problem of communication. As such, as we will presently indicate, it served not only to guide us in the evaluation and utilization of audio-visual materials, but to provide us with a keener insight into Freddie's, and any other pupil's, needs.

The process of communication, it seemed to us, was briefly defined in the statement, "Someone perceives an event and makes a statement about it." We proceeded to diagram this by drawing a large circle for "someone," labeled M (man). Then another large circle for "event" labeled E. The two were connected horizontally by a line that stood for perception.

Considering the nature of perception, the fact that it is creative and

interpretive, not only reproductive or reflective, we found it necessary to draw a smaller circle inside M. This smaller circle inside M represented the way in which M perceived event E. Therefore we labeled it E' — i.e., event E as perceived by M. Obviously what M says or does depends not only on the nature of the event to which he reacts, but also on the way in which he perceives the event. Hence the vital significance of E'.

Now when someone (M) perceives (E') an event (E) and proceeds to make a statement about it, his statement reflects each of these aspects of communication plus his beliefs and values, plus the means he has used to make his statement (voice, graphic, cinematic, etc.).

This relationship is the vertical line of the diagram. It leads to the statement itself, the divided circle SE (statement about event). This "communication product" is what another person perceives, and thus this link in the chain of communication leads to another, similar link. SE, the communication product, can be divided, for more technical purposes, into S, the signal — its form, style, etc. — and E, the actual content (i.e., reflection or representation of event E), which, when perceived by another, becomes what we call meaning.

Now let us return to Freddie. He is standing on the doorstep, explaining to the teacher that his mother is ill and arguing his consequent disbelief in God.

The role-play situation can be easily diagrammed on our communication model. Freddie is our M, the communicator. His statement reflects (a) his current beliefs; (b) the particular way in which he perceived his situation (E') and the actual event that concerns him, i.e., his mother's illness (E).

What does that show us? It shows that the teacher in the role playing did not penetrate deeply enough into Freddie's statement even to get his foot in the door. It shows that the theological argument at this point did not meet the real and pressing need; the source of Freddie's concern was the actual event (E) in the bedroom, his mother's possible plight. It shows that the immediate problem was not even Freddie, but the objective situation (E) in which he found himself. The circum-

stances demanded help. Freddie's beliefs would change when they reflected changed circumstances, as well as a new point of view.

With the help of the two diagrams, and such considerations as these, many communication situations and materials were subjected to searching scrutiny. A picture, film, filmstrip, recording represents "content" in terms of the first diagram, and SE or communication product on the second. How is it related to needs? To the actual events it reflects? How was the event perceived by the producer? What built-in beliefs and values does the

material reflect? What means or combination of means produced it? In what form? How is its actual content perceived by the individuals for whom it is intended? What further perceptions, statements, and effects does it elicit?

Much thinking and research are needed along these and similar lines before we can reliably discuss the use of communication materials in religious — and all — education. The fruitful experiences of this summer's workshop did not provide all the answers, but did break some ground in developing a theoretical approach to asking the most pertinent questions.

## AV in the Evangelical and Reformed Church

by OSCAR J. RUMPF

Director, Bureau of Audio-Visual Aids  
Evangelical and Reformed Church

THE EVANGELICAL AND REFORMED CHURCH, like most Protestant churches, began the use of projected audio-visuals before there was an Evangelical and Reformed Church. (The merger occurred in 1934.) For we, too, used the standard stereopticon 3 1/4" x 4" slides to tell the story of missions. In addition, the Board of Christian Education and Publication of our church purchased the Albert E. Bailey standard slide collection in 1938 and made these high quality slides available for rental and purchase.

Actually, there was never any letup in our promotion and use of audio-visuals from that time on. In the early days of our merger, more than fifteen years ago, we set up a library in the Board of Christian Education in Philadelphia and another in the Department of United Promotion in Tiffin, Ohio. These were merged in 1948 and located in the identical rental and sales libraries in Philadelphia and St. Louis.

Our Evangelical and Reformed Church has always been in the forefront of cooperative enterprises. We were charter members of the RFA (The Religious Film Association, Inc.) and now the new RFL (Religious Film Libraries). We united with other Protestant denominations in various production enterprises, first through the Protestant Film Commission, then the Broadcasting and Film Commission, releasing films on Christian education, stewardship, and missions.

The Evangelical and Reformed Church and the Congregational Christian Churches began planning approximately ten years ago for the release of audio-visuals designed to visualize aspects of the basic quarterly study

material, ages primary through adult, which the two communions were publishing.

Since that time we have completed and released two three-year cycles of filmstrips and are now issuing the twenty-sixth quarterly filmstrip. What is most important to note is that these filmstrips have been designed purposefully to be of use to Protestants generally. They are used by most Protestant groups in the U.S.A. and are sold in seven foreign countries. Each of these filmstrips has been accompanied by specific guidance for each church school age group; and by two scripts, one for children and one for adults.

Our denomination has had one audio-visual agency—the Bureau of Audio-Visual Aids—with two outlets: one at Philadelphia and one at St. Louis. This agency has directed the making of twenty-six filmstrips for curriculum in the past eight years and has made approximately fifty other filmstrips; and has produced seven sound filmstrips and ten films.

*Second Chance* was the first in a well-known series of six stewardship films which we helped produce through cooperative effort.

For the last three years we have made annual filmstrips for each of these agencies of our Communion: National Missions, International Missions, and World Service. They were developed in direct relationship to the annual emphasis and work of each agency. Pastors could order (free to keep) a filmstrip on the work of each.

For two years every pastor has received one copy of the annual United Promotion filmstrip telling about the total program and work of our denomination.

The Evangelical and Reformed Church prefers cooperative production and distribution. It believes that Protestants ought to work together even more closely.

Our own productions include the films *Life of Christ*, *The Right Hand*, *A Train of Action*; the filmstrips *Amos*, *Christian Symbols*, *Summertime Activities*, *I Work With Junior Highs*; and the curriculum filmstrips *The Growth in Our Idea of God*, *The Bible Through the Centuries*, *Palestine in Jesus' Day (I and II)*, *Life of Christ (I and II)*, *Life of Paul*, *The Growing Household of God*, *The Church in New Testament Times* and many others.

## Work for the Workshop

The leaders of the audio-visual movement in the field of the church have some pressing problems to tackle, and we ask if there is a better place than the annual Workshop to be held at Green Lake, Wisconsin, September 4 to 11 this year? We shall suggest several areas of concern, and the list can easily be extended:

In general and specifically, what audio-visual media should be used for any given part of the church's total message. If we have something to communicate, into what media should it be cast? After the general medium has been chosen, what particular type, or structure, of that medium should be used for this particular message? We need to develop criteria and points of reference to guide those responsible for AV productions. Now we are operating by guess and by garsh.

From top to bottom, from script conception, to promotion, distribution and utilization, it is high time that we get some educational vitamins into the AV movement in the church field. Now pretty well dominated by preachers, this educational innocence is showing all the way from top denominational brass right down to the staff of most local churches. If AV materials are to

be of much educational use in the local church, they must be conceived and created as well as used by educators.

Again, it is high time that we look at the whole production-distribution process. Films especially are costing too much all along the line: to produce, to release, to distribute, to rent. Without a doubt price is a factor in the failure of usage graphs to rise with those of production. This means more and more "broader" films in the local libraries, and more and more dealers wondering if the whole thing is worth the bother. It takes usage to produce rentals, and rentals support the whole AV structure in one way or another. Can the leaders of the churches come up with something new and revolutionary in this area?

The vested interests of church publishing houses to the contrary notwithstanding, the time is ripe for some downright integration of AV materials into church school curricula. A beginning has been made here. These efforts should be appraised, and the fundamental gumption involved in integration should be defined and elaborated. Garnishing the curriculum with visual aids like a roast with parsley is not enough, for like the green stuff, it is easily pushed aside.

And very soon the leaders of the church charged with AV responsibilities will need to do a real job of thinking on the whole problem of Biblical visualization. The findings of a prior study need to be evaluated anew, and many new facets of the problem examined. Quicker than most of us think, we shall need to face the implications of critical textual, theological, and historical study for the audio-visualization of Biblical materials. The going here will be rugged, but the job can't be put off forever.

No doubt every reader will want to add to this list, and your reactions will be welcomed cordially whether in formal articles or informal letters.

## Living in Bible Days

In "Living in Bible Days," SVE has produced a good and useful series. *School in Capernaum* presents a typical day in a synagogue school for Jewish boys during New Testament times. *At Home in Nazareth* shows a typical first-century Palestinian household and its daily activities. *The Sabbath in Capernaum* tells of the special activities in a typical home in the observance of the Sabbath. *Market Day in Galilee* shows a father and his two sons visiting the market, observing its trade and commerce. *A Trip From Nazareth to Jerusalem* shows a family making the

trip for the Passover, indicating travel conditions and general geography.

The full color artwork, about 30 frames in each and by four different artists, is uneven in general qualities, varying from fair to good and to very good in the last title. In a series such as this, the pictures should harmonize, not contradict each other as they do from time to time. It's asking a great deal, we know, but the same objects should look a lot alike as we go from title to title, and both children and adults will expect it. Here and there it is difficult to identify quickly and easily those pictured. Sometimes the color tones are badly balanced and clothing is often too vivid.

The "scripts" are nicely printed and contain useful background materials. The commentary by Melba Petersen has good general qualities, but needs smoothing out in quite a few spots. A good deal of checking and research went into this series and it is recommended for the Primary-Junior level in church, vacation, and week-day schools.

## Know Your Neighbors Series

Produced by the late Alan Shilin, the "Know Your Neighbor Series" of six 13½-minute color films on missions and world brotherhood is now distributed by the Broadcasting and Film Commission of the National Council of Churches, 220 Fifth Ave., New York 1, N. Y. The rental on each is \$6.00.

The primary audience for these films is children, but young people and adults too will like them and get much from them. Their structure is simple. It varies in detail from film to film, but we are always seeing good photography and listening to a commentary that makes mighty good sense.

*African Cousins* gives us a typical day in the life of Endoli and his cousin who attend a mission school, with a nice emphasis on the basic similarities in the lives of the world's children.

*Bantu Girl* presents Dolly, some nine years old and a real help to her mother. She goes shopping, plays with friends, and wanders to the seaport where she sees a big ship and wonders about boys and girls in other parts of the world.

*Cayambe's Children* tells us of Anelida, an Andean Indian girl, who lives and works with her family on the slopes of Cayambe, deep in Ecuador, but not so deep that there is not a mission station not so far away.

*Honshu Holiday* records a day in the life of a Japanese farmer and his family as they enjoy a great Japanese festival in the city some miles distant.

For a deeper understanding of the place of religion in the life of refugees . . .

**IN THE FACE OF JEOPARDY** (produced for the Joint Commission on Missionary Education under the supervision of the Broadcasting and Film Commission of the National Council of Churches) is a dramatic film story of the present-day struggle between communism and Christianity and the contest in one man's heart between fear and faith.

Warned by his Chinese houseboy, Doug Crane, an American tin minder, detonates a land mine planted across the path of his car by Communist terrorists.

The jungle terrorists came to Ah Chin's village and attempted to persuade him to come over to their side.

**WHAT PRICE FREEDOM** (Broadcasting and Film Commission, NCC) tells the story of a gallant Christian girl whose faith and fearlessness should influence free peoples everywhere to rededicate themselves to freedom. It is based on a real life experience.

Krause reveals a concentration camp number tattooed on his wrist. "Five years at Dachau and a thousand tortured memories . . . Then starvation and the hope held out by Communism. I no longer believe in the creed. But there is no way out."

When Elso refuses to vote on a resolution to condemn Western capitalistic democracies, her fellow workers are fearful that the whole factory will be penalized for her lack of cooperation.

*Luzon Mountain Boy* takes us to Northern Luzon, Philippines, where the rice paddies climb the steep mountains and every family must work faithfully and well if there is to be a good harvest — and when it does come, they give thanks in festive manner.

*Plains Indian Girl* will help children see something of the present reservation life of a lovely girl as well as show them how it was in olden days, according to the stories of the mission-

ary and the tribal dances she sees enacted.

These films have good photographic qualities. The wise user will preview them carefully and plan his introductory remarks so they will help his group see what he wants them to see and think what he wants them to think: That is, he must have a purpose for the film and help the film accomplish that purpose.

In one way these are not "missionary" films. In another way they are fine missionary films. In each the life

of the people is in some way being touched by Christian missionary work and love. This artful and oblique approach is needed. We have had plenty of clumsy, head-on presentations.

Being short, these films will be easy to use — in the church school, in the weekday schools, in the vacation church schools, in schools of missions, and in summer camps. It is hoped that they will be used on the TV stations. If they are, they will surely win their audience.

*See pictures on facing page*

If you want to give the people of your church, or your service club, a deeper understanding of the place of religion and conviction in the life of refugees — Hungarian, Polish, East German, etc. — show them the 40-minute intense and dramatic film, *What Price Freedom*. Shot in Berlin and East Germany, it shows something of the courage and intrigue behind the Iron Curtain. It is based on an actual incident. And if you need to "say" something on Southeast Asia, try saying it via the film *In the Face of Jeopardy*, a 28-minute color film which tells dramatically how an American mining engineer learned about the moral and spiritual texture of life in Malaya. Ours is a revolutionary faith in a revolution-prone world, so don't miss these two films. (From your local AV library or dealer; and if not, try Broadcasting and Film Commission, NCC, 220 Fifth Ave., N.Y. 1. Rentals for color versions: \$15 and \$12 respectively. Utilization guide on latter, by this reviewer, for 15c from Friendship Press, 257 Fourth Ave., N.Y. 10)

**Missionary Uses Mass Media**

In all corners of the world the mass media of communication are being used by missionaries and fraternal workers to carry the Gospel to all kinds of people under all kinds of circumstances. This is vividly shown by the following letter from Lars M. Ingulrud, Shizuoka Ken, Japan.

"Thank you for EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE. It is a very great help to me in my work. I am using the visual method to teach Christianity to the Japanese in rural villages. These people are conservative and resist evangelism as such. But we have found that if we show slides and movies their interest overcomes their doubts and they come. I am able thus to reach about ten times as many people.

"We have a panel truck with a large 60 amp generator and a 35 watt power plant. We also carry a 16mm magnetic tape movie projector, a 750 watt slide projector, a tape recorder and various amplifiers and speakers.

(How far we have come from the missionary of a generation ago with his Bible and a few charts and colored pictures!)

"I have a problem. The roads are terrible and the equipment shakes apart, especially the tape recorder. I

**EXCITING**  
 New  
**FILMSTRIPS**  
 for  
**YOUTH!**

Five sparkling new filmstrips with a strong Gospel appeal, especially designed for today's boys and girls. These new visual messages challenge boys and girls to live daily for the Lord Jesus and stress the need for the Gospel in other lands. Original scripts adapted from stories in MY COUNSELLOR, popular Sunday School paper. Fresh new modern art interpretations by topflight commercial illustrators, reproduced in brilliant colors. Each strip has 32 to 40 frames. An added feature is the optional correlated Gospel song at the end of each filmstrip.

**MISSIONS**

**THE LONG WAY TO TENANGO**—A little Mexican boy's dishonest scheme to make money plunges him into a quicksand trap and gives a missionary a chance to tell him about the Lord Jesus. M7412

**THE MAN WITH THE BIG STICK**—Two Christian schoolboys risk bodily harm to witness to others and the way is opened for the Gospel in a needy village of India. M7413

**THE WITCH DOCTOR'S CURSE**—An Ecuadorean Indian girl is almost frightened to death by curse until a missionary explains that God's Son made the only sacrifice necessary for sin. M7414

**CHRISTIAN LIVING**

**LIGHTNING AND OLD MAN MACY**—A little Christian newsboy shows an old man what it means to serve Jesus and is rewarded with a new bike. M7415

**SUSAN'S FIFTY CENTS**—A Junior High girl is tempted to keep money that doesn't belong to her but learns that God blesses those who forsake all sin. M7416

use it to teach hymns and play recordings in Japanese to go with the movies. I need it; what can I do?"

We happened to see the letter in which the service department of a tape recorder company gives him some advice. It goes like this: "A padding of several inches of foam rubber under the tape recorder may help. Also, you could rig up a hammock and set the tape recorder in it for these trips. This would probably offer the most protection. Again, you could have a carpenter build you a platform on springs, and attach the recorder to this."

If any of our readers have solutions they would like to suggest to Mr. Ingulsrud, send them along to him at 222 Kamikegawa Cho Hamamatsu Shi, Shizuoka Ken, Japan. He will be pleased to hear from you.

## Structured Interview Films

When will the mission board executives have the wit to produce short movie interviews of missionaries and fraternal workers and their families when they return on furloughs?

We still follow the old pattern with variations, of course. But pretty largely they are trotted here and there to meet speaking engagements and tell "the churches" about their work and drum up support. And this is good, as far as it goes.

In wearing out missionary personnel, and their families, it sometimes goes too far. In getting what these wonderful people have to say out across the church, it does not go nearly far enough.

With a little planning and know-how these missionary people could be interviewed before movie cameras and the resultant films be made available to churches and TV stations all across the country.

Of course these interviews would need to be structured. A definite purpose and emphasis for each will need to be formulated to guide all who work out the details. All aspects of a missionary's life and work need not be treated in one film. Let different interviews accent the various phases of his complicated vocation.

While spontaneity must be achieved, there must be planning and structure to give compactness and punch. If the questions are formulated ahead of time and studied by the missionary, he will be able to answer more readily. He can have on hand the objects, pictures and charts which will be needed to give increments of interest and reality.

It is altogether possible that in some instances the whole family will be interviewed. Children and young

people can have interesting and important things to say, given a little sympathetic guidance by an interviewer with know-how and time to prepare.

And these productions need not be expensive. They should be kept to 13½ minutes in order to fit into church utilization easily and be available for TV. They should, of course, be shot in a studio with good equipment.

According to the Rev. Anson Moorhouse, of the Berkeley Studios of the United Church of Canada, some pioneering in this type of film has already been done. He says, "The sky is the limit for techniques. We have done only four, but we can see where they will have tremendous value. We expect to improve as we go. With films like this, more churches can be reached, the missionary and his family can be spared a great deal of travel, and his furlough time used for rest, study, recreation and renewal. He will, of course, continue to speak before many groups in person."

What board will be the first to produce these structured interview films in the States? Perhaps this is a task that the Broadcasting and Film Commission of the NCC should undertake since it should be able to muster easily the people with the imagination and the know-how to get the job under way.

## Film & Filmstrip Notes

• The men of your church will like the 18-minute film, *The Suez Canal*, available from the Louis deRochemont Associates Film Library, 13 East 37th Street, N. Y. 16, or your local film library at a rental of \$10 for color; \$6 for B&W.

Contents: Historic overview on basic purpose and construction and documentary shots of present day operation and maintenance. This film is not geared to the present situation but gives excellent perspective for its understanding.

Highly recommended for the adult groups and clubs of the church and community, especially to give background for forums and speakers dealing with aspects of the present difficulties in the Near East. It has good technical qualities from beginning to end.

• *Gift for My Son* was produced by the Missions Council of the Congregational Christian Churches, 287 Fourth Ave., N. Y. 10. It deals with that broad and complicated theme, stewardship. In it we see a Mr. Edgar, important man about the town and a kingpin of many laudable causes and projects, failing to carry over into his church and home relationships the basic attitudes of Christian stewardship. How he gets straightened out is the stuff of the film. There is too much rambling, too much talking, too much general looseness of the mental joints for the film to be as effectual as it should have been. This reviewer gets the impression that the client failed to formulate a hard-core statement of purpose for the film which could guide both him and the producer.

• SVE's "Meaning of Christmas" is a good and useful series. Beamed at Juniors and Junior Highers, these four filmstrips can be adapted to meet the needs of Primary children, and standing as they are, they will be appreciated by adults.

• *Indians for Thanksgiving*, produced by SVE, is a 49-frame color filmstrip with an LP recorded commentary. It's for children 6-11 whether in church, school, or community clubs. The art is pleasing (by Janet Smalley) and the commentary is interestingly spoken.

The story concerns several little Pilgrim girls in New England in "Indian Days." When their parents are away, a little Indian boy wanders to their house. They take him in, warm and feed him, and when he falls asleep, they, too, doze a bit. That's the picture the Indian father sees as he peeks in.

concerned, many attics yielded apparel of fifty years ago; however, the lace shawls worn by the women of that day are still being worn today. Even Bastille Day was recreated in the town square of Auvers just as Van Gogh might have seen it several decades ago; it was complete with a colorful band, puppet show, merry-go-round, and street dancing.

Many of the world-renowned paintings of Van Gogh are shown in all of their exaggerated colors. One sees such masterpieces as "The Potato Eaters," "Sunflowers with Yellow Background," "Starry Night," "Blackbirds in a Field of Wheat," "Yellow Bridge at Arles," several self-portraits, and many others unidentified by the narrator. In addition to viewing Vincent's interpretations of the many sights he loved, one sees the actual buildings, trees, fields, and locations which inspired him. There are the yellow bridge at Arles, the gnarled roots of the olive trees, the courthouse at Auvers, the 200 year old vicarage at Neunen, the inn in Auvers which he called home, and the yellow house in Arles which he shared with Paul Gauguin; the viewer even meets an old lady who knew the great painter and had seen one of his paintings.

The film points out that of the hundreds of paintings he created, Van Gogh sold only one of them during his lifetime and concludes with the fact that he committed suicide at Auvers after completing his last painting, "Blackbirds in a Field of Wheat."

## Appraisal

*Van Gogh: Darkness Into Light* is not the story of the painter's complete life, but, rather, a combination of the problems encountered in the filming of biography and a brief account of some of the important events in his life from his role as an evangelist in the Borinage coal-mining district to his ultimate destination as a creator of pictures with compelling beauty. Indeed, his artistic growth which ranged from the somber hues of his Dutch period to the unreal brilliance of his later works tended to be analogous with his hope for the coal miners of Belgium, in whose behalf, he said, "To take the trail from darkness into light, that is the path I have chosen." The producers of this film admit that it serves dual purposes — to publicize *Lust for Life*

## VAN GOGH: DARKNESS INTO LIGHT

(McGraw-Hill Book Co., 330 West 42nd St., New York 36, N. Y.) 20 minutes, 16mm, sound, color, 1956. Produced by Metro-Goldwyn-Mayer Pictures. \$100. Film Guide available.

### Description

*Van Gogh: Darkness Into Light* contrasts the vivid colors of Vincent Van Gogh's paintings with the actual Belgian, Dutch, and French scenes which inspired him. In doing this, it shows the many problems confronted by a motion picture company when it filmed *A Lust for Life*, the biography of Van Gogh written by Irving Stone. Dore Scharly, studio executive and narrator for the film, recounts these many difficulties and serves as guide while the

camera takes one on a tour of the actual locations in Europe which Van Gogh painted.

As Mr. Scharly points out, this was not an easy task. Many of the locations had to be re-built as was the case with the yellow house in Arles. Using one of Van Gogh's paintings as a blueprint, workmen reconstructed the front and side walls of the house on the exact spot where it had stood in the painter's day. In two instances, they had to plant large trees which no longer exist but appear in "Vincent's" paintings. Character actors had to be secured who resembled those appearing in Van Gogh's pictures. Such was the case with the superintendent of the asylum at St. Remy. After much searching, the producers found such a man by the flower stall in the busy market place. As far as costumes were

and to impart information about Van Gogh. In this dual role it shows many complexities of modern motion picture making plus the fascination of Van Gogh's life and paintings. As an introductory film in the study of Van Gogh's art, it is useful for groups from the junior high through adult levels. It is equally valuable as a method of illustrating some problems and techniques of film production to college classes. For advanced study of art, the film does a skillful job of showing Van Gogh's paintings in comparison with the actual locales painted. Technically, the film has little to decry; although, in one or two scenes which were taken directly from the feature length production, the differences in the quality of the color are obvious.

— O. E. Bismeyer, Jr.

## LET'S MEASURE: PINTS, QUARTS, AND GALLONS

(Coronet Instructional Films, Coronet Building, Chicago 1, Illinois) 11 minutes, 16mm, sound, color or black and white, 1956, \$100 or \$55. Teacher's guide available.

### Description

When the film opens, Ricky is returning from the store with the ingredients for punch for his sister's birthday party. He has one quart of pineapple juice and a quart of orange juice concentrate which the grocery clerk has assured him will make into a gallon. Watching Mother dilute the concentrated orange juice in a gallon jug, Ricky wonders what quarts and gallons are. Mother explains that they are measures of things that pour, things called liquids. Ricky remembers hearing his father talk about gallons: five gallons of gasoline for the car, ten-gallon cans of milk at the dairy farm.

Left alone in the kitchen, Ricky wants to know if all quarts are the same. He finds a quart milk bottle and uses a quart measure to check. Pretending the water from the faucet is orange juice, Ricky fills the milk bottle and both juice cans from the measuring cup and is convinced all quarts are the same, regardless of shape. As he counts the quart marks on the side of the gallon jug, he realizes that his four containers—the two cans, the milk bottle, and the quart measure—would just fill the jug.

Now Ricky starts wondering what makes up a quart. With a pint milk bottle and using orange juice from the tap he finds it takes two pints to make a quart. While superimposing numerals and figures over each container, the film explains that since each quart

## Best Selling Movie Viewer

..... Top Quality at \$49.50

Inspect your pictures comfortably in a lighted room on the CRAIG Viewer's 3¼" by 4¼" hooded screen with its 75-watt projection lamp. Threads straight, left to right, on stainless steel film guide that doesn't touch pictures. Built-in frame marker clearly spots the right frame without notching or punching. Convenient focusing and framing adjustments. Lamp switches on automatically when film gate is closed. Dual cooling system lets you view a single frame indefinitely without damaging film or emulsion. Rugged metal construction. Far and away the most popular viewer for black and white or color, sound or silent. Models for either 8mm or 16mm film.

### Time Your Movies to .001 Minute

A CRAIG Frame Counter on your viewer or Projecto-Editor makes it easy to time filmed action to fractions of seconds or time scenes, sequences or complete movies accurately.

is made up of two pints, it would take eight pints to fill the gallon jug.

An animation sequence reviews the relationships considered to this point in the film. First a gallon jug is filled with orange juice. While the narrator points out that this is enough juice to make four quarts, the jug empties and the four quart bottles fill. Then, as the quarts empty and the eight pints fill, the narrator explains that since each quart holds two pints, all four contain enough juice to fill eight pints.

Ricky recalls another measure his mother has used. When Mother wanted to measure a cup of milk for the birthday cake, Jane handed her a coffee cup. Mother explained that only a special cup, a marked measuring cup, should be used while following a recipe. Ricky stops pretending the water is orange juice so he can empty the quart measure. He finds that two of the measuring cups fill the quart measure to the one pint line.

On the next shopping trip, Ricky and Jane find bottles of milk larger than a quart but less than a gallon. They decide these must be half-gallons. When they read the label on the bottle, "one-half gal.," the narrator explains that "gal." is sometimes used to mean gallon. As they inspect the other shapes and sizes of milk containers, both bottles and paper cartons, the narrator explains the abbreviations used for the other measures covered. Ricky and Jane decide to start a collection of different measures and the narrator encourages the viewers to start one of their own. The film concludes with the question, "Wouldn't you like to learn more about measuring liquids?"

### Appraisal

Primary teachers ready to discuss the relationships of liquid measure with their classes will find this film useful. The committee felt that in classes with arithmetic areas where children can examine and compare these measures the film will be useful to introduce and to summarize this concept. Classes without facilities for first hand experiences should find it even more helpful, for the presentation is vivid and the principal points are emphasized several times by different approaches. The kitchen setting is believable for it is neither more or less elaborate than that to be found in many suburban homes. There is plenty of room for self-identification, for Ricky is a normal appearing, primary-age youngster who does all the pouring and comparing himself while alone in the kitchen.

Technically, the sound, photography, and color are very good. Most of the committee did not feel that color is essential though it does make the "orange juice from the kitchen tap" sequence more believable. It also re-

veals a brief moment when the tap runs water while the bottle fills with orange juice.

Two other films in this measuring series are *Let's Measure: Ounces, Pounds, and Tons* and *Let's Measure: Inches, Feet, and Yards*.

—Fred E. Williams

## FOOD GETTING AMONG ANIMALS

(Moody Institute of Science, Educational Film Division, 11428 Santa Monica Boulevard, Los Angeles 25, California) 14 minutes, 16mm, sound, color or black and white, \$90 and \$45. 1956. Teacher's guide available.

### Description

This film is primarily concerned with the eating habits of five rather unusual animals and the unique ways in which they get their food; it shows that though the need for food is universal, the eating habits of animals are one of the most diverse studies in nature. "God has employed a seemingly endless variety of physical differences to accommodate his creatures to their environment."

The film opens with the food selections of some of the more common animals. The major portion of the film, however, deals about equally with the quest for food of the anteater, the rattlesnake, the gooseneck barnacle, the archer fish, and the chameleon.

The anteater sequence depicts the anteater's long razor sharp claws which are just the tools he needs for tearing open old stumps and tree trunks loaded with ants and termites. In addition, he has a long flexible tongue which he uses to thrust deeply into insect burrows, trapping the tiny creatures on its sticky surface and drawing them into his mouth. The anteater climbs a tree where he is able to catch and eat his food while holding onto his perch with his powerful tail.

The rattlesnake sequence shows that man has long observed that the rattlesnake has been able to strike at and hit prey in the dark. A laboratory experiment shows how this feat is made possible by the presence of a set of organs which are located in pits or depressions on either side of the snake's head. These organs are sensitive to heat thus enabling it to locate its living food. Using an anesthetized, blindfolded rattlesnake with platinum electrodes attached to the nerves connected with these sensitive pit organs, the film shows the response of the snake's nervous system to the closeness of a human hand, a lighted match protected and unprotected alternately by a piece of heat absorbing glass, and an ice cube. This phenomenon was accomplished by converting the electrical impulses

of the snake's nervous system by the various stimuli into audible sound by means of an attached amplifier and by attaching a connection from the snake's nervous system to a pen which charted the intensity of the stimulation upon a moving graph.

The gooseneck barnacle sequence opens with a scene of the rolling sea, a view of microscopic plants and animals, a location where barnacles may be found, then a close-up of a cluster of barnacles. The picture then narrows down to an individual barnacle. The narration states that the sea barnacle spends its entire adult life permanently fixed in one place, and the main part of its body is encased in a protective shell. Shows that when water covers the animal, the plume-like legs of the animal are extended to trap tiny planktons. The legs (cirri) are drawn into the shell, and the food is carried into the barnacle's mouth. The barnacle has been described as, "an animal that stands on its head and kicks food into its mouth with its feet."

The archer fish is seen demonstrating his remarkable ability of being able to shoot a jet of water from his mouth like a bullet. The prey is stunned by the force of the water and drops to the surface below. The film points out that, "the computations necessary for such a feat seem utterly fantastic, but the archer fish has been endowed by the creator with an inborn skill that enables it to obtain food that otherwise would be completely out of reach."

The fifth major food-getting sequence describes the chameleon as the only animal that can lasso its food more than a body's length away without moving anything but its tongue. This lizard's tongue is "something like a lariat shot from a cannon." With close-up photography, the eyes are shown as being much like ball turrets in that they protrude and operate quite independently. While one eye may search for an enemy, the other may be hunting for a tasty morsel of food. The narration explains that the chameleon's skin is a heavy plate of armor. The film shows that it is able to respond to exterior stimuli by rapidly changing color. "Baby chameleons, just a few hours old, are already out on their own, making use of all the specialized equipment that God has given them."

The film closes with the thought that, "everywhere in nature we see the unmistakable evidence of God's creative wisdom. The eating habits of His creatures are among the commonplace things that speak so eloquently of God's desire and thoughtfulness." The film ends with a scene of the family at the dining table; "Man shall not live by bread alone, but by every word that proceedeth out of the mouth of God."

## — ANOTHER TSI FIRST —

## Appraisal

The committee felt that the film was appealing and beautifully produced with excellent close-up photography, appropriate music, effective narration, and expert editing. The five rather unusual creatures which are presented as examples of the diverse eating habits of animals help to make the film an interesting teaching device. It should delight and hold the attention of any group from elementary school through adult education and probably adult church groups. Its primary audience seems to be junior and senior high students. The committee judging the film felt that the producers used materials that the teacher could not easily duplicate in a classroom. It should be noted that some of the statements in the film which are part of a general truth are presented in such a manner as to cause the viewer to think that the whole of the matter has been discussed when it has not. It should also be noted that the film approaches the subject matter of natural science stressing more the great broad plan behind the existence and the unusual adaptations of these creatures to life, rather than enumerating the facts that mankind knows and understands about these animals. It is concerned with such questions as: Why is the anteater so perfectly equipped and protected for his pursuit of his peculiar diet and why does the rattlesnake have organs that give it its peculiar sensitivity to heat? The answers to such questions probably never will be fully explained, for they are basically the ancient and yet unsolvable question of the nature of life itself. The film never loses sight of this

fact — that the nature of life itself is in the being of God the Creator. The producer states that this film, which is one of a series, is intended to be, "a science teaching tool that will reinforce the moral and spiritual values of the science curriculum and direct the student to (1) wonder and beauty in the commonplace, (2) awe-inspiring natural laws, and (3) design in nature." The committee felt that it did seem to be intended mainly for appreciation of science generally, and for motivation in that field, rather than for detailed instruction, and that for these purposes it succeeds admirably.

— Wayne Howell

## THE UNION OF SOUTH AFRICA

(Encyclopaedia Britannica Films, Inc., 1150 Wilmette Avenue, Wilmette, Illinois) 17 min, 16mm, sound, black and white or color, \$75 or \$150. 1956.

### Description

This film tells the story of the Union of South Africa — its people, land, products, and industries. The opening scene is a map of Africa, and attention is directed to the Cape of Good Hope where three oceans meet. The harbor of Capetown, a port which links sea trade between the West and the Orient is shown next.

The narrator gives a brief history of the rugged country and describes it as a land of variety — one which has steep mountains and a vast inland plateau that is partly grassy veld and partly barren desert. The narrator tells us that the Union has approximately

TELEPHONE DEARBORN 2-6286

twelve million inhabitants, and we see representatives of the various racial groups. It is also pointed out that there are less than two million people of European origin living in the country.

Through the camera we now see a native village on one of the reserves. Here we meet a family household—N'gana the husband, his three wives, and their unmarried children. We get a more intimate knowledge of native tribal life as we see the family's group of huts, one of which is set aside for each wife and her children. Next we see a tribal dance ceremony where adolescent boys are being initiated into the responsibilities of adult life. We are told that the men and boys tend the cattle while the girls and women do the housework and harvest the crops.

The scene changes to show local tribal government in action under the leadership of a Paramount Chief. The chief rules according to tribal customs which are subordinate to the laws of South Africa.

The next shift in scenery takes us to the farm country of Transvaal, the land of the European farmers. These people are the descendants of Dutch settlers who came to the country more than a century ago. Here we see activities on the three-thousand-acre farm

of Jan Van Niekerk. He is master of the fifty native families who work for him. Corn is his chief crop, and he raises great herds of cattle and sheep since wool provides one of the major exports.

The Van Niekerks live in a large, comfortable, well-furnished house, have native domestic servants, and own several late-model automobiles. Much of the farm work is done with tractors and other machinery which has been imported from Europe and America.

We see something of the family life of the natives who work for Mr. Van Niekerk. In exchange for their labor, they receive small wages, rations of food, houses to live in, and vegetable garden plots. The narrator explains that these natives work on a contract basis, cannot leave the farm without a pass, and must get permission before moving from one farm to another.

Our attention is now directed to a map which shows the location of Johannesburg, the largest city in South Africa. Through the narration we are told that this great city is a center for the gold and diamond mining industries of the region. As the narrator points out the fact that the Union of South Africa furnishes sixty per cent of the world's gold supply, we see molten gold being poured into molds to cool. Labor in the mines and re-

fineries is done by natives who come from the reserves. The narrator explains that these workers must live in compounds built by the mine companies and that their lives are closely regulated. According to South African law, no native can leave company property without permission.

Natives who are employed in other industries and in domestic households are required by law to live in special sections set apart from the rest of the city. We now see some of the things which make city life more and more attractive to the natives. These allurements include recreational places for adults, theaters, libraries, and free schools for the children.

As the film continues we see scenes which are typical of urban life among the Europeans. These include some of the up-to-date schools, beautiful churches, modern apartment buildings, and attractive, well-stocked stores. Another change of scenes takes us to Durban, a settlement for many Asiatic people who have come to the country. In the surrounding fertile region citrus fruits and grapes for wine are grown. Two other important cities of the Union are shown—Pretoria, the administrative capital, and Cape Town, the legislative capital where the South African Parliament meets. The narrator tells us that the dark-skinned peo-

ple of the Union have little representation in their country's government.

As the film closes we see a nurse giving instructions to a group of natives, and the narrator reminds us that South Africa is one of our good neighbors.

#### Appraisal

This film will undoubtedly give a new and favorable impression to many persons who might have had a distorted concept of the Union of South Africa. This is especially true of the part which shows the large modern cities with their wide streets, lovely

park, beautiful residential areas, and up-to-date schools. The narrator refers to the happy state of the natives who are rapidly taking on the white man's way, but one is led to wonder about this when in contradiction he refers to severe restrictions on their freedom of movement from place to place, and the rigorous measures which force them to live on special reserves or compounds. In spite of this, the film should have a strong appeal to elementary and secondary teachers of geography and social studies.

—*Pearl Walker Headd*

class which has already passed his own point of accomplishment.

#### Songs in French

One of the most charming records we have heard in a long time, "Songs in French for Children" (Columbia Records, Bridgeport, Connecticut) consists of twenty familiar folk songs magnificently delivered. This recording is fine for class use with elementary or junior high groups studying the language, or studying folk songs. Although no text is supplied with the record, none is really needed because the performance is so very delightful. American children particularly will recognize "The Farmer in the Dell" and "Who's Afraid of the Big Bad Wolf" although the words will be strange. Other songs of interest to the language teacher include "Sur le pont a'Avignon" and "L'Alouette." Particular credit must be given to the performing artists, Lucienne Vernay and Les Quatres Barbus, whose delivery gives this recording its great charm.

Another Columbia recording, "French for Travel" (Columbia Records, Bridgeport, Connecticut), is useful only to the adult reviewing the French language with travel anticipated. The school uses are limited, although as a quick review for travelers, it has some merits.

"Listen and Learn French" (Dover Records, New York) is an entirely new album in the language instructional field. Dover has been publishing, and continues to publish, short recordings for quick study which are of limited school value. However, their "Listen

## SOUND advice

### about audio materials and equipment

by **MAX U. BILDERSEE**

#### Foreign Language Recordings

The abundance and variety of foreign language recordings suitable for instructional applications continue to surprise us. We have in the past offered rather complete reports on the discs available; we recently had reason to re-investigate the field and found several new recordings worthy of your consideration. In the foreign language field there is an "embarrassment of riches" which is at once a comfort and a challenge to the language instructor.

It is comforting to know that much is available. It is comforting to know that so much attention has been paid to the foreign language field and that more than two dozen manufacturers have issued records for language instruction. And it is a challenge—a challenge to know the field and to make the correct selection. And it is a challenge to use the correct records at the right time with the most telling effect.

In general recordings designed to accompany particular recognized school texts, and consequently increasing in relative difficulty, will be most useful for classroom instruction. Recordings essentially designed for individual or home study are in general less applicable to the classroom situation, al-

though in libraries these recordings may be very useful. As supplementary material they offer many advantages, for they may be used to encourage the precocious student to expand his vocabulary. They may be used, too, to help some students catch up to a

The *right* recording at the *right* time!

## AUDIO EDUCATION

recordings are a "shot in the arm" for classes at all levels of instruction. From the first grade through high school, **Audio Education, Inc.**, has the right recording for your particular classroom needs. There are many sparkling recordings to stimulate interest, aid comprehension, and enrich your teaching program. Featuring music, rhythms, and the language arts, these **Audio Education** recordings provide the answer to your quest for more effective ways of teaching.

NEW YORK 3, NEW YORK

# audiotape offers EVERYTHING

*you want or need for educational recording!*

**UNIFORM QUALITY AND MINIMUM COST**—PLASTIC-BASE AUDIO-TAPE on 1½-mil cellulose acetate, meets the most exacting requirements of the professional or educational recordist at minimum cost. Known the world over for matchless performance and consistent, uniform quality.

**PREMIUM QUALITY AND GREATEST STRENGTH**—AUDIO-TAPE ON 1½-MIL MYLAR\* is a premium quality professional tape that provides the utmost in mechanical strength and immunity to temperature and humidity. Will not dry out or embrittle with age.

**50% MORE RECORDING TIME AND SUPER DURABILITY**—LR AUDIOTAPE on 1-mil Mylar gives 50% more recording time per reel. The strong super-durable polyester film base assures trouble-free operation even under severe conditions of heat and humidity.

**50% MORE RECORDING TIME AND MAXIMUM ECONOMY**—PLASTIC-BASE LR AUDIOTAPE provides fifty percent more recording and playback time on low-cost 1-mil cellulose acetate base, affording maximum economy on applications where high strength is not required.

**TWICE AS MUCH RECORDING TIME**—SUPER-THIN AUDIOTAPE on ½-mil Mylar gives twice as much recording time per reel as standard

plastic-base tape. Suitable for extended-play applications where tape tension is not excessive.

**NO MATTER WHAT YOUR EDUCATIONAL APPLICATION, REGARDLESS OF THE TYPE OF RECORDER, THE COMPLETENESS OF THE AUDIOTAPE LINE AND THE HIGH STANDARD OF AUDIOTAPE QUALITY ASSURE YOU OF BEST RESULTS.**

\*Trademark, DuPont polyester film

New York 22, N.Y.

and Learn French" may be useful in many classrooms and in library collections. These recordings are most useful for individual study and are deliberately oriented to travel situations. Pronunciation and enunciation are excellent, and the vocabulary offered is practical and useful.

The Dover Publishing Company has announced that similar albums will soon be ready in German, Italian and Spanish for students of those languages.

## Introduction to German

"Introduction to German" (Wilmac Recorders, Pasadena, California) is designed to accompany, and is useful when employed in conjunction with, the text of the same title, revised edition, by Harry Steinhauer and William Sundermayer. The text is published by the Macmillan Company and is available from them. The recording offers classes an opportunity to hear German well pronounced, and to imitate what is heard. This recording is a creditable first effort at cooperation between a record publisher (Wilmac) and a book publisher (Macmillan).

Language study must be fun to be successful. The student who drags through any study may learn the necessary data to pass an examination and fail completely to understand and appreciate what has been learned. The German student can learn words, sen-

tences and grammar, he can memorize poetry and sing German songs and still not learn German. For if the student doesn't enjoy the learning experience he cannot readily apply the learning. The recording, "Gems of Wit, Wisdom and Beauty in German" (SMC, Pro-Arte, New York), can be used to add part of the ingredient of fun in learning. It offers very good delivery of interesting and miscellaneous material not associated with any textbooks. This is a potpourri of proverbs, songs, tongue-twisters and so forth and in instruction should be used a little at a time. The record will be useful in class, in language laboratories, and in library record collections. It may be used for extra curricular listening, for class enjoyment and by advanced students listening alone it may be used for comprehension practice. This is one of a number of foreign language recordings offered by Pro-Arte and sold by the Spanish Music Center, 1291

Avenue of the Americas, New York 19. It may be worthwhile to investigate their complete catalog of language recordings. Some in Spanish are reported on below.

## The Hebrew Language

But before we list and report on some new Spanish records, we would like to mention one of the finest recordings we've heard lately. This is a language recording which can be appropriately used not only in specialized language classes, but in English classes and History classes as well. It is titled "The Hebrew Language" and is available on disc from Folkways Records and Service Corporation and on tape from Phonotapes, Inc., both of New York City. The recording is mostly in English and is a thoughtfully prepared lecture in comparative language by Professor Theodore H. Gaster. The recording is an interesting, even engrossing, and useful history of the language. It can be used by secondary schools and more adult students.

## Beginning Spanish

"Beginning Spanish Course" (D. C. Heath Company, Boston and New York) is designed to accompany the textbook "Beginning Spanish Course" by Donald K. Barton and Richard W. Tyler. The recordings offer a good

Dealer and Distributor  
Inquiries Invited.

variety of male and female voices demonstrating excellent Latin-American pronunciations. There is opportunity for class participation through repetition of recorded statements. The recordings also include sections intended for aural comprehension only.

D. C. Heath also publishes "Pasos por el Mundo Espanol" intended as a companion to Book One of the textbook of the same name by Switzer, Woolsey and Harrison. These recordings do not include sections intended for aural comprehension only, but they do offer a good variety of male and female voices demonstrating Latin-American pronunciations and there is opportunity for the class to participate through listening and then repeating what has been heard. Both sets of recordings have good school potentials, and used with the appropriate textbooks offer much to the instructional program. However, if other textbooks are used, the value of the recordings is severely limited unless they are incorporated, with the

text, in a library collection or language laboratory situation.

The Spanish Music Center offers two recordings which will interest school personnel. "Mexican Folk Songs" is an excellent recording of ten well known Mexican folk songs, with appropriate and excellent guitar accompaniment. High school students will enjoy this recording, and it will serve the end of adding pleasure to the study of the language. More mature students will thoroughly enjoy and appreciate "Antologia Poetica por Federico Garcia Lorca." This is a magnificent reading of Federico Garcia Lorca's poetry by Jose Jorda with an excellent guitar accompaniment by Juan Martinez. Students of the language will thrill to these superb dramatic readings. The pronunciation offered, most appropriately, is pure Castilian and the performance will of course serve to arouse interest in fine Castilian poetry. Conversely "Panorama Poetico Espanol," also offered by the Spanish Music Center, lacks drama and rhythm. It is

poetry, read as though it were prose, and will be of minimum interest to schools.

Spanish classes in senior high schools and in colleges may find the new recording, "Spanish Pronunciation" (Wilmac Recorders, Pasadena, California) useful for laboratory practice. This is a recording intended for beginners and is therefore quite simple and limited in scope.

Spanish Music Center's "Literatura Columbiana" is mainly useful for college classes and for adults listening alone. It offers a literary recital of high quality. There are fifty minutes of reading from the works of Columbia authors. The recitalist, Andrés Berger-Kiss, is a native of Colombia and has written several of the selections offered on the disc.

### The Latin Language

"Caesar (Folkways Records and Service Corporation disc and Phonotapes, Inc. tape) is an excellent lecture on Julius Caesar featuring eleven readings from the "Gallic Wars," making a total of several pages of Latin text. The Latin text is extremely well read by Moses Hadas. The recording may be used in many ways but should be extremely effective in arousing interest in Caesar and the Latin language. The recording may also effectively be used as an excellent model of Latin pronunciation.

### In Three Parts

The language recordings we have reviewed, and they now amount to more than two hundred, fall into three easily definable classes. First, from the school standpoint, are those associated with recognized textbooks. Secondly, there is the group which offer both entertainment and cultural enrichment, and finally there are those which are most akin to "cram sessions" and may be useful in language laboratories, and library collections. They are useful also for adults studying alone and in small groups. It would seem that, in the selection of language textbooks as well as in other curricular materials in all study areas, it should be the responsibility of those making the choice to be aware of and to evaluate the recorded materials available before any final decisions are made.

## This AV Center Serves the Whole Community

Continued from page 71

and over the desks of the branch libraries the Center distributes subject area supplements. In the past, special areas covered in this manner have been Safety, Health, Speech, Industrial Arts, English Language, Art, and Commercial Education. In the planning stages is a supplement on Driver Education. While the Center's master catalog includes some 1100 film titles, additional catalogs have been prepared for the Primary Grades, and a special Adult Catalog is available. These specialized listings and supplements have met with wide approval among the library's clients.

With a wealth of information available for the potential film user the Center provides previewing privileges. On a few days' notice a film may be previewed at the Center, itself. Otherwise, a film may be picked up and returned on a one day basis for preview elsewhere.

While the bulk of service to the community will continue to be in terms of motion pictures, the Center is perceptive to the needs of the ever-growing Wayne County population. The increasing use of the tape recorder in education has stimulated the development of a master tape operation. The Center has obtained tape duplication equipment this year and master tapes from educational sources throughout the country are being collected. Schools and other institutions may send a blank tape to the Center and indicate which program is desired from the catalog. For a small service charge the program will be recorded and returned to the school.

Against the two reels of film which inaugurated the Audio-Visual Center, Wayne County Library, in 1953, the film collection now boasts a dollar inventory value in excess of \$100,000, with approximately 1100 film titles. Monthly circulation, per film title shipment, has been rapidly approaching the thousand mark.

Income from film services of the Center revert to the Wayne County general fund. However, the operating budget of the Center is part of the County Library budget which in turn is derived from Wayne County taxes.

In order to provide immediate availability of many films which would otherwise be prohibited in cost, the budget of the Center has included the purchase of many films on four-year contracts.

In the light of increased population and wide acceptance of the value of the Center to community well-being,

the Wayne County Library system is planning a new headquarters building. This building will be closer to the center of the out-county population and its facilities will serve the central library staff, the extension department, the department for the blind, and the Audio-Visual Center. With this move in the future, the Audio-Visual Center will have about four times its present space for work and storage, or about 4000 square feet.

Increase in space and expansion of services suggest the addition of staff on the professional level. The Center will continue to explore those possible services which are necessary and which are capable of community-wide application and use. Even now the Center has developed the beginning of a motion pictures archives collection.

The operation and growth of the Audio-Visual Center, Wayne County Library, are in many ways still a pioneer venture. Its future is assured, however, by the continuing recognition it receives. While this pattern of growth and organization of audio-visual service closely tied in with a county library system has limited application to many areas throughout the county, it nonetheless demonstrates the successful solution to a community problem.

Audio-visual instructional materials have been brought close to the user, located near him, and made available by phone. Through this operation the library gets maximum utility of its prints, and can still provide most films a day in advance of the expected use in the school or community group. Personal knowledge of film users in the community makes for better relationships for the library and helps toward more effective programming for specific needs. Through the mail and the 20 branch libraries the Audio-Visual Center has many fingers of rapid distribution in the community. Located on a main thoroughfare the Center is within a few minutes of practically everyone.

In three short years the County Board of Education and the County Library Audio-Visual Center have effected a strong, and valuable, right arm to the school and adult populations, not only in making available a large variety of films to almost a million people in an urban area, but also in making sure that those who use such materials, whether for education, information, or research, in school, club and the like, are getting the best out of the library's materials.

## College Libraries Need AV Materials

*Continued from page 74*

There is probably some advantage in the college library as an organizational unit providing audio-visual aids and services to the whole institution so that students and staff may obtain a one-stop service. However, many institutions of higher education have provided such audio-visual services satisfactorily through a variety of other administrative organizations including:

- (1) An independent department, bureau, service, or agency reporting directly to the president, as at the University of Buffalo.
- (2) A department in the extension division, as at the University of Oklahoma.
- (3) A department in the college or school of education, as the University of Connecticut, or at Pennsylvania State University.
- (4) A branch of bureau of educational research and school services, as at Ohio State.
- (5) A department of the library, as at the University of Omaha.

A particularly important consideration in assuming responsibility for audio-visual aids functions is the training of the personnel who will carry on the work. The functions should exist where there are trained personnel, or where existing personnel are willing to undertake the necessary training.

As an illustration of some of the things a college library may do with audio-visual aids, part of the plans for the new College of Education building at the University of Tennessee may be of interest. In this building is to be provided an education library—a room containing almost 5000 square feet of space. In this room there will be the reserve and other education book collection, bound and current periodical collection, education reference tools, and the Library Service Department collections of materials normally found in elementary and high school libraries. All these will be housed on open shelves or in open

stacks. In addition in this same room will be a phonograph record collection and space for six students to audition records, a tape recording collection also with space for two students to audition tapes, a filmstrip collection with two individual previewers provided at the tables, a slide collection also with an individual previewer at a table. A vertical file for pictures and pamphlets will be provided.

A large case for unfolded maps, charts and posters will also be provided. Just outside the entrance of the library room will be a 26' lighted and glass enclosed display case. Adjacent to the library will be an audio-visual laboratory, a combination projection room and sound recording room, a dark room, and an audio-visual work and storage room. Thus is found a wide range of materials available to staff and students from 8:00 a.m. until 10:00 p.m.

For perspective, let us take a brief backward look at the essence of what has been said:

First—Here is a job to be done—the provision of the audio-visual materials and services listed, to professors, researchers, students.

Second—Here is how some do it—by an independent bureau; by the extension division; by the College of Education; by the bureau of school services; by the library; or by a combination of these.

Third—Here are some cautions: Above all let's be sure the materials and services are provided somewhere in the college; let's be sure there are trained personnel where there are functions to be performed; let's put the functions where there are sympathetic, interested persons who can get the money to do the job; let's centralize where practicable for the sake of the user and for economy.

Fourth—In cooperation with the administration and departments concerned, libraries may find it wise to move in one or two steps at a time, making sure that a good start is made before biting off too big a chunk for the personnel and budget. This year one may want to start a tape collection or a map collection—next year it may be filmstrips or slide.

Finally—Do not fear that books and library budgets are in danger—they are not. The important point is that professors, researchers, and students be given ready access to ideas in all forms.

# MEYERCORD DECALS

FOR  
**Safety  
Helmets**

Meyercord Decals are used on safety helmets  
... in such applications as:

Designating skilled men who may work in  
certain danger areas • indicating number of  
years' service • characteristic trademark or design identifying  
employee • individual lettering showing wearer's initial or full  
name • use of color, shapes or imprinting for various  
identification and classification purposes • safety records, showing  
number of years safe operation or years without accidents

We will gladly tell you how firms  
in many industries are using Meyercord Decals  
to implement safety programs. Drop us a note.

# Wheelit! Don't Carry It!

## Now! Wheelits are available in both Folding and NON-Folding Types

**Non-Folding Wheelit #4102**  
En route with machine and supplies (above). In stationary position for school room film projection (below).

The new NON-Folding Wheelit is designed primarily for room to room, floor to floor service where storage space is not limited. Its sturdy footbrake holds it stationary for projection purposes, and it makes transportation of machines, books and school supplies easy and safe.

The Folding Wheelit is compact enough to fit easily into an auto trunk, closet or other limited storage space.

Wheelits are perfectly balanced for heavy loads, surprisingly easy to steer and maneuver. They go up or down stairs, over curbs, around close turns, through narrow doorways and aisles. Specifications for the new Non-Folding Wheelit include:

- All-steel construction (except platforms)
- Load capacity up to 300 pounds
- Top platform height — 41 inches
- Second platform height — 14 inches
- 12" rear wheels with semi-pneumatic tires
- 4" rubber-tired swivel casters in front
- Thick, sound-resisting platforms with scuff-resisting Formica tops
- Heavy web straps to secure loads
- Foot brake for stationary use

See Your Audio-Visual Education or School Supply Dealer.

## VICTOR HELPS YOU DEVELOP THE GREATEST RESOURCE OF ALL...

### With easy-to-operate, high-performance 16mm Sound Projectors

Never before has the need for adequate education had such far-reaching significance — and never before has there been such an acute pressure on teaching facilities. The increasing use of 16mm films has done much to answer both needs.

Because the effectiveness of 16mm film programs depends so heavily on the smooth continuity and technical quality of the sound and picture presentation, more and more educators are relying on Victor 16mm sound motion picture equipment. Simple to operate, the Victor projector features extreme portability, 3-spot threading and a fingertip control panel. Films are protected from damage by Victor's Safety Film Trips. And the clear pictures and sharp contrasts possible under classroom conditions, together with Victor's undistorted sound assure maximum impression and retention of the film story.

## VICTOR AUDIO-VISUAL AIDS

### VICTOR SOUND PROJECTORS

Available in three standard models: the Classmate 4, Assembly 10 and Sovereign 25.

### VICTOR ARC PROJECTOR

A portable arc projector that meets the needs of your largest assemblies. Supplies 1600 lumens on the screen, up to 25 watts speaker output.

### VICTOR SILENT 16

Rheostat speed control, 2000-foot reel capacity, and single switch reverse standard equipment. Takes any wide screen lens.

### VICTOR MAGNASCOPE V200T

A professional laboratory instrument that enlarges, projects microscopic specimens on wall screen or tabletop. Two classroom models available.

# "Hemo the Magnificent"

The fascinating story of blood and circulation

Dr. Frank Baxter and Richard Carlson in a scene from "Hemo the Magnificent"

## Second in the new TV Science Series that presented "Our Mr. Sun"

Following its presentation last fall, "Our Mr. Sun" was praised by educators everywhere as an imaginative and informative TV science drama.

On March 20 you will see the second program in this educational and entertaining series—"Hemo the Magnificent."

Combining actual photo-micrography with ingenious animation, "Hemo the Magnificent" dramatizes the vital roles of blood and circulation in the life

process. Scientific accuracy is assured by a distinguished Scientific Advisory Board and four eminent medical scientists who acted as special advisors. The program was produced and directed by Frank Capra, winner of three Academy Awards.

Everyone connected with education and science—students and teachers alike—will want to see "Hemo the Magnificent." Remind your students and colleagues to see it on Wednesday, March 20.

*Tune in this special science telecast on the **CBS-TV** network, **9-10 P.M., E.S.T., Wednesday, March 20.** Check local listings for time and station.*

## ...the new Flo-master felt tip pen

Teachers who use this all-purpose felt-tipped pen for visual aid and drawing projects often wonder how they ever got along without it. The Flo-master is a truly universal writing tool ... for paper, wood, glass, metal, cloth, rubber and even plastics. Whether you want to make visual aids, charts, graphs, maps, posters or flash cards ... or art or lettering, your Flo-master is always ready for instant action — and no clean-

up afterwards!

## On the SCREEN

### Cover: Man & Mouse

White rats demonstrate how alcohol destroys coordination in *None for the Road*, a new film for teenagers on drinking and driving being readied for spring release by Young America Films in cooperation with the Yale Center of Alcohol Studies.

### Comments on Contents

We think readers will find exceedingly interesting the talk by Walter Crewson printed on page 130. Mr. Crewson is a former school superintendent and was just recently appointed Associate Commissioner in the New York State Education Department. It is refreshing and encouraging to find a person so high on the educational echelon with so much understanding of audio-visual problems.

Francis Noel's "Letter from Paris" (page 134) was written to summarize his experience abroad and to follow up the letter he wrote us earlier (published in the October, 1956 *EdSCREEN* & *AVGUIDE*). This second letter was written shortly before he left Paris. By now he should be back on the job in the California State Department of Education.

"AV on the Double" (page 132) tells about one college where stimulation of further AV use is something of a joke, according to author Camille Baxter. We're sure that Miss Baxter herself is in no small way responsible for the lively use of audio-visuals she describes.

### Filmstrips on Review

As another step in expanding its service to readers, *EdSCREEN* & *AVGUIDE* presents in this issue (page 149) a new filmstrip review department under the editorship of Robert

Church, Walter Pilditch, and Harold Ward.

Mr. Church is Audio-Visual Coordinator at Herman Felsenthal Elementary School in Chicago. He has been a public school teacher for the last six years and has also taught audio-visual courses. He is a free-lance motion picture photographer.

Mr. Pilditch — co-coordinator at Felsenthal — has been an audio-visual assistant at Chicago Teachers College and has been teaching in the public schools for several years. Mr. Ward — also a Felsenthal co-coordinator — is an AV librarian and has taught in both high schools and elementary schools.

With the help of other teachers in Chicago, this team of reviewers will preview and briefly describe and evaluate new filmstrips for *EdSCREEN* & *AVGUIDE*. Review copies of filmstrips should be sent to Robert Church, Herman Felsenthal School, 4101 South Calumet Ave., Chicago 15, Illinois.

**A Lot of Good**

*Editor:* Congratulations on the excellence of the December, 1956 issue of your magazine. I enjoy each issue and get a lot of good from it. My occupation is teacher and AV Coordinator at the Des Moines Technical High School. Also for the last eight years I have been in charge of the Visual Aids Service of Westminster Church, whose membership is around 3400 . . . Tell Mr. Hockman that we appreciate his Church Department in your magazine.

Harry R. Peterson

Des Moines, Iowa

**Nail on the Head**

*Editor:* I should like to compliment you on your editorial in the December, 1956 issue of EDUCATIONAL SCREEN ("A Key to Greater Use of Audio-Visual Materials"). I think you hit the nail on the head in giving an explanation of why teachers do not make greater use of audio-visual materials. So many times I have heard teachers say, "I don't use films because there just aren't enough hours in the day to even cover the material in the textbook."

Donald Scott

Madison, Wisconsin

**How's That?**

*Editor:* In regard to the T. Robert Bassett article ("How to Run a Non-stop Show on One Projector") in the January issue, how's that again?

William T. Peters

Chief, Educational Film Division  
Detroit, Michigan Public Library

*Editor:* On page 14 of your January, 1957 issue (Mr. Bassett's article) appears some shocking advice that renders a great disservice to all who are interested in better film care. The writer, an obvious tyro, advises people to run "two or three minutes of film . . . onto the floor." I need not elaborate on the serious damage this sort of thing can do. May I urge that you consider rigid screening of similar advice in the future?

Frederick G. Beach

Manager, Visual Aids Department  
Remington Rand, New York, N.Y.

*Editor:* I would like to say a few words regarding an article appearing in the January, 1957 issue of your magazine, written by Mr. T. R. Bassett, entitled "How to Run a Non-stop Show on One Projector."

Speaking as a professional motion picture cameraman, I would like to point out that the procedure advocated in this article is not an accepted practice in professional circles and certainly

should not be attempted by anyone else.

In item 4 of Mr. Bassett's article he says, "When there remain about two or three minutes of film on the first reel, turn the handle on the spindle arm and run the film onto the floor until you reach the end of the reel." Mr. Bassett evidently does not realize the seriousness of this statement, because three minutes of film would total a length of 108 feet. This is unbelievable, because, for obvious reasons, no film should ever come in contact with the floor.

He further states that he removes the trailer (commonly referred to as "tail") from reel one and splices the end of reel one to reel two. If this procedure became common practice, the end and beginning scenes of each would eventually be destroyed. Mr. Bassett says that he uses Scotch tape to reinforce this splice, or "connection." Why does the splice need to be reinforced? The use of Scotch tape is of questionable value, also, due to the fact that Scotch tape may leave a deposit of adhesive which will accumulate dirt on the film and in the gate of the projector.

In item 5 he states that "Meanwhile, the film has been coming up off the floor from under the pile and you must keep an eye on it to catch any kinks that might form and carry a bunch of film toward the projector. This won't happen often and then only when the film is in poor condition. A simple shaking motion will loosen the film." ?? I wonder how many people have tramped on it, how many pieces of gum, hairpins, etc., etc., are also carried on to the projector?

By the time I read through item 7 and realized that reel 2 was going on  
(Continued on page 122)

"Are you sure you belong to the projectionists' club?"

*New films for the classroom  
from CORONET  
the world's largest producer  
of educational films*

**Early American Civilizations (Mayan, Aztec, Incan)**  
(1¼ reels) (Grades 5-12)

The cultural remains of the Mayans, Aztecs, and Incans, filmed at the original sites, attest to the highly developed civilizations of the Indians of early America. The contributions of these cultures to our own are clearly evidenced.

**Bicycle Safety Skills**  
(1 reel) (Grades 3-9)

With the help of the experienced Director of the Public Education Division of the National Safety Council, Jack C. Grieg, Coronet has produced an invaluable film for the teaching of bicycle safety skills. This clear presentation shows the performance techniques, traffic rules and procedures, and bicycle inspection practices that make safe cyclers today and good motorists tomorrow.

**Life of A Primitive People (Africa)**  
(1¼ reels) (Grades 4-9)

The simple way of life of a primitive people of Africa today parallels that of man in prehistoric times. Excellent camera work with an actual tribe shows a pattern of life that includes hunting for food, using fire, and adapting available materials to make clothing, shelter, utensils, and weapons.

**The Truck Farm**  
(1 reel) (Grades 1-6)

Work done on the truck farm, what it produces, and where its products go are among the many things children will see as they learn about Bill and Cathy's life on their parents' truck farm.

**How Trees Help Us**  
(1 reel) (Grades 1-6)

As Wally, in a walk through the woods, sees different kinds of trees, he begins to learn of the many ways they help us by supplying lumber, food and material for the things we make. Stress is laid upon the story of a mighty old oak which takes a long time to grow and is valuable throughout its life.

**The String Trio**  
(1 reel) (Grades 7-College)

The three instruments of the string trio—the violin, the viola, and the cello—are fully examined and heard. The instruments' functions, differences and methods of producing sound are explained. Skilled musicians demonstrate fingering, pizzicato, and playing with the bow. Produced by Gateway Film Productions Ltd.

Each of these 16mm sound motion pictures is available in true, natural color or black-and-white.

Write for preview . . .

If you are seriously considering purchase, fill in coupon for a preview of these Coronet films; or for a list of Coronet film libraries if you are interested in rental.

## Best Selling Movie Viewer

..... Top Quality at \$49.50

Inspect your pictures comfortably in a lighted room on the CRAIG Viewer's 3¼" by 4¼" hooded screen with its 75-watt projection lamp. Threads straight, left to right, on stainless steel film guide that doesn't touch pictures. Built-in frame marker clearly spots the right frame without notching or punching. Convenient focusing and framing adjustments. Lamp switches on automatically when film gate is closed. Dual cooling system lets you view a single frame indefinitely without damaging film or emulsion. Rugged metal construction. Far and away the most popular viewer for black and white or color, sound or silent. Models for either 8mm or 16mm film.

## Cement that sticks quick and stays stuck

Craig Formula #7 film cement is specially formulated to weld all color or black and white film in strong, smooth, permanent splices that do not show in projection. Equally strong with Triacetate as well as the older Diacetate film base. Does not deteriorate with age — always fresh and fast-acting. Handy brush applicator in 1-oz. bottle.

1-oz. bottle 40¢; 8 oz. \$2.45; 16 oz. \$3.50 . . . Craig Projecto-Editor, complete with rewinds, splicer, viewer and cement, \$79.50 . . . Craig Accessory Frame Counter for Projecto-Editor of Viewer (above), \$37.50. Available at all better camera stores.

the floor, I was amazed that your magazine could condone this practice. Such procedure can only lead to mass destruction of prints, and by the publication of this article I believe that a great disservice has been done to the entire field of audio-visual aids. I would appreciate your printing my letter—to at least show the average projectionist the fallacies of such a practice.

John Viazanko

Boalsburg, Pennsylvania

### Copyright Violations

*Editor:* Let me express my sincere appreciation for what you say in your editorial in the January issue of EDUCATIONAL SCREEN. You express very simply and very cogently the problem that exists with respect to use of film in closed circuit television situations.

Godfrey Elliott

President  
Young America Films

*Editor:* It's been several years since I have had the privilege of visiting with you. I've missed seeing my AV friends and acquaintances. I wouldn't be writing you now if you hadn't written the editorial "Copyright Violations and TV" in the January issue of EDUCATIONAL SCREEN.

The question of using copyrighted materials in school is a very large one and I expect as time goes on additional clarification of certain cloudy areas will come about. However, I feel the editorial presents a too restricted position. Indeed this position is, I believe, largely in error. I do not pretend to expertise in the area of copyright law. But as you have done, it is an area about which I have thought a great deal. In addition I have consulted with Dr. Siebert, here on the University staff who has made a study of copyright law. (Siebert has a law degree). I want to give you what I believe is a more correct interpretation than what was presented in the editorial. I base my different opinion on two facts and an opinion. First is the right of a school (or other renter or purchaser of copyrighted materials) to use, i.e., to exhibit the material. Second is the nature of closed circuit television. The opinion concerns a definition of the word "reproduce."

When a school purchases or rents a copyrighted film or book it buys the right to use, or exhibit the film or book. The film can be exhibited (projected) before a few students, or hundreds. The film showing can be made at one time in an auditorium location or over many days in small classrooms. The film copyright holder (exception

CITY \_\_\_\_\_ STATE \_\_\_\_\_

## Reader's Right (continued)

TFC films) does not tell the school how many times the film may be exhibited or say how many or what individuals may view the film at one time. The number of exhibits and size of audiences are a right the film purchaser or renter has. That exhibit right is what the school purchased.

As you know the same facts apply to a copyrighted book. It may be read by one person at a time, or the book may be read by a teacher over the school building PA system for hundreds of students to hear at the same time. These students may be in one large room or in many rooms. Similarly parts of the book may be projected by an opaque projector. All this falls within the right of the school to use and/or exhibit the book. In all the exhibitions mentioned it was assumed that the purpose was to inform or teach from the copyrighted materials.

When a school with closed circuit television wishes to use (i.e. exhibit) a film or book over this television system it is exercising a right it purchased. True, the transmission system is new. But basically the school is continuing to exercise its right to use the copyrighted materials to instruct. The CCTV is a more efficient system of ex-

hibiting the film or pictures in the book. A more efficient system of exhibition does not invade the right of the book publisher or film producer. If increased efficiency in exhibition invaded the right of the copyright holder then schools should be stopped from employing arc projectors for films as this equipment is more efficient resulting in larger brighter images which can be viewed by larger numbers of people. Both of us recognize and urge the use (in certain circumstances) of opaque projectors because they are a more efficient means of exhibiting pictures or passages in a book. If this more efficient method had been an invasion of the copyright holder schools long ago would have been stopped from showing copyrighted materials with an opaque projector.

Next, let's briefly consider the nature of closed circuit TV. CCTV signals are not telecast so that anyone who wishes may tune in. It is like signals carried by a school's PA system and not like radio signals broadcast to which a receiver can be tuned. CCTV is carried on a school owned cable and as such is a private system of information distribution. If copyrighted material is carried over such a school system the school is simply exercising its right of exhibition. The method of exhibition

is not of concern to the copyright holder so long as the school is engaged in its duty of instruction and the method of exhibition is available only to students of the school.

There is some difference of opinion regarding the word "reproduction" as used in the editorial and what I shall describe. The creation of an optical or electronic image is not the reproduction of copies of a copyrighted book or film. Reproduction which results in additional copies of a copyrighted piece we know is forbidden by law. But a school in exercising its right to exhibit a copyrighted film or book is not forbidden to exhibit images of the film or book which has been purchased outright or rented. Again this exhibition of images is assumed to occur before classes. If a school could not exhibit optical images of a film or book then the film could not be projected and the book could not be placed in an opaque projector.

Well, for not having written you in years, I've made up for the lost time in one letter. However, I do feel a contrary position to the one presented in the January editorial should be published in EDUCATIONAL SCREEN. We both realize I haven't said anything (save by implication) regarding the use of kinescopes. But anyway I've had fun writing you.

Lewis V. Peterson

Producer-Supervisor  
Television-Motion Pictures  
University of Illinois Broadcasting  
Urbana Ill.

"I realize your salary is not very high, Miss Gerard, however . . ."

## Lost: 22 Subscribers

*Editor:* Two weeks ago I asked our business office to place an order for 22 subscriptions to EDUCATIONAL SCREEN, one for each of our buildings. Yesterday after reading Ed Schofield's article ("Read . . . See . . . Hear," January, 1957 EdSCREEN, page 18), I decided that it would be more appropriate to wait until we can turn 35 youngsters out of one classroom in each building so that we can have a building library, so that we can have a building librarian, so that we can get the materials out of the classrooms where the teachers want them and into an instructional materials center where a jack-of-all-trades can administer them.

This order will be held until a similar article is published written by a person who believes in self-contained classrooms with a building AV coordinator.

Vernon McKown

Director, Audio-Visual Instruction  
School City of New Albany  
New Albany, Indiana

**EDITOR'S NOTE:** We invite someone to submit such an article—to EDUCATIONAL SCREEN & AVGUIDE, 2000 Lincoln Park West, Chicago 14, Ill.

# SAVE \$40

## ON THIS GREAT COMBINATION OF AWARD-WINNING B.I.S. FILMS

Here is your opportunity to secure these two titles which normally sell for \$140 for the low price of \$100.

### “THURSDAY’S CHILDREN”

“No film we’ve seen more effectively portrays the wonder and beauty of a child, the loving patience and devotion of a teacher, the indescribable delight of both when learning takes place.”—EDUCATIONAL SCREEN MAGAZINE

This Academy Award winner for the best Documentary short subject has received high praise wherever it has been shown both here and abroad. We take special pleasure in the quotation above because we, too, think “Thursday’s Children” is the most moving film about teacher and child that has ever been produced and think every teacher, every administrator, everybody interested in teaching as a vocation ought to see it.

A large group of educators and film librarians at the EFLA Convention described the film as “excellent not only for specialized education but particularly useful in teacher training for its remarkable study in teacher-pupil relationship.”

“A fine sensitive documentary” — Thompson, N.Y. TIMES • “It is beautiful, an inspiration and no honors can do justice to its moving glow” — Winsten, N. Y. POST • “Emotionally moving and intellectually stimulating” — Hart, FILMS IN REVIEW • “Excellent” — THE EXHIBITOR • “Remarkable for its astonishing intimacy, for its force of feeling” — SIGHT & SOUND • “A joyous, compassionate film” — Kass, CATHOLIC WORLD.

# Have you heard?

## IAVA in April

The Illinois Audio-Visual Association will hold its annual spring meeting April 11 and 12, 1957, at Western Illinois State College, Macomb, Illinois. Sessions will open Thursday noon with a discussion of the educational values of closed circuit television by Dr. J. Lloyd Trump of the University of Illinois. A tour of Western's FM radio facilities will include an explanation of the objectives, operation and programming of Station WWKS. This

tour will also include the Visual Education Department — the Photographic Division, the Audio-Visual Center, audio-visual classrooms and laboratory, and facilities for closed circuit television. Maurice Mitchell, President of Encyclopaedia Britannica Films, Inc., will be the dinner speaker. His topic will be "The Technological Era—What Will It Do to the Classrooms of Tomorrow." Friday's session will open with a presentation of "What's New" in films and equipment, followed by a

discussion of "School Programming on KETC - St. Louis." A business meeting will close the session at noon Friday.

## "Pageant" Filmstrips Completed

The Yale University Press Film Service has announced the release of the final six units in its series of 30 authentic filmstrip documents, "The Pageant of America Filmstrips." This culminates five years of scholarly and intensive work on the part of distinguished historians and educators as well as specialists in the field of visual education and expert technicians.

## People & Jobs

DAVID SCHNEIDER, for many years a contributing editor of EDUCATIONAL SCREEN, died recently. As audio-visual coordinator at Evander Childs High School in the Bronx and as a local film production specialist, he made many contributions to the audio-visual field.

WILBUR S. EDWARDS has been elected vice-president of distribution for Encyclopaedia Britannica Films.

JOHN MAURER, well known in the motion and sound recording industries, has established the JM DEVELOPMENTS, INC., after terminating his connections as president of J. A. Maurer Inc. and of Precision Film Laboratories.

PHILIP T. HALL, owner and operator of the Phil Hall Buick Company of Hollywood and a longtime civic leader, has been appointed to the board of directors of Cathedral Films, Inc.,

NORMAN COUSINS, editor of *The Saturday Review*, has been appointed to the board of directors of the Educational Television and Radio Center.

THOMAS A. ERHARD has joined the headquarters staff of the NEA Press and Radio Division as assistant director. He was formerly public relations director of the Albuquerque (N. M.) schools.

ALBERT BRANGWYNNE, JR. has been named by the Victor Animatograph Corporation as regional sales manager for the states of West Virginia, Virginia, Delaware, Maryland, western Pennsylvania, and western New York.

## A Print Fouled Up with Dirt and Oil...

## Can It Carry Your Message Properly?

Prints, like anything worth showing, need cleaning from time to time.

Not only to keep them from looking dull and shabby—but also to prevent imbedding of dirt and oil which may cause serious and permanent damage.

But there must be assurance that cleaning is done with the right solvents by skilled personnel with efficient equipment. Peerless has all of these to offer.

# NEW COLOR FILMSTRIP

## SETS IN 3 SUBJECT AREAS

written by recognized authorities

### SOCIAL STUDIES

First of a new series presenting . . .

#### "The Development of the American Republic"

Junior-Senior High Color

The beginnings of our country, from discovery through the establishment of a new nation. Written by J. G. Kerwin, Ph.D., Prof. of Political Science, The University of Chicago.

#### "Establishing the Republic"

- A367-1 A New World and a New Hope (51 frames)
  - A367-2 The English Settlements (53 frames)
  - A367-3 Establishing Social Life in a Wilderness (49 frames)
  - A367-4 Revolution and Independence (45 frames)
  - A367-5 A New Experiment and a New Nation (48 frames)
  - A367-6 The Development of the Thirteen Colonies (44 frames)
- Each filmstrip, in color, captioned . . . \$ 6.00  
A367SB complete set, 6 filmstrips, boxed . . . \$33.00

### LANGUAGE ARTS

A simplified approach to effective speech . . .

#### "Using Good English— in the Middle Grades"

Intermediate Color

Basic English concepts graphically illustrated to capture interest and stimulate learning. Written by Harold G. Shane, Ph.D., Professor of Elementary Education, Northwestern University.

- A130-1 Building Good Sentences (50 frames)
  - A130-2 Using Plurals Correctly (39 frames)
  - A130-3 Possessives, Contractions and Abbreviations (40 frames)
  - A130-4 Using Capital Letters and Punctuation (43 frames)
  - A130-5 Letter Writing for a Reason (47 frames)
  - A130-6 Making Oral and Written Reports (47 frames)
- Each filmstrip, in color, captioned . . . \$ 5.00  
A130S complete set, 6 filmstrips, boxed . . . \$28.50

### HEALTH AND SAFETY

To help beginners form good habits . . .

#### "Be Healthy, Go Safely—the Primary Way"

Primary Color

Each strip has been checked by specialists for accuracy and authenticity. Authors are Hester Beth Bland, Hs.D., and Malcolm J. McLelland, M.S., Health Education Consultants, Indiana State Board of Health.

- A567-1 Let's Have A Party (43 frames)
  - A567-2 Let's Visit Our Friends (30 frames)
  - A567-3 Let's Get Ready for School (30 frames)
  - A567-4 Let's Stand Tall (35 frames)
  - A567-5 Let's Visit the Dentist (approx. 35 frames)
  - A567-6 Safe and Sound At School (38 frames)
  - A567-7 Safe and Sound Along the Way (37 frames)
  - A567-8 Safe and Sound At Home (35 frames)
- Each filmstrip, in color, captioned . . . \$ 5.50  
A567S complete set, 8 filmstrips, boxed . . . \$39.50

# It's an Idea

In fact, it's such a simple idea we hesitated at first even bringing it to your attention. It may already have occurred to you, and you may already be doing something about it. On the other hand, we've talked about the idea to dozens of people, and all of them responded enthusiastically and thought it was something well worth thinking about.

Simply stated, the idea is this: *filmstrips are an extremely valuable and practical medium for individual learning.* Now, this does not preclude the use of filmstrips with groups. Filmstrips are and always will be primarily useful when projected for group instruction; however, additionally they can and should be made readily available at all times for individual pupil use. This is more important than the simple statement of the idea—actually making filmstrips available for individual use.

The instrument that makes individual filmstrip viewing a practical classroom technique is the misnamed "filmstrip previewer." There are three on the market we know of: the Standard, the Aljac, and the more recently announced previewer made by SVE. It's true that these simple devices may be used by teachers for previewing filmstrips before projecting them in the classroom, but this is only one use, and maybe a minor one. These instruments are not only previewers, they're *viewers*. They make it possible for individual pupils to learn from filmstrips right in the classroom without distracting others.

We know this is a practical idea. We've tried it and it works. Filmstrip viewers have been placed in the reading corners of elementary classrooms. An ample

---

**One way to encourage variety and difference in child development is to increase sharply the use of self-instruction materials. We could provide a cafeteria of self-teaching materials in all fields by the intelligent use of filmstrips, tape recordings, textbooks written on at least two levels of complexity, self-testing materials. Much of the job lies ahead and will require ample financial support.**

— EDGAR DALE, "The Individual and the Group,"  
The News Letter, Jan. 1957

---

variety of carefully selected filmstrips, closely related to curriculum and pupil interests, has been placed with the viewers. Filmstrips have thus been made as readily available for pupil use as books. Pupils are as free to use filmstrips as books. Filmstrips are for reading, too! Some pupils are readier to read the bright and vivid frames of a filmstrip than the pages of a book; and the viewer can be operated by a six-year-old.

"But won't the children damage the filmstrips?" The answer to this question also comes from comparing filmstrips with books. Children damage books; the pages get soiled and torn from use — and sometimes misuse; but we don't deny children the use of books because this happens. We expect it and provide for book replacement. We try to help children grow in their respect for and their care of property.

It is a simple idea — letting pupils individually learn from filmstrips; but its acceptance carries with it tremendous implications for the instructional program and the audio-visual industry. Bringing about its acceptance requires a changed point of view for a lot of people.

Teachers are probably the ones most ready to recognize and use filmstrips for individual pupil learning. They are skilled in directing and guiding individual pupil interests. They know the need for a variety of materials. They readily see the appeal and value of filmstrip and viewer for pupil reference use.

Principals, superintendents, and others with budget-making responsibilities may have greater difficulty in accepting the idea. But it's a logical idea, and it makes sense. They may want to try it out on a small scale first. With an open mind, conviction follows.

We audio-visual directors have the biggest hurdles to overcome in our thinking. We are so accustomed to limited budgets, to a single projector for a school, to limited materials that must be shared by many schools, that it is extremely difficult to scale our thinking to new dimensions. Filmstrips in every classroom may seem impossible, but, really now, doesn't it make sense?

*Paul C. Reed*

## FOR A HAPPY PRESENTATION

The joy of accomplishment is a universal happiness. Especially in the case of a film which is your creation, born out of hard work and careful planning.

Because Precision's staff of specialists adds its own creative efforts to yours by the use of *specially* designed equipment, and by careful handling and intelligent timing—you might say we are fellow creators, working with you to bring out all you've put into the original...Yes, and maybe more!

So, when you turn those 16mm dreams into realities, be sure to call upon Precision for the *accurate, sound and exact* processing your films deserve.

Remember: Precision is the pace-setter in processing of all film. No notching of originals—scene to scene color correction, optical track printing, all are the very best... 35mm service, too!

you'll see

and hear

Camille Baxter, AV chairman, and instructor Reg Sundin discuss the possible uses of a travel poster.

# AV "On the Double"

by CAMILLE L. BAXTER

**I**N THE COURSE of attending many a meeting that has been geared to stimulating teachers to "do something (whatever happens to be in vogue), I was bound to come to the one that discussed "How to Stimulate the Use of Audio-Visual Materials in Your School."

---

*Camille L. Baxter is Audio-Visual Chairman at the Los Angeles Harbor Junior College.*

I was fascinated.

To show you how much a babe-in-the-woods I was, I hadn't known it was a necessary, possible, or even desirable way to spend time. The use of AV on our campus is so integrated to curriculum, needs and methods that it is a tacitly accepted tool. The instructor on our campus who says: "Look here, young man . . ." is taking apart a working model or pointing to a wall chart, not indulging in an 1850 style of pedagogy.

Statistical records kept this past school year indicate a film use frequency of almost one per student enrolled. Use of recordings exceeds one per student enrolled. Filmstrip usage runs a close race with film usage and all types of projectors have to be scheduled to meet classroom demands. "Stimulate" use, indeed! I've become a fair-to-middling traffic cop. In the evening classes especially, we find it necessary to move equipment from room to room

**Photographer doesn't bother student Margorito Garcia in the least as she works with speed dictation records.**

on rigid schedules in order to keep up with the needs.

As previously reported in this publication, Los Angeles Harbor Junior College is not large compared with many schools, the student enrollment being about 3,000 each semester. However, we are organized chiefly around a technical curriculum, making the use of audio-visual materials mandatory.

A student who is training for employment with the petroleum industry (we are geographically in almost the dead center of the major refineries) finds at his disposal not only those of the 3,139

*(Continued on page 152)*

**Instructor Richard Noble and student Gwen Moc Quot check the threading of a projector.**

Walter Crewson, Associate Commissioner, New York State Education Department. At his right is Mox U. Bildersee, of the New York State Education Department.

*The following article is based on the banquet speech made at the winter meeting of the New York State Audio-Visual Council by Walter Crewson, now Associate Commissioner, New York State Education Department, and formerly school superintendent at Levittown.*

**I**NSTEAD of starting this educational talk with a discussion of the child, if you don't mind, I'd like to begin with the school and the superintendent who is responsible for building it.

I'm going to assume that the superintendent I'm talking about knows his job and that he has sense enough to know that surrounding him are a great many creative and artistic people who are as dedicated as he is to the task of giving children good sound education. So when he gets to the point of planning a school, he draws upon the creative capacities of his staff, and they work with him to design that school.

Let me see if I can put this into the form of a simple principle. If I were talking to the superintendents tonight, I would say, "Fellows, when you go to make a major decision, put down on a white sheet of paper, where you can look at it, the names of everybody on your staff who has any conceivable concern with that decision. Then see to it that each one gets a chance to have his say about it."

Having served twelve years in the superintendency, I think I can speak now with some assurance of knowing the problems. This good superintendent I'm speaking about will certainly call in his audio-visual man, and he'll ask, "If I'm going to design a building that'll make sense audio-visualwise, what have I got to do?"

Now right there is where audio-visual people get recognized as professionals, or get relegated back to clerkships. If the superintendent has the good sense to call you in and ask, "What have I got to do to get a right audio-visual environment into a building?" and if you've got the pearls of wisdom to hand to him, you're a professional.

I had this experience one time. When I was superintendent out in southwest Ohio, we were designing a number of elementary school buildings. Indeed, we built eleven buildings in six years in that district. We didn't build any obsolete new schools by just copying the old ones. We started from scratch and built new ones. One of the principals was especially creative and on the ball enough to say, "I'd like to see that the school to be built over here in the southwest corner of town will be a model school to show what you can do with audio-visual aids."

So we worked with the architect night after night. That principal was there and also key members of his staff. When we came out, we had what

*we thought was a good school from an audio-visual standpoint. It had a good audio-visual environment.*

Now what do we mean by that? Well, very simply—the rooms were large enough. They were spacious. They all had a fine balance between chalkboards and bulletin boards. As a matter of fact, in some of the rooms about half of one wall was bulletin board. The chalkboards were green because the authorities have told us that's a little easier on the eyes.

We used the Harmon technique for lighting all the classrooms. Now that simply means that we had good reflectance, but not glare, from all the surfaces, and we didn't have any relationship in brightness contrast of greater than 3 to 1. That is, we didn't have a real bright area alongside a real dark area because those authorities who have worked with the human eye have learned that if the human eye has to make such sharp adjustments as from a white area to a black area, or similar contrasts in short distances, it contributes to fatigue.

Then we darkened every classroom. We did it very simply. We built a traverse rod into the ceiling. Then we provided a fibre glass curtain that closed off the whole light wall of the room. With minimum effort in just a few seconds you could darken the classroom—every classroom.

We did this because we believed that

**The Commissioner  
speaks out . . .**

# AV DIRECTORS

# CLERKS OR PROS?

by WALTER CREWSON

audio-visual aids ought to function as closely as possible to the point where the teacher and the pupil usually meet. Now we had an awful hassle with some of our taxpayers about this. When they came to look at the building after it was completed, some said, "My gosh, our poor, aching pocketbooks. You've darkened every classroom. Why in the dickens didn't you build a single audio-visual room." This they asked in a big public meeting. I was sitting up on the platform—the superintendent's always on the chopping block, you know. Some taxpayer said, "That was a waste of money. You should have built one room for that stuff. Then you wouldn't have had to put all this faldralin in the other classrooms." Well, fortunately we had the cost sheets there. The architect was also on the platform, and I turned to him and asked, "What would it cost to build an audio-visual room say as big as two classrooms?" "Oooh," he said, "about eighty thousand dollars." And I said, "What did our curtains cost?"

"Well," he said, "they cost \$400 a classroom." Well \$400 times 19 classrooms meant that we had spent \$7600 to put the curtains up, so we answered the taxpayers without much trouble.

But any-way, every one of those classrooms was equipped so that when a teacher got to the point where an audio-visual aid functioned, she could darken the classroom. On every level

of that building there was a projector, and that principal was enough on the ball that he was able to get all the teachers to accept the notion that each one ought to learn how to run a projector. They didn't have to have the custodian come and do it for them. These teachers felt that this extra skill put another facet on their professionalism.

This building also had its own basic film library. It had a library of recordings too. There was a little music corner in the library with files of record albums and turntables with earphones so that children could go and listen to music while others were reading in the library without anybody's being disturbed. This building that I've been talking about is the Jefferson School in Hamilton, Ohio, and I am still just as proud of it as I can be. It's a beautiful school and it illustrates, I think, the very finest in design for the best application of audio-visual devices.

Audio-visual directors should actively help to build buildings like this one. But if the audio-visual director is nothing more than a co-ordinator of maintenance, then he's a clerk and he ought to be paid like a clerk and ought to quit this talk about being a professional. If he's just a distributor of films and a deliverer of projectors, well you could get a \$35-a-week clerk to do that just as well; you don't need a professional.

I hope I haven't stepped on anybody's toes, but if the shoe fits, put it on.

I think it's important that the audio-visual director be a leader in instruction. Audio-visual belongs to the curriculum; it is *not* a special isolated service. It's a part of the curriculum. So I think an audio-visual director ought to have some notion about what curriculum is about. I think your most important function is to plan with the principals and the teachers so they know *where* in the curriculum to use audio-visual materials; where are the points where they can function best; how do they fit into the total program.

Have you seen the Oklahoma State Education Department brochure on audio-visual aids? This fall I wrote to all the forty-eight states asking them for their administrative organization and their plan of operation in the audio-visual field. I should tell you that about half the states don't do anything about audio-visual. That is, the State Education Departments say, "Well, some university over here handles that; we don't do it." What did this tell me? It told me that the Commissioners of Education in those states don't think that audio-visual belongs. They think of it as a special service.

Well, anyway, there was one state that seemed to me to have just a little edge on the others, and that was Oklahoma. Oklahoma, I thought, really went over the keyboard and pointed out crystal clear what AV aids are and how they should be used.

There's a whole section in that book on the fieldtrip. I guess there's nothing so revolutionary about thinking of a fieldtrip as an AV aid. But just as taking the children clear across the building to see a film breaks the whole continuity of what you're doing in a classroom, so a fieldtrip that doesn't have real correlation with the curriculum is not much good. And I think it's the function of the AV director, if he's on the ball, to work with whoever is planning the curriculum in the school system so that the teachers have some sense of direction and know how to fit their fieldtrips and all audio-visual resources into the meaningful context that they deserve in the curriculum.

These are big assignments. But they're the hurdles you're going to have to go over if you are to be recognized as a real professional. *Professions are always based on creative service, seeing service, helping service;* and we're going to have to jump these hurdles if we're going to be recognized as something other than clerks and maintenance men and distributors of films and carriers of projectors.

What are you? Clerk or professional?

*Francis Noel has just returned to the United States after a year abroad serving in the Audio-Visual Section of the European Productivity Agency. His State-side job is Chief of the Bureau of Audio-Visual Education, California State Department of Education. Here is his last letter from Paris.*

# Letter From Paris

by FRANCIS W. NOEL

6 rue Massenet. Paris 16, France

Mr. Paul C. Reed  
Editor, EdSCREEN & AVGUIDE  
Chicago, Illinois, U.S.A.

Dear Paul:

Our stay here in Europe is almost over. In less than another month we will have returned to America. Soon this adventure, part of it a sort of international AV education Odyssey, will live with us only in our memories. And some things are memories even now. These are already helping us to appreciate both Europe and America more. Our experience has sharpened our realization and appreciation of the vast heritage that is America's because of Europe.

We wondered before coming, as do thousands of others, what our firsthand impressions of Europe would be. Now, somewhat amusingly, after one short year, we are wondering what our returning impressions of America will be?

Collecting my thoughts for this letter is turning out to be a difficult job. The total European situation bears heavily on my consciousness, with many powerful and distracting factors which do not make it easy for me to confine my writing to audio-visual education. With each new start of this letter (and there have been several to date), I get involved with such topics as the Hungarian revolt, the action at Suez, the wide cracks appearing in the Communist ideological structure, the effects of gasoline rationing, the cold buildings and the general economic disruption resulting from insufficient supplies of oil, and more personally my efforts to wind up work with the European Productivity Agency (EPA), the amusing incidents attendant to our preparations for leaving incomparable Paris, and finally the "au revoirs" as the day of departure approaches.

But I cannot pass by these concerns without observing that perhaps the Hungarian revolt and the unrest apparent in the other satellite countries, as well as within Communist Russia

itself, may have some special significance for us in audio-visual education. We note the fact that it is the youth and the intellectuals who are threatening the status quo and who dare to protest and take action against the intolerable results of Communist ideology. Today we are no doubt reaching many of them through the "Voice of America" radio broadcasts. When we are able to reach them more directly and openly (the time may be closer than we realize), there will remain the language barrier. But perhaps the universal language of visual communication—film and television and other audio-visual devices—may well prove to be an intellectual atomic bomb, another instrument for exposing the Communist lie.

Now I must forego the impulse to write more of these things and take pleasure in writing further about au-

dio-visual education hereabouts. In my first letter<sup>1</sup> I wrote of problems which are peculiar to European AV education and then contrasted them with ours. Now I'd like to mention briefly some things—American—which seem to be affecting its development here on the continent and in the British Isles, I do so with humbleness and with the perspective that comes from my one year's work in Europe, but also with pride in the AV leadership which America has given and is giving.

American influence in AV stems from three areas of activity—the written or published word, film productions, and people. None of these influences would have been felt if the United States government, working through

# Tape Method for Transparencies

by MARY E. SPEAR

Figure 1

**D**URING each term when I am teaching "Graphic Presentation of Statistics" at The American University, hundreds of charts must be shown for discussion. They are gathered from company reports, newspapers, books, magazines, government and private publications and miscellaneous sources.

The problem of showing this material to the class as a whole depends upon the objective of the lecture. At times it is advisable to pass around

Figure 2

originals or photostat copies so that the students may study them individually. On other occasions slides showing types of charts will answer the purpose. But when a specific problem is to be worked out for class discussion, transparencies used on the overhead projector prove most graphic. The immediacy and action of the charts can be shown as each problem develops.

To make these transparencies as accurate and attractive as possible without involving a lot of time and drafting materials, I found the use of pre-printed patterned tapes to best meet the need. Charts are made quickly and neatly in class. When a deletion is necessary, it is cleanly "erased" by merely peeling off the tape. Their pressure-sensitive adhesive backing leaves a clean surface for the next application.

The tapes used are a product of Chart-Pak, Inc. (Leeds, Massachusetts). They come opaque or transparent, both of which are suitable for transparencies. There is a good selection of line, cross-hatched and dot patterns. Their varying widths, 1/32" to 2", make them suitable for either trend or bar charts. They not only give a professional flare to the charts but do away with the use of drafting tools, inks and

Figure 3

the unevenness of the marking pencil on acetate or plastic surfaces.

The chart (Figure 1) shown on the screen was first laid out on a Chart-Pak Transgrid with a 5B pencil. The Transgrid is a transparent (translucent) plastic planning board printed with black grid lines at 1/4" intervals. The matte finish of the board permits soft pencil markings which can be easily removed with plastic cleanser.

Because several trend lines were to

be compared one at a time with this basic column chart, the Transgrid with the penciled chart was turned over, making the layout reversed (Figure 2). Then a piece of clear acetate, cut to fit the projection machine, was fastened over the reversed chart and "drawn" with the adhesive tapes. This made the column and grid lines on the underside of the acetate when it was turned to the positive position for projection. It also left the upper surface of the acetate free for further plotting or marking.

To cut the tape (Figure 3), hold the tape knife in one hand, at an angle of approximately 30 degrees against the adhered tape at the cut-off point. Pull the roll end of the tape against the blade with a sharp diagonal movement. Never attempt to cut by drawing the blade over the tape.

Figure 4

The charts were lettered with a red marking pencil, which can be quickly removed with a Q-Tip or piece of cotton wrapped around a small stick. For a pointer the plastic Chart-Pak chisel used for lifting the tapes is excellent.

In addition to the tapes there is a good selection of transparent symbols which may be used in many ways. These Picto-Pak symbols come on 8 1/2" x 11" pressure-sensitive sheets. Each sheet contains symbols in three sizes, so you can select just the size you need.

The smallest size symbol was used on the 3/4" x 4" glass slide (Figure 4). When making the slide, cut a piece of lightweight acetate the size of the glass. The piece of acetate used for this slide was cut from the wrapper of a

# FOUR NEW FILMS FOR ELEMENTARY SCHOOL SCIENCE

*Middle Grades and Junior High School*

**HOW ANIMALS HELP US** — Provides a visual discussion of the many ways in which animals and their products are useful to man.  
(1 reel, \$50)

**THE WEATHER STATION** — An introduction to weather forecasting — the instruments used — and the value of weather forecasts.  
(1 reel, \$50)

**HOW PLANTS HELP US** — Illustrates and explains the many ways in which plants provide us with useful services and products.  
(1 reel, \$50)

**HOW PLANTS REPRODUCE** — Visualizes and explains the function and parts of the flower, and demonstrates the flower-to-seed cycle.  
(1 reel, \$50)

**FOUR BRAND-NEW FILMS IN THE YAF ELEMENTARY SCIENCE SERIES** — more than 40 teaching films especially planned and produced to meet the needs of the elementary school's science curriculum — now in use in thousands of the nation's elementary schools. box of candy. The title and numerals were typed on a sheet of paper to estimate spacing for the final layout.

The acetate was then placed between Peerless typewriter carbon which is especially prepared for making slides. These red carbons are cut, and folded ready for use. They have the slide frame imprinted on them so that titles or layouts may be easily spaced and planned. After typing the titles and numerals the acetate was fastened lightly to the Transgrid which served as a guide for adhering the tapes.

The required symbols were then cut from the sheet and the protective backing removed. They were then lined up on the chart and 1/16" opaque tape formed the base lines. The symbols were touched up with water color pencils which gave them more interest and better visibility of outline when projected.

Patterned tapes used on slides are also effective. They come in black and colors. When trend lines cross each other in plotting, it is best to adhere the most irregular curve first. The second trend should be cut wherever the two colors meet as they appear dark or opaque on the screen when they cross over each other.

At times when the need is more for the showing of nontransparent materials on the opaque projector, overlays can be made for the few exhibits requiring a direct comparison or action.

The illustration in Figure 5 shows a base map on which a hurricane overlay is pictured. This overlay can be replaced by other pre-made overlays which can be slipped on or off as the story progresses.

Figure 5

The advantages of the tape method are their ease in handling, the neatness and visibility of the graphs on projection, the simplicity of making changes or corrections, the reuse of the acetate as the tapes leave a clean surface, and the few tools and materials needed as they require no professional drafting ability. The effective results show their versatility and make them an invaluable asset to the classroom.

# Puppets Put Punch Into Point 4

by FRANK SHIDELER

*The following report came from the International Cooperation Administration, Washington, D.C.*

**B**OLIVIAN Indian farmers and their families are so attracted to puppet shows that this audio-visual medium is being given priority—even over movies—by the Agricultural Extension Information Section of the Point 4 program in Bolivia.

Initial successful use of puppets has brought to light possibilities of this means of mass communication which were not entirely anticipated when the program started. At the start, who knew that Province (County) Agents would prefer puppets to films?

The Province Agents say puppets are better adapted to their work. They create a better local approach. The agents can make their own puppets from locally available materials and produce an instructive show once a week or oftener. This contrasts with the problem of waiting for months for a movie to come to their outlying province. In addition, puppet shows can be produced in any community regardless of whether or not electric power is available.

Use of puppets—reaching a cross language and cultural barriers to teach the people—is now a proven effective technique in Bolivia. Puppet shows interest 4-H (it is “4-S” in Bolivia) club-age youngsters.

This medium can be used now because a Bolivian, Jaime Cusicanqui, was recently trained in puppetry techniques at the three-month Regional Audiovisual Workshop in Panama under the auspices of the International Cooperation Administration. Soon after his return to Bolivia, Cusicanqui began to make puppets and plan puppet shows for the Indian farmers. He fashioned several puppets, a portable stage for presenting the shows, prepared several scripts and wrote an instruction book for the Province Agents.

Simplicity is the keynote—in materials used, in script language and in presentation.

First puppet performances were given early last fall on the 13,000 foot altiplano before various groups of In-

Miss Olinda Croci, of ICA Washington, D.C., shows off two of the puppets made in Bolivia which are being used so successfully as educational tools in rural areas.

dian farmers and in rural schools. Presentations had to be given day and night to fill the demands.

In one of the first puppet shows produced, use of an insecticide was demonstrated. It showed how the Province Agent could be of help to farmers and others working in farm communities. Included also were humorous skits for both young and old. Cusicanqui, prior to giving a show, talks with the Province Agent to find out something about the most progressive farmer in the area. During the show one puppet mentions this farmer by name. Usually the farmer is in attendance and the puppet strikes up a conversation. Through this farmer-puppet exchange, the farmer is led into explaining in his own words some of the things he is doing or how he does them. He talks directly to the puppet—that's natural—just get yourself in the same situation with a puppet or a ventriloquist's dummy and see how you react! Cusicanqui's puppets have names and of course before the show is over the whole audience can identify the main character by name. But most important of all, the message of Agriculture Extension Agent is gotten across.

As children have always known, and adults are just learning, puppets have punch!

## NEW COURSE OF STUDY IN PHOTOPLAY APPRECIATION

Shall we teach boys and girls how to shop for movies?

The answer to this question is a new book entitled "Standards of Photoplay Appreciation." The authors are William Lewin, former head of the English Department at Weequahic High School, in Newark, N. J., and Alexander Frazier, Assistant Superintendent of Schools, in Houston, Texas. The book is an outgrowth of committee activities of the National Council of Teachers of English. It is priced at \$4.75 for single copies and \$3.75 a copy for 20 or more.

Supplementing the book is a periodical called "Photoplay Studies" at \$3 a year, which selects a recommended film each month for classroom discussion, and also a series of photoplay filmstrips in color at \$7.50 each, providing a basis for classroom discussion. Filmstrips available thus far are based on the following photoplays: Alexander the Great, Greatest Show on Earth, Knights of the Round Table, Adventures of Robinson Crusoe, Romeo and Juliet, Ulysses, Hansel and Gretel, The Glass Slipper, Richard III.

The publisher of these materials is Educational & Recreational Guides, Inc., 10 Brainerd Road, Summit, N. J. This organization is headed by Dr. Lewin, one of the authors of the new text. He is a past president of the N. E. A. Department of Secondary Teachers and is generally regarded as the founder and leader of the photoplay discrimination movement in the schools.

## EGYPT - ISRAEL

(The McGraw-Hill Text-Film Department, McGraw-Hill Book Company, Inc., 330 West 42nd St., New York 36, N. Y.) 90 minutes, 16mm sound, b&w, 1956, \$275. Produced by Edward R. Murrow and Fred W. Friendly through Jefferson Productions for SEE IT NOW: CBS Television.

### DESCRIPTION

Edward R. Murrow, assisted by Howard K. Smith, probes the issues involved in the troubled relations between Egypt and Israel. Interviews with Nasser, Ben-Gurion, and other leaders are set in backgrounds of geography, history, economics, religion, and cultural traditions.

The film is divided into three parts. Part I (31 minutes), subtitled *Egypt-Israel*, is devoted almost entirely to Egypt. Prime Minister Nasser makes a six-point statement of the aims and

principles of his administration. Displaced Arabs in Gaza tell how they feel about Israel and the United States (the only sequence in the film which requires an interpreter). A publisher of a Cairo newspaper explains historically the anti-American sentiment. He believes that the Arabs will now accept the 1947 proposal for the partitioning of Palestine which they formerly rejected, but that the Arabs will not ac-

cept this proposal "two years from now." The head of the Arab League gives its history and purposes. There is a description of Egypt's military forces.

Part II (38 minutes), subtitled *Israel*, begins on a "kibbutz," or collective farm on the Israeli side of the Gaza strip and describes the adjustment of the young inhabitants to a regimented frontier life. Tel Aviv and Jerusalem are contrasted. The treatment of Arabs in Israel and of new Jewish immigrants at Jaffa is considered. Particular attention is given to the resource development of Israel. Creating one's own home out of practically nothing is what Zionism means to Prime Minister Ben-Gurion. An American Point Four advisor tells how the Israelis have taken to farming and cattle raising. Fishermen on the Sea of Galilee describe the basis for their strained relations with Syria. Foreign Minister Sharrett explains the deadlock between Israel and Trans Jordan over the plan to divert and utilize the water of the Jordan river for the benefit of both countries. He also answers the accusation that Israel is a threat to the Arab countries and he tells what Israel proposes to do about the Arab refugees. Chief of Staff General Dayan explains the role of the "kibbutz" in the Israeli defense program and Air Force Colonel Weismann describes the equipment and extent of Israel's air force. He views with alarm Egypt's acquisition of bombers, an offensive weapon. To a member of Parliament, the idea of a preventive war with Egypt has no meaning, because he believes that war already exists. He warns Nasser that he is vulnerable to the same fate as Farouk.

Part III (19 minutes) is subtitled

Cairo, but it is devoted almost entirely to discourses by Nasser and Ben-Gurion. Nasser defends his action of buying arms from Czechoslovakia, reiterates his fear of aggression by Israel, expresses his antipathy to domination by Great Britain and France, disclaims any problem of future domination by the U.S.S.R., and calls for the partitioning of the former Palestine (as he had proposed at the Bandung Conference) as a prerequisite to peace. Ben-Gurion is ready to talk peace with Nasser, but he feels that in the cause of peace it is imperative that Israel acquire arms from the United States of a quality equal to those that Egypt has received from Czechoslovakia. He is convinced that through education, health services, and attention to the other humanitarian needs of both Arabs and Jews, peace will be the final outcome.

visually as to their cause by the coincident puffing of the Prime Minister's fluffy white hair. In addition, Mr. Murrow alludes to the "windswept Negeb" where Mr. Ben-Gurion lives. After all, the location scenes in this film give a feeling of presence which is rarely obtained in other films about these countries. The informal and spontaneous interviews with Nasser and Ben-Gurion lend authenticity and immediacy. More than that, they approach the nature of historical documents.

—Ledford Carter

## ANGER AT WORK

(International Film Bureau, Inc., 57 East Jackson Boulevard, Chicago 4, Illinois) 21 minutes, 16mm sound, black and white, 1956. \$125 includes statewide educational television privileges. Produced by University of Oklahoma. Sponsored by Oklahoma State Department of Health.

### DESCRIPTION

*Anger at Work* explains the "headache switch," one of the mental mechanisms of man's personality which induces displacement of anger onto other men and impairs one's efficiency in everyday living. Several incidents are presented depicting some of the techniques people have developed for handling such overwhelming feelings as anger, resentment, and frustration.

Ed Wilson had just begun in his new job as draftsman when his boss smudged a drawing that he had been working on for several hours. As a result, he vehemently let his boss know how he felt about the matter. Frank McCoy, a fellow worker, explained to Ed that he was using the "headache switch" when he lost his temper with the boss and contended that he was just "letting off steam" caused by the pressure of a new job and the flat tire he had had on the way to work. Frank suggested that he try several methods for getting the same emotional release without outbursts of anger. The validity of this advice was strengthened when Ed went home and lost his temper with his wife and child. At the time he had forgotten what Frank had advised, but, upon reflection, concluded that his suggestions had merit.

The film points out that some people use different techniques to combat emotional tension. In the case of Mike O'Shea, the firm's top salesman, this tension was worked off on the golf course or tennis court. Volpae, the company janitor, accomplished this by working in his garden. Frank McCoy

### APPRAISAL

After exposing divergent viewpoints in a well-balanced format, Mr. Murrow states his own opinion that "time is running out," that America, too, has a stake in the question of war or peace in the Middle East, and that "what we do or do not do may do much to determine the outcome." If this be true, it is important that Americans know the background which this film presents.

In view of the fact that this film was prepared for a CBS television presentation on March 13, 1956, some may ask if the film is dated. Certainly it is dated, a circumstance that the skillful user of the film will make clear to his audience, but as background information the film is not obsolete. In giving meaning to more recent and more dramatic events in the same area. EGYPT-ISRAEL is even more timely now than it was a year ago.

How will the film be used? Public affairs forums and adult discussion groups might use the film as an introduction or as source material for a series of programs on the Middle East disputes. The film is easily correlated with college courses in political geography, international relations, and modern history. High school teachers can integrate it with history and social studies. The units of the film are discreet enough to be used separately. Yet they are flexible enough to be used by a skilled leader in any combination.

The technical quality of this dramatic film is generally excellent, the most obvious exception being the wind noises in the microphone of Mr. Murrow's outdoor interview with Mr. Ben-Gurion. Even so, the speech is intelligible enough and interviewers are cued

## This orphaned oil can means just one thing...

Here's a can that once held only the finest oil. It had an important job—keeping the school's 16mm sound projectors properly lubricated.

Trouble was, people sometimes used the oil can in the wrong places. This caused projector troubles.

Other times the poor oil can just sat on the shelf, and sat, and sat, and sat . . . till some bone-dry projector quit dead and needed new bearings.

Anyhow, it's like we said above . . . this orphaned oil can means just one thing:

**THE SCHOOL BOUGHT KODASCOPE PAGEANT 16mm SOUND PROJECTORS . . . which never need oil-**

*ing by the user!* They're lifetime lubricated at the factory.

### ONLY Pageant gives you all these:

1. **Lifetime lubrication**, to bypass the most common cause of projector difficulties.
2. **Brilliant pictures**, because the exclusive Super-40 Shutter gives you 40% more light for your sound movies.
3. **Fidelity-controlled sound** with tone and volume controls, baffled speaker and precise scanning of sound track.
4. **Single-switch operation**, both forward and reverse.
5. **Four models to choose from**, one to fit your needs exactly.

TRADEMARK

laughed about his problems and made a joke of them. Gus Peterson put all of his energy into his love for the job he was doing and the achievements he made.

Another example of emotional stress concerns Mrs. Nugent who had lost an advancement to another person. As a result of her disappointment, she let her appearance get untidy, her work become inadequate, and her attitude with co-workers became surly. Her displacement of anger was evidenced in the form of severe headaches which forced her to go home early so many times that eventually she was replaced. Still another example describes Tony Luciana who became so careless and

unable to concentrate on his work when his boy was arrested that he lost a hand when it was smashed in a drill press.

The concluding sequence shows Ed Wilson attempting to advise a new man about the "headache switch" when he noticed the man's anger over spilling a bottle of India ink on a new drawing.

#### APPRAISAL

Despite the fact that this film was originally made as part of a series on the emotional problems in industry, **ANGER AT WORK** presents principles and techniques which might be successfully applied to almost any type

of activity or situation. It is not too difficult to identify some of your own actions in the examples given in the film. Much useful information is offered for high school guidance and psychology classes; however adult groups, college classes, and vocational education workers will probably utilize it to a greater extent as the problem is treated from an adult viewpoint. The authenticity of the film is attested by the fact that the educational authors include a commissioner of health, a psychiatric consultant, and a consultant in industrial medicine.

— O. E. Bismeyer, Jr.

### HUMAN HEREDITY

(E. C. Brown Trust, 220 S. W. Alder Street, Portland 4, Oregon) 18 minutes, 16mm, sound, color, 1956. \$170. Produced by Churchill-Wexler Film Productions. Sponsored by E. C. Brown Trust. A film guide is available.

#### DESCRIPTION

This film uses live-action photography and animation with touches of humor to present basic facts and principles concerning human heredity and the influence of culture and environment on behavior and attitudes.

Opening scenes show teen-age identical twins at bedtime. One is paging through the family album and notices resemblances between some of her features and those of her relatives. The other is drawing a human egg cell.

The next day they arrive at school and observe similarities and differences in the physical features of their classmates. The narrator poses several questions including "How are our human qualities inherited?" "What do they mean to us?"

Answers to these questions are examined in the animation scenes that follow. We see that the hereditary link between parent and offspring is not by blood but by chromosomes carried in sperms and eggs. The relative sizes of sperms and eggs are then discussed by an explanation of fertilization.

Next shown is that each of the 24 chromosomes of the father is matched by one from the mother. The sex of the offspring produced from the fertilized egg is determined by the two sex chromosomes. If the fertilized egg receives two X chromosomes, a girl will result; if it receives an X and a Y chromosome, a boy will develop.

The next sequence is introduced by live-action, but animation is used to explain the determination of certain physical traits, such as eye color and hair color. The function and pairing

Dept. E 315 West 33rd Street, New York 10, N. Y.

of genes are shown as the narrator explains that the genes in a human fertilized egg form the design or pattern of human heredity. Also, each living thing has its own unique pattern of chromosomes and genes in each cell because as the egg cell divides to form new cells, the chromosomes and genes divide also.

The film then considers culture as a determiner of some of our characteristics but also mentions that it cannot transcend basic human heredity. Similarities in the human pattern of inheritance are seen in an American baby and an African baby, but also shown are differences in the way the mother of each feeds and carries her baby.

The concepts of cultural, biological inheritance and dominant and recessive genes are then treated. The children of a brown eyed Japanese mother and a blue eyed Scandinavian father are seen to all have deep brown eyes because the gene for brown eyes is dominant to the gene for blue eyes. If one of the girls grows up, and marries a man with a recessive gene for blue eyes their child may have blue eyes but the possibility of its being brown eyed is greater. This combination of dominant and recessive genes determines family resemblances and differences.

Over a live-action sequence showing a Japanese-American boy playing with

his friends, the narrator states that clothes, customs, and beliefs may change but the imprint of heredity remains.

The scene shifts to a classroom where the narrator is seen to be a teacher. Using a flannel board, he reviews the information concerning sex chromosomes. The twins, Betsy and Karen, then explain, in response to a question, how identical twins are formed. This is followed by the teacher's explanation of the formation of fraternal twins. A girl then asks the question, "Are there genes for fighting?" To answer this question, the teacher holds up a picture of a baby with no clue to its sex. The class has a difference of opinion regarding the sex of the baby until a toy gun, a truck, and a doll are held beside the picture. The teacher then holds a fan and flower beside it. All in class then identify the baby as a girl but quickly the teacher tells them that in Southern Asia a young man's role is to be quiet and graceful, he may wear flowers and dance with a fan. One reason for boys fighting is because people expect them to.

Following this, many other questions are asked by the students. The teacher then steps forward and invites the student viewers to discuss these and other questions with their teacher.

## APPRAISAL

An excellent combination of live-action, photography, animation, and humor presents these provocative social, biological facts and principles in a clear and interesting manner. Not only does this film present information concerning the basic pattern of human heredity but it also shows how culture and environment may determine some of our characteristics. It is similar in format to its predecessor *Human Growth*; in fact, the words of the narrator at the conclusion in which he invites the viewers to discuss further the subject are identical in each film. This invitation plus the unanswered questions posed provide an excellent stimulus for post-showing discussion.

Most junior high students will find this film informative and interesting; however, before seeing it they would need to understand the meanings of certain words used in the film and would need to have some knowledge of the basic features of sexual reproduction. Some junior high teachers may find that additional preliminary reading on their part will be necessary.

This film also has much educational value for senior high students. Some college professors, however, may find the animation overly simplified.

— George Vuke

# Wheelit! Don't Carry It!

## Now! Wheelits are available in both Folding and NON-Folding Types

**Non-Folding Wheelit #4102**  
En route with machine and supplies (above). In stationary position for school room film projection (below).

The new NON-Folding Wheelit is designed primarily for room to room, floor to floor service where storage space is not limited. Its sturdy footbrake holds it stationary for projection purposes, and it makes transportation of machines, books and school supplies easy and safe.

The Folding Wheelit is compact enough to fit easily into an auto trunk, closet or other limited storage space.

Wheelits are perfectly balanced for heavy loads, surprisingly easy to steer and maneuver. They go up or down stairs, over curbs, around close turns, through narrow doorways and aisles. Specifications for the new Non-Folding Wheelit include:

- All-steel construction (except platforms)
- Load capacity up to 300 pounds
- Top platform height — 41 inches
- Second platform height — 14 inches
- 12" rear wheels with semi-pneumatic tires
- 4" rubber-tired swivel casters in front
- Thick, sound-resisting platforms with scuff-resisting Formica tops
- Heavy web straps to secure loads
- Foot brake for stationary use

# SOUND advice

about audio materials  
and equipment

by **MAX U. BILDERSEE**

## Why AV?

We have been hard put lately to express in simple and yet effective language the reasons for the emerging importance of audio-visual education in schools today and, even more, the true function and place of the audio media in instruction.

Somehow we have likened audio-visual materials to the mechanical devices of industry, admittedly a bad parallel, and we have interpreted the functions in terms of instructional outcomes. We do not believe that the audio-visual device has yet been discovered or developed which will make teaching or learning easier—that is—easier for the lazy teacher or student. Similarly there is fallacious thinking in the precept that appropriate use of these machines for instruction will appreciably reduce either educational budgets or the need for teachers.

Today's student must learn more than did the schoolboy of no more than a generation ago: And it must be learned in no more time. The teacher must excite new interests, maintain a higher level of student application to the tasks of learning over a longer period of time, and she must actually teach new facts and skills that were not considered a scant twenty years ago.

It is not appropriate to claim that education had reached maximum efficiency twenty years ago—or that teachers then were better equipped to instruct, better trained for classroom teaching, or more interested in their tasks. But it is true to state that today's parents, and their children, demand more of the schools than did the parents and children of the middle thirties.

These demands are served, in part, through the proper application of modern tools of communication to modern instructional problems in today's classrooms. Automation, through audio-visual materials and devices, does not make it possible for us to teach more to more students—but rather en-

ables teachers to help the same number of students learn more in the same or in less time. The current effort to double, triple, or quadruple the teaching load can only end in ineffective push-button education which may be less expensive, dollar-wise, but which will be far more expensive in terms of the relative value of the product.

## Campaign — '56

If the audio-visual devices and materials thus add to the teacher's efficiency, wherein do the purely audio materials, and the recording in particular, serve?

First, recordings can serve as a source of historical information. In this connection may we draw to your attention the new recording "Campaign — '56" (Yale Audio-Visual Department, 1779 Yale Station, New Haven, Connecticut). This is a recording of edited material beginning with the Democratic National Convention and culminating with the statements of Eisenhower and Stevenson after the polls had closed on November 6, 1956. The internal struggle of the Democratic convention is realistically and honestly reported as is the smoothness of the Republican meeting which followed. The campaign, unfortunately, is not as well summarized although certain vital statements are given adequate emphasis. The first forty-five minutes of this hour-long disc are devoted to selecting candidates for nomination, the last fifteen are given over to their respective efforts to gain the election. We feel that this imbalance is unfortunate, but not that it is damning.

We listened closely to the recording seeking political bias which would hamper honest reporting—and it is not there. But highlights abound and the voices heard are those of the men who made history—from the support given Mr. Harriman by Harry S. Truman (and his consequent open admission of defeat) to the Nebraskan who attempted to nominate "Joe Smith" for the Vice-Presidency.

Professors Lamar and Blitzer of Yale

University who edited the recording, producer Douglas R. Daniels, and narrator Gilliam all deserve credit for a difficult job well done.

### Heritage U. S. A.

While we are discussing recordings as a source of historical information, let us not overlook the recreations of events through which students may participate in actual situations and through which they actually vicariously observe events long past. In this category are many older discs, and many new ones. For example may we cite without appraisal new recordings as yet unheard by us titled "Heritage U. S. A." (Folkways) which include such items as speeches by Daniel Webster, John Brown, Edward Everett (at Gettysburg) and Abraham Lincoln and such documents as the Declaration of Independence and the Bill of Rights. And then there are the Enrichment Materials recreations which have been reported upon here from time to time.

### Speak Up

Second, recordings can serve as a source of information for personal training. One need only listen to the multitude of foreign language recordings designed to teach grammar, vocabulary and speech to recognize this. But this area is not the only one in which recordings serve. Any person, listening alone, can profit from the audio exercise. There are recordings designed to assist in speech training. May we draw your attention to a superior album titled "Speak Up" (Sonant Corporation, 6605 Hollywood Boulevard, P.O. Box 2807, Hollywood 28,

California)? These two twelve-inch 33-1/3 rpm recordings represent a simple direct approach to speech improvement. They can be used by classes working and progressing together, or they can be used by individuals to develop or to enlarge upon techniques of personal speech as well as public speaking. Dr. Frank C. Baxter, Professor of English at the University of Southern California says, in part, "I cannot fail to see how anyone who is in need of training and encouragement in public speaking or even in conversation, could not profit tremendously from the exercises so ingeniously presented on these records. . . . In recent years there has been a tremendous growing emphasis upon the basic arts

of communication." We can only echo this succinct statement and suggest the recordings to speech teachers in high schools and colleges.

### Literary Heritage

Third, recordings are rapidly becoming another manifestation of our literary and intellectual heritage. The "Talking Books" program for the blind is an immediate example. Further, there are many literary gems which are available for hearing at the pleasure of the listener. Examples of plays include a wide, increasingly wide, variety of Shakespearian documents. We need mention only such plays as "Macbeth," "Julius Caesar," "A Midsummer Night's Dream," "Othello," and,

a superb new Ampex

*designed for A-V needs and budgets*

**Now the best begins at \$395**...yet with this new price comes the extraordinary high level of performance you would expect from an Ampex.

**The A112** offers professional excellence in portable form and features: tape position indicator, simple two speed selector (3¾ and 7½ ips), and recording volume indicator. It's a rugged machine built for years of dependable performance, complete with lightweight portable carrying case.

**The Ampex A122** offers the same superb performance plus the amazing realism of Stereophonic Sound — an eloquent teacher for band, orchestra or glee club; priced at \$449.50.

Ask for a demonstration at your local Ampex distributor or write for further information to Dept. C-2854.

# audiotape offers EVERYTHING

*you want or need for educational recording!*

**UNIFORM QUALITY AND MINIMUM COST**—PLASTIC-BASE AUDIOTAPE on 1½-mil cellulose acetate, meets the most exacting requirements of the professional or educational recordist at minimum cost. Known the world over for matchless performance and consistent, uniform quality.

**PREMIUM QUALITY AND GREATEST STRENGTH**—AUDIOTAPE ON 1½-MIL MYLAR\* is a premium quality professional tape that provides the utmost in mechanical strength and immunity to temperature and humidity. Will not dry out or embrittle with age.

**50% MORE RECORDING TIME AND SUPER DURABILITY**—LR AUDIOTAPE on 1-mil Mylar gives 50% more recording time per reel. The strong super-durable polyester film base assures trouble-free operation even under severe conditions of heat and humidity.

**50% MORE RECORDING TIME AND MAXIMUM ECONOMY**—PLASTIC-BASE LR AUDIOTAPE provides fifty percent more recording and playback time on low-cost 1-mil cellulose acetate base, affording maximum economy on applications where high strength is not required.

**TWICE AS MUCH RECORDING TIME**—SUPER-THIN AUDIOTAPE on ½-mil Mylar gives twice as much recording time per reel as standard

plastic-base tape. Suitable for extended-play applications where tape tension is not excessive.

**NO MATTER WHAT YOUR EDUCATIONAL APPLICATION, REGARDLESS OF THE TYPE OF RECORDER, THE COMPLETENESS OF THE AUDIOTAPE LINE AND THE HIGH STANDARD OF AUDIOTAPE QUALITY ASSURE YOU OF BEST RESULTS.**

**AUDIO DEVICES, Inc.**  
444 Madison Ave.,  
New York 22, N.Y.

of course, "Hamlet." But modern plays are being recorded, too. These will include "Waiting for Godot" and "Don Juan in Hell," among others.

Books and stories, too, are available in the audio form for classroom listening or for home reproduction. Kipling's "Just So Stories" is represented as are such classics as "The Three Musketeers," "Oliver Twist," "Treasure Island" and "Robin Hood." This cannot be considered as other than a mere beginning to a long list.

It is obvious to all interested in the art forms and literature that most of the poetry with which we are acquainted is intended for hearing, not for reading. The lover of poetry often reads to himself—aloud. And he enjoys listening to the wide variety of poetic offerings on disc. If you wish examples, there are "Pleasure Dome," "An Evening of Elizabethan Verse," "The Poetry of Keats and Shelley," "A Round of Poems," "Worlds of Literature" and Carl Sandburg's "The People, Yes" to mention just a few which come to mind. Add to this, if you wish, such titles as "Early English Ballads," "English Lyric Poems and Ballads," "The Song of Hiawatha" and "Readings from 'The Leaves of Grass,'" which have been released within the past few months and which we anticipate reviewing shortly.

## New Art Form?

An area which is yet to be fully explored, but which is slowly opening, is the development of audio material for recording without passing through the hands of the printer. We expect that a new literary art form will develop, and that sounds will be prepared for listening and perhaps never published in the usual sense of the word. Authors, particularly those who have had broad experience in developing material for broadcast presentation, will lead this movement. And we believe that publishers of records who know sound, respect it for what they know it can mean, and who have purpose beyond the mere sale of another disc will lead in the publication of this purely audio material.

## Another Responsibility

These, then, are a few of the functions admirably served by audio materials in the classroom. Yet there is another responsibility we as teachers face and fully comprehend. And we must use every device of audio communication if we are to even partially discharge our obligation to pupils and parents.

In this world of instantaneous communication, ideas and precepts can be attractively "packaged" and can sweep across communities, states, regions, and nations literally with the speed of light. And unless the child is trained not only to hear but to listen and appraise critically, the broad generalities of the rabble rouser may indeed engulf us who are proud in our defense of freedom of speech. A soundless Hitler, or a non-communicating Mussolini, is a threat to a few—just as a widely heard Roosevelt, Eisenhower or Churchill can rally the peoples of the world to the defense of the liberties of us all. All must be heard, for in denying speech to one while granting it to another, we defeat the principles we argue.

The listener is the key. He must select the wheat from the chaff, the

true from the false, the good from the bad. He must be a discriminating listener—and able to comprehend ideas and their implications in this day of instant communication. We strike out against the printed dissemination of false ideas—and we teach literacy, the selection of material to be read,

and ideas to be accepted. Similarly we must practice children in listening so that the words "literate" and "audiate" become parallel in the highest intellectual sense. We must stress "audiacy" as the antidote to the audio idiocy just as we stress political participation as the antidote to domination.

# New Filmstrips

Described and evaluated by **ROBERT CHURCH, WALTER PILDITCH, and HAROLD WARD.** Producers should send review copies of filmstrips to Robert Church, Audio-Visual Coordinator, Herman Felsenfhal School, 4101 S. Calumet Ave., Chicago 15, Illinois.

## FARM & CITY SERIES

(Young America Films, 18 E. 41st St., New York 17, N.Y.) Color. Subject area: Social Studies. Grade level: 2-1.

**Life on a Small Farm** (38 frames): Story of Johnny and Linda Hall, children on a small farm in Green Valley. Emphasizes duties of each member of the family. Shows hobby developing from duties. Excellent color.

**Life on a Large Ranch** (42 frames): Contrasts life on a ranch with life on small farms. Shows relationship of jobs and activities, but difference in scale of operation. Betty and Bobby, the main characters are about ten years old.

**Life in a Small Town** (34 frames): Story of life in a little town. Depicts life in a small town as friendly. Good concept of neighborliness.

**Life in a Large City** (36 frames): Contrasts life of boy and girl in a large city with life in a small town. Brings out the large number of industries and workers needed to support life in a city. Good frames on transportation.

## A DAY IN THE LIFE OF A SENATOR

(Visual Education Consultants, 2066 Helena St., Madison 4, Wisconsin) Black and white, 29 frames. Subject area: American Government. Grade level: 7-8.

Pictures duties in daily routine of a senator such as taking care of mail, attending committee meetings, work in the senate chambers, radio interviews, consulting with his constituents, meeting with the president, and consulting with his colleagues. Includes vocabulary study of words used throughout filmstrip.

## WORLD HISTORY SERIES

(Society for Visual Education, Inc., 1345 Diversey Parkway, Chicago 14, Ill.) Color. Subject area: History. Grade level: 6-8.

**The Old Stone Age** (39 frames): Gives a good pictorial study of the beginning and development of man through this age. It correlates well with following filmstrips in this series. The pictures are good and the words used easily comprehended. The various pictures offer good discussion points with charts added to demonstrate and compare the various levels and periods. The strip shows important periods of age very clearly.

**The New Stone Age** (41 frames): This and above filmstrip fit together and the comparisons are made between the early and later periods. This film finishes up with very good pictures showing examples of people who today are living in a Stone Age! Also of merit is that each film shows contributions made to mankind during these periods.

**The River Cultures—Egypt** (49 frames): Strip covers prehistoric. Old Kingdom. New Kingdom or Empire, and later Egyptian periods in Egyptian history during the years of 3400 B.C. to 30 B.C. Facts about the importance of the Nile River and building are presented. Transportation and important contributions to civilization are included. The reading matter was the level that upper grade children could understand.

**The River Cultures—Mesopotamia** (48 frames): Strip covers periods including Old Babylonian, Small State, Assyrian, New Babylonian, and Persian Empire periods during the years covering 4000 B.C. to 333 B.C. Material includes maps of areas with diagrams and photographs of art, armies, and writings of the various periods. Information on farming and religious personalities of the ages is included. Strip covered the material required in the course of study.

# Church department

by WILLIAM S. HOCKMAN

## AV Usage in a Large Church

What is the volume of AV usage in a large church? In the run of a year, how many AV items would be used, and how would they be distributed across the various media? In terms of attendance, what would the total of all AV audiences amount to in a church of 3400 members?

The answers to these, and other interesting questions, can be found in the year-end report (for 1956) of the AV Co-ordinator of the Westminster United Presbyterian Church of Des Moines, Iowa. Mr. Harry R. Peterson, AV Co-ordinator for the Des Moines Technical High School, must keep pretty accurate records if he can submit on December 31 a summary of AV usage in his church for that year. Having been at it for eight years, he had developed know-how and know-what, and communicated a lot of both to the leaders of his church.

He says, "The presentation of a total of 170 different items last year was a record for us. You will notice that we are using more sound filmstrips than motion pictures. We are building up our AV library and it is paying off, but the training and instruction of our church school teachers is a continuous procedure."

Here is a breakdown of that 170 items referred to above: films, 49; sound filmstrips, 81; filmstrips, 28; sets of slides, 8; recordings, 1; taped material, 1; opaque material, 2. Thus over 50% of all material was used in one medium, the filmstrip. (For a church of this size we might have expected the use of more material in the last three media.)

This usage reached a pretty large audience: 3,080 saw films; 11,073 saw sound filmstrips; 1,677 saw filmstrips, and 580 were present when the other four media were employed.

What were the sources of this material? Significantly, only 15 of the 49

film usages were on a rental basis. This means that free films were used in 33 instances. The church's own AV library was the source of material in 122 instances, indicating something of the size of their library, which is being built up rapidly.

Who is using this material? Grades 4 through 9 are listed as "frequent users." Listed also are: The Advanced Primary, Primary, Mariners, High School, Vesper Hour, Supper Club, Men's Club (where some of those "free" films were used, without doubt), Nursery Mothers, Boy Scouts, Teacher Training, New Members Class, Vacation Church School, and the Open House program.

The church owns a print of the film, *Martin Luther*, lending it to other churches and institutions 7 times and showing it three times within the church—Ninth Grade, Supper Club, and Vesper Hour. Twelve times the church loaned AV material and equipment to other churches, and that great old classic film, *King of Kings*, was featured at a Pre-Holy Week Service.

This is a fine record, and we congratulate both the church and Mr. Peterson.

## No Need to Visualize

When?

Well, to capsule the whole idea: when the "customer" has had his head full of images already!

In the run of a year I see quite a bit of material cast into audio-visual media when it really should have been given audio form.

I refer to certain types of filmstrips and films. The image-stream is familiar and weak; the word-stream is new and strong. Trying to show and tell at the same time, they are doing neither with real psychological impact.

I am thinking of a certain expensive color motion picture. The target audience is high school youth. Everything in the image-stream is familiar to such

young people. There is nothing new, and the structure of the pictorial flow is old hat.

Not so the auditory! It's doing the work. It has traction with the mind. It bids for attention and gets it. All the way it is driving the message home. But not so the visual, the audience is familiar with every scene; produced head-on, and with the stare of a calf seeing a new gate for the first time.

Take another film—how lepers live in a colony in India. Here an image-flow will be needed. Why? Because the target audience (of youth) can't supply the pictures. They need to see *and* hear, and in a good audio-visual the burden of meaning will be loaded somewhat equally onto the pictorial and the auditory if the producer knows his stuff.

Have we a principle, then? I think we do: if the target audience can supply reasonably satisfactory pictures, why not concentrate our efforts on producing a well-structured, first-class audio aid rather than waste money supplying pictures to those who already have a head-full of images on the subject which will bob into consciousness as the auditory stream of ideas engages the attention?

That's how it strikes me, at any rate!

## Green Lake in 1957

The Fourteenth International Conference on Audio-Visuals in Christian Education will be held at Green Lake, Wisconsin, the week of September 4-11, under the general auspices of the National Council of Churches and the specific guidance of the Committee on Audio-Visual and Broadcast Education with the Broadcasting and Film Commission cooperating.

Yes, that term "conference" belongs. It was chosen as a better umbrella word than "workshop" to cover the multitude of activities and interests of the week at Green Lake.

The overriding theme for this year's

conference will be, "Re-thinking Basic Issues in Audio-Visuals," and the subjects chosen for critical presentation and discussion at the morning assemblies are:\*

*Choosing the Best Media for Specific Jobs and Purposes.*

*Re-thinking Biblical Visualization.*

*Strategy in the Use of the Mass Media in the Total Work of the Church.*

*Critical Reappraisal of Distribution Patterns.*

*Integrating Audio-Visuals Into the Curriculum Production.*

After the morning assembly, five seminars will meet and ten work groups will get under way, each meeting again in the afternoons. This year the evening review sessions will be structured differently from other years, and as usual the day will end with opportunity for group and individual previews.

## Film & Filmstrip Notes

• Southern Films (179 Spring Street, N.W., Atlanta 3, Ga.) is the source of three color filmstrips, each treating two subjects, with about 12 frames to each. The titles are: *I Know My Sheep and Beasts of the Fields* — the work of an Eastern shepherd and the common animals of Palestine. *Man Goeth to His Work and Birds of the Air* — workers of the Bible and some of its birds. *A Sower Went Forth and Men of Skill* —

\*Subject to slight change and refinement as promotional material is evolved.

the story of bread from field to oven and craftsmen mentioned in the Bible.

The commentary is printed in booklet form. It faces its picture, making study and preparation by the user much easier. It is accurate and informative. Useful for all ages, this series is recommended especially for the lower grades in vacation, week-day, and church school. They come at \$6.00 each, and deserve your consideration as possible additions to your AV library. If you can afford only one, let it be the last title.

• *Solomon's Temple*, an 18-frame color filmstrip, has pictures of a model by E. G. Howland and mimeographed commentary notes by Paul Leslie Garber. While popular, this presentation is based on scholarship. Acceptable qualities; available from Southern Films (address above).

• If you are making notes on filmstrips to have on hand for next Christmas, you can put down this title in your little book: *Christmastide*, a 38-frame, full-color, LP-recorded high-utility production by Cathedral Films, Inc. (Burbank, Calif.). It presents the Lucan story first and then adds Matthew's coming of the Three Kings. The artwork is good all the way; excellent in spots. The commentary, one side of the record for children and the other for young people and adults, is a nice blending of explanation and Biblical text, and well narrated in each version. The background music, lovely Christmas tunes, adds greatly to the effectiveness of the presentation. It is highly recommended. (Since the above was written, this filmstrip has been

## RADIO & FILM COMMISSION

So. Calif.—Ariz. Conference, The Methodist Church, 954 W. 37 St., Los Angeles 7, Calif.

used in my church school and lent to a neighbor church, winning nothing but praise and appreciation in each instance. — WSH)

• *The Growing Household of God*, a 77-frame full-color photographic filmstrip with printed scripts for adults and children, is a recent curriculum release by Christian Education Press (E & R) designed to give adults a kaleidoscopic view of the work and growth of overseas churches as they share the Gospel in word and deed with all races and conditions; and to emphasize for children the common experiences of Christians throughout the world. Selected from many sources, these pictures lack harmony and vary considerably in intrinsic qualities. In this type of filmstrip most of the burden of meaning is brought to the pictures, some of them actually "saying" nothing until quickened by the narration.

It is quite possible that the producer could have conveyed his message in a neater, shorter, and more attractive package if he had designed pictures to carry increment after increment of this total message, and then constructed a commentary to accent and supplement what the pictures "said." Even with highly selected photographs, there is much in every picture which is *not* precisely germane to what the filmstrip is trying to say and show at that particular time.

To this reviewer the pictorial and the auditory were not psychologically integrated, with the result that the attention of the viewer oscillates between the two foci of the filmstrip—the visual and the auditory, the latter dominating. When this happens to the viewer, the progression of meaning and the impact of the filmstrip are seriously weakened. And this brings us to the problem of when to use art and when to use photographs in making filmstrips.

## AV "On the Double"

Continued from page 133

sound films owned by the Los Angeles City School Districts that apply to his work, but also a large number of technical films secured from industry itself. A large part of the service of the audiovisual office on campus lies in the negotiations for use and safe return of these industrial films.

A student who wishes to increase her shorthand speed comes to the department and signs for use of an auditing room. Gregg dictation records at speeds suiting her needs are furnished and the only possible drawback to her increased proficiency up to this point has been the personal factor involved in her application to the task.

All the usual classroom uses of audiovisual aids are carried on as a matter of course. We show on our statistics an average of 1.3 uses for every film received on campus within the week we have it. I should explain here that, in common with other schools of the Los Angeles City School Districts, we draw from a central AV collection. Films are delivered and picked up after one week. Other AV aids remain for two weeks. This 1.3 average is not great until examined in the light of the fact that sometimes the press of class time doesn't permit the use of a film that has been ordered and delivered. We can easily see, then, that some other film ordered and delivered has to be used 2 or 3 times to make the average.

Another service rendered is that of preview. New films and filmstrips are selected from the host of material offered by film distributors, AV centers and private industry. Our AV center on campus obtains preview prints and instructors who are concerned with the subject matter involved view them in the preview room. Suitability and grade

## CONTROLLED OPTIMUM PROCESSING

level are considered as are presentation, technical aspects of production and ultimate possible uses (the more the merrier). Recommendations to purchase or not to purchase are made on two levels: (1) for the Los Angeles City School Districts, as a whole and (2) for our local needs, since our campus has some courses no other junior college in Los Angeles offers. On occasion, one print only of a film or film-strip may be purchased and sent out on "permanent loan" to a junior college.

Especially in our night program, we have a large number of instructors who come in from local industry, i.e., aviation, petroleum, diesel motors, and marine engineering. Added to these are men from various municipal services such as the Department of Sanitation, and the Police and Fire Departments. They bring many AV aids to our students from their own AV libraries. In effect, this extends our AV services, since equipment to show these is our standard school equipment, and since they add their AV resources to ours.

A further service rendered by our school AV office is that of instructing students and teaching staff in the use of any equipment with which they are not already familiar. Many students come to us from high schools in the Los Angeles City Schools and bring with them cards certifying their training in the use of audio-visual equipment. They can assist greatly in the classroom presentation, and often do so. However, if their training and experience have been confined to one model or to the products of one company, we find it advisable to check their use of equipment BEFORE something happens.

Our latest activity involves the making of some aids of our own, directly applicable to our particular campus situation. One is a series of training films showing athletic techniques and body actions involved in the major sports. These will be filmed by instructors trained in filming as well as in kinesthetics. The other is the making of a series of slides to accompany a sound tape to be used in orientation work and with adult evening classes for the purpose of introducing the library and library procedures.

On our particular campus, AV services are housed in the library and administered by the library staff assisted by an audio-visual technician. We are looking forward to the greater service we may render students and faculty by having catalog cards in the main library catalog to cover AV holdings.

As for "stimulating the faculty" to increased AV use — not until we catch our breath from this on-the-double cycle we're in, please!

## Letter from Paris

Continued from page 134

the Marshall Plan, had not invested large sums of U. S. dollars in the development of audio-visual education centers for helping industry and economic recovery. Recognition of this fact is of great import; and as a post-script, it should be added that Europeans are very appreciative of this help.

## The Published Word

Now as to the influence of the published word: In my first letter I mentioned that one of the first magazines to which my attention was called when I started working with EPA was EDUCATIONAL SCREEN. Now I can report I have seen it in many places in Europe. For example, while in Vienna this summer a student from the University of Vienna at an AV seminar referred to several articles in this magazine as he held up two issues. Later I learned that he has a complete file for several years back and that it is regularly read by many education students in the University. (This young man made me feel especially good by telling me he knew me through reading EdSCREEN!) A friend in Finland writes that he avidly reads EdSCREEN each month from cover to cover. And so it goes. Another publication which is widely read and popular among AV workers is *Business Screen*, and I shouldn't fail to mention that *Communication Review* is held in high regard by the "fraternity" here. The book most in demand is Edgar Dale's *Audio-Visual Methods in Teaching*; there are a good many copies of it in use. It appears to enjoy the

highest reputation of any American textbook in this field. All these things are evidence of American leadership in AV.

## American Industrial Films

The influence of American-produced industrial films is great. In many ways these are the cornerstones of the National Productivity Centers' film libraries in many of the countries. True, this may be a natural consequence of using Marshall Plan funds in helping to set up the film libraries, but there are other reasons for their being in such demand. They are well produced and show advanced production methods. The fact that sound tracks in many languages have been put on these films further attests to their value. It should please our American film producers to know that they have and are contributing to bettering the standard of European living — at least indirectly.

There is a block of American films, even though produced during the war period, that are still so fundamental and so sound that they are being widely used more than a decade later. These are the United States Office of Education training films in the areas of machine operation, supervision, agriculture, and measurements. Many of these have been translated into every Western European language and are being used to help develop basic skills in vocational schools and in on-the-job training programs.

## Now as to People

The first group of people are those who, though not present, have by their

FOR TEACHING & SELLING

USE SELECTROSLIDE!

Modern teaching methods, like modern selling methods, call for reliable working tools and SELECTROSLIDE gives trouble-free operation; brightest picture on the screen, and scores of other benefits.

From the JUNIOR to the STANDARD to the TWIN-SELECTROSLIDE nothing beats them, built with more than 32 years of experience, to out-perform and out-last all others.

SELECTROSLIDE is the "diamond" of fully-automatic-projectors...nothing finer...nothing more enduring...and there is a SELECTROSLIDE to fit your projection needs. Contact your local Audio-Visual Dealer for demonstration or rental of SELECTROSLIDE, or consult us.

## Color Filmstrip Service for Educational Producers

A scene in the Manhattan Color Lab filmstrip on "Alexander the Great" processed for Dr. William Lewin.

Let us do all or part of the work you require in color processing. No order too small or too large for our special educational department.

### Manhattan Color Laboratory

254 W. 54th St., New York 36

efforts elsewhere affected the situation. This list, as I've already implied, is rather easily made, and the salutes go to you Paul Reed as editor of EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE, to Ott Coelln, as editor and publisher of *Business Screen*, and to William Allen and Kenneth Norberg as co-editors of the *DAVI Communication Review*. Then there should be recognition for Edgar Dale as author of *Audio-Visual Methods in Teaching* and for Floyd Brooker, presently the Executive Secretary of DAVI, who was formerly with the U. S. Office of Education in charge of its training film production program. Of course, none of these persons worked alone to make this contribution, and so the unnamed co-workers must take satisfaction from the fact that they also helped.

There are about a dozen American audio-visual education leaders, who have visited Europe for periods ranging from a few months to several years and who without question have left their mark. In some countries this is true to a remarkable degree, for example, Norway. To mention all of these persons and describe their contribution would be too involved for this letter and would run the risk of slighting some. However, none of these persons could have done an effective job without some inspired leadership for the entire project, and the person who has exercised a profound constructive influence on European AV education is Howard Kresge,<sup>2</sup> now with the United States Regional Office covering Western Europe.

Howard Kresge is the one American who by his presence here over a period of years in the discharge of his official AV responsibilities, by his appreciation of the fundamental elements of audio-visual education that are pertinent to European conditions, and by his tact, his persuasion, patience and perseverance, has easily, in my opinion, made the major contribution to the development of audio-visual education in Europe.

I can report to you that the contributions of our resources and our people are deeply appreciated by those Europeans I have talked to and worked with. They have helped mightily in the efforts of western Europeans to keep free from Communistic economic and political domination. There is of course much more to be done, but we can be grateful for the progress made to date.

Cordially,  
Francis W. Noel

<sup>2</sup>See "Story of the ECA Film Project," October, 1952 EdSCREEN, page 322. See also "The Oslo AV Workshop," March, 1954 EdSCREEN, page 102. Both articles were written by Howard Kresge.

by ROBERT E. SCHREIBER

For more information about any of the equipment announced here, use the Reader's Service Coupon on page 160.

**Admiral Folding Viewer.** For 35mm slides and filmstrips, the pocket-sized viewer features a dual lens system for maximum magnification and color realism. Folds flat for lens protection. In two-tone plastic case.

For more information circle 101 on coupon

**Allied Impex Ultrablitz Jet Flash Unit.** \$69.95. Lightweight and compact, the Jet pack weighs 3 lbs., 9 ounces and measures 8½ x 6 x 2½. Full power gives 8-watt seconds of consistent output with guide number of 250 for b&w, 65 for daylight color. Speeds at 1/1000 second at full power; 1/2000 second at half power.

For more information circle 102 on coupon

**Bell & Howell's New 16mm Magnetic-Recording Projectors.** The 302E in a single case with built-in 8-inch speaker is \$734; the 302D is available with a 12-inch speaker at \$814 or with a 25-watt speaker at \$884. A 50% power increase with distortion free sound are features of the new models.

For more information circle 103 on coupon

**Bell & Howell Wide Angle Attachment.** \$22.95. Affords 125% more field coverage than the regular 10mm lens, the new wide-angle attachment is available for all Wilshire and Manterey 8mm cameras. Price includes

Bell & Howell Magnetic Projector

filter-holder and retaining ring for a size 5 filter. Threads directly into lens barrel of all B&H Sun Dial 8mm cameras. Requires no exposure increase and yields sharp images as close as six inches.

For more information circle 104 on coupon

**Beseler Glassomot Dryer.** \$245. The Model 400 has a capacity of 50 8x10 prints per hour. Rotary drum is made of highly polished, seamless stainless

steel; has a built-in squeegee, variable speed drive connected to thermostatically controlled heat element; can produce glossy or matte finished prints.

For more information circle 105 on coupon

**Beseler Miniature Enlarger.** \$139.75 less lens. For smaller negatives from 8mm to 2¼ x 3¼, the Model 23C uses any size negative without changing condensers since the negative stage remains stationary and the condensers move up or down. Permanent built-in guide assists in adjusting to pre-selected positions. Counterbalance springs completely hidden and protected. Horizontal projection at 90 degrees with automatic lock.

For more information circle 106 on coupon

**Brumberger Automatic Slide Changer.** The Model 140 handles 2¼ x 2¼ transparencies in all types of mounts. A simple push-pull of the changer handle centers slide for projection and removes last slide to pick-up platform. For any Brumberger 2¼ x 2¼ projector.

For more information circle 107 on coupon

**Comero Specialty Edixa Camera.** \$99.50. The Edixa 6 x 6 is a fully automatic twin-lens reflex camera in the 2¼ x 2¼ size with f:2.8 Steinheil lens. Features two coated 80mm lenses, built-in magnifier in viewfinder, built-in strobe, body release, focusing from 3.3 feet to infinity, stops down to f:22.

**Cousino's New Self-Threading Tape Cartridge.** The new unit is compatible with the original standard cartridge and provides one hour of recording time. Threading is accomplished by pushing the cartridge into the playing slot of specially designed playback units. Cartridge is ejected automatically with the tape re-wound ready for next play. Application in office dictating equipment, juke boxes, automobile playbacks, and other possibilities are now on the drawing boards.

For more information circle 109 on coupon

One-hour Cousino cartridge (left) is compatible with original cartridge on the right.

**DuPont TV Recording Film.** Faster, finer-grained, low-contrast photographic film for television use is the new Type 834. It is approximately 2½ times faster than type 824 and is designed for photographing either negative or positive images on television monitor tubes. Its use permits either a reduction in the drive on the kinescope tube to reduce image flare or use with a smaller f-stop to improve depth of focus. Available in 16mm and 35mm sizes.

For more information circle 110 on coupon

**Enteca Polari-Vue Screen.** With color films, it yields a spectacular rendering of subjects against a dark blue sky; can also control reflections from glass, water, wood, and other nonmetallic surfaces; or can be used for movie fade-ins, fade-outs, and lap dissolves. Threaded to accommodate adapter rings and lens hood. With viewer.

For more information circle 111 on coupon

**Exakta Wide Angle Lens.** \$149.50. The new f:2.8, 35mm Flektogon is the first wide angle lens with automatic diaphragm for 35mm photography. Computed for the Exakta VX, this six-element lens has a 64-degree angle of view. Lens is operated by a clutch-control sweeping lever which opens diaphragm to its widest aperture. A single pressure of the release button closes the lens to pre-selected aperture and trips shutter.

For more information circle 112 on coupon

**Graflex Projector Slide Timer.** \$14.95. An accessory for the Constellation Projector, the unit provides completely automatic operation of the 35mm projector and will hold slides on the screen for intervals from 5 to 30 seconds. Also applicable to any projectors equipped with an Airequipt magazine and remote operation.

**Pianorama** mp WURLITZER 28min sd  
col or bGw free. This unusual film be-  
gins by establishing the advantages of  
owning a piano, especially by families  
having young children who should be-  
gin a musical education. The produc-  
tion then moves to a detailed, step-by-  
step study of modern and highly skilled  
manufacture of a spinet piano — be-  
ginning with the arrival of selected  
woods at the Wurlitzer factory's sea-  
soning, drying, milling, planing; de-  
signing of cabinets and specialized  
machinery; assembly of sounding  
boards, backs, installation of strings;  
finishing; five tuning operations; and  
other aspects of the production opera-  
tion. No advertising. JH-SH.

VICTOR GUARDOMATIC SAFETY FILM TRIPS  
go into action**

With Victor's exclusive Guardomatic Safety Film Trips always on the job, your films are completely safe. Valuable films are safeguarded so your film budget can go toward building a finer film library, rather than buying replacement film. This Victor feature increases projector usage because it builds teacher and student operator confidence.

Check ALL these advantages of Victor 16mm Projectors:

1. Easy 1-2-3 threading and operation
2. Hi-Lite optical system for maximum screen brilliance
3. Sapphire-tipped shuttle for longer service
4. Lubrimatic Oil System with one-spot filling
5. Still picture, reverse, power rewind, and many others

# Photoplay Filmstrips in Color, \$7.50

**The Glass Slipper**—The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. **\$7.50**

**Knights of the Round Table** — A set of two filmstrips. Part One, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. **\$7.50.**

**Adventures of Robinson Crusoe** — In full color, 50 frames, a clear pictorial guide to the Defoe classic, based on the United Artists screen version. **\$7.50**

**Richard III** — Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. **\$7.50**

**Romeo and Juliet**—Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. **\$7.50**

**Alexander the Great** — Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. **\$7.50.**

**Greatest Show on Earth** — In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. **\$7.50**

**Hansel and Gretel** — In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kinemins of Michael Myerberg's screen version, released by RKO Radio Pictures. **\$7.50.**

**Ulysses** — In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. **\$7.50.**

# Exclusive RADIANT construction...

## Guarantees

RADIANT  
WALL AND  
CEILING  
SCREEN

with  
**Automatic**  
SAFETY ROLLER  
LOCK

- Screen will not pull off roller
- Screen will not lower beyond full picture size
- Roller will not sag or warp

Young or inexperienced helpers can cause serious damage to a projection screen fabric. *But not with the new Radiant "EDUCATOR" Wall and Wall-Ceiling Screens!* Radiant engineers have fully anticipated the rough usage to which these screens are subjected. They have provided an exclusive Automatic Roller Lock which positively prevents the screen fabric from being pulled off the roller, and also prevents the screen from being lowered beyond full picture size. They have provided an all-metal Roller which cannot sag or warp. They have provided rugged fool-proof construction that assures long years of efficient service. The Radiant "EDUCATOR" is your best Screen Buy — at any price!

FREE

**The most complete  
Line of Screens  
in the World!**

There is a Radiant Screen for every projection need, from the 30" x 30" Jiffy to huge CinemaScope-type screens measuring up to 30 feet or over. This includes table, tripod, wall and wall-ceiling screens in a wide range of sizes. Send today for the new Radiant Screen Guide, which tells you how to select the type of screens that best fill your needs.

EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE is published monthly except July and August by The Educational Screen, Inc. Publication office, Barrington, Illinois; Business and Editorial Office, 2000 Lincoln Park West, Chicago 14, Illinois. Printed in the U.S.A. Re-entered as second-class matter October, 1953 at the post office at Barrington, Illinois, under the Act of March 3, 1879.

ENTIRE ISSUE COPYRIGHT 1957 BY THE EDUCATIONAL SCREEN, INC.

Which one of these meters is used for audio-visual purposes?

**ANSWER:** The one on the right is the conventional photographic meter which gives light intensity. The one on the left gives foot candles, which is the measure of light used for audio-visual purposes.

*Even though both meters show that rooms equipped with LEVOLOR A-V BLINDS give a zero reading, our Audio-Visual Department believes that the maximum darkness of the room is not the major consideration! The lighting conditions of an audio-visual room should be at the complete*

discretion of the instructor. Various conditions and various subjects require elasticity in the control of light. This control should be simple and immediate.

The Levolor A-V Blind enables the instructor to change the room from maximum darkness to a soft diffused light—in a matter of seconds—all by an adjustment of the slats.

Full details and specifications will be sent on request. Write to LEVOLOR LORENTZEN, INC., Audio-Visual Dept. 720 Monroe St., Hoboken, N. J.

Be sure to specify

**LEVOLOR** *TRADE MARK OF LEVOLOR LORENTZEN* **A-V**

# Breaks through LEARNING barriers

## ...speeds understanding

You'll be amazed at how much faster... how much more thoroughly... your students can absorb new information when you enlarge your teaching scope with this Bausch & Lomb Balopticon® Projector. So versatile that your imagination sets its only limits! With this one instrument you can project big, brilliant, sharply detailed images of:

- **SLIDES**—student-made or commercial.
- **OPAQUE OBJECTS**—drawings, photographs, pages of books or magazines, science specimens, maps, students' schoolwork, etc.
- **FILM**—commercial film strips or individual frames (Film projection attachment optional).

Help your students learn better by helping them see and understand better with a Bausch & Lomb Balopticon Projector.

## Cover: A Boy Listens

It may seem that boys are just not made to listen. To talk, to yell, to run, to jump, yes—but not to listen. In today's classroom, however, some boys are learning to listen. Who wouldn't be interested in hearing how he sounds on a tape recording he made himself?

The cover picture is one of many illustrations in a booklet titled, "The Tape Recorder in the Elementary Classroom" (Minnesota Mining & Manufacturing Company). For more about the booklet, see page 180.

## April Is Audio

Audio-visual enthusiasts are often accused of overemphasizing the visual, especially the projected visual, and of underemphasizing the audio. No such accusation can be made against this issue of *EDSCREEN & AVGUIDE*. True, you will find herein many of the regular features covering the visual media of communication (Evaluation of New Films, page 192; Church Department, page 200; New Filmstrips, page 205; New Materials, page 206). But in the feature articles of this issue we have given special emphasis to the strictly audio teaching tools: the tape recorder (pages 180, 182, 188); intercommunication systems (page 184); disc recordings (page 186), and radio (page 191). In addition you will find, of course, Pat (short for Max) Bildersee's monthly "Sound Advice" (page 196).

Although the articles don't pretend to cover *all* the exciting uses of audio teaching tools in and beyond the classroom, they do suggest some significant ways in which audio equipment and

materials can make communication and learning more fun and much more effective.

## May Is Coming

The May issue will bring the first of two articles on the production of audio-visual materials within school systems. And you'll find an excellent (we think) report on the audio-visual facilities and activities at the Harvard Business School. The new Business School building provides not just *one* fancily equipped audio-visual room; *all* rooms are well equipped audio-visually.

In the May issue also you'll find an article about how Johnny can and is learning arithmetic—with the help of old and new teaching tools. Audio-visual directors will be especially interested in a provocatively presented description of what they are or ought to be—"10 I's for Audio-Visual Directors."

## June Is Going

With this April issue of *EDSCREEN*, I am leaving my editorial responsibilities in the very capable hands of others in order to devote full time to my work with mentally handicapped young people in a private school in Oak Park, Illinois.

After almost a decade at my *EDSCREEN* desk (and more than that since I entered the audio-visual field via SVE), it is not easy to say goodbye. So I won't. The many friends I've made I shall hope to continue to see and hear about in and out of the pages of my favorite audio-visual magazine.

My warmest thanks to all of you in the audio-visual field for some of the best years of my life. — JNS

## EDUCATIONAL SCREEN & AVGUIDE

### EDITORIAL STAFF

PAUL C. REED, Editor. JUNE N. SARK, Managing Editor. WILLIAM S. HOCKMAN, Editor for the Church Field. L. C. LARSON, CAROLYN GUSS, and JOHN FRITZ, Editors for Film Evaluations. MAX U. BILDERSEE, Editor for the Audio Field. ROBERT E. SCHREIBER, Editor for the Audio-Visual Trade Review. PHILIP LEWIS, Technical Editor.

### BUSINESS STAFF

H. S. GILLETTE, Publisher. MARIE C. GREENE, Associate Publisher. JOSEPHINE H. KNIGHT, Business Manager. PATRICK A. PHILIPPI, Circulation Manager. WILMA WIDDICOMBE, Advertising Production Assistant. General Consultants: Educational & Recreational Guides, Inc. (WILLIAM LEWIN, President, and RUTH M. LEWIN, Vice-President).

DON WHITE, Executive Vice President, National Audio-Visual Association, Evanston, Illinois

it's time to preview  
new  
coronet films

FOR HIGH SCHOOLS

Sixty-six new Coronet films are now available for preview to help you with your spring and summer purchasing. These films, like every Coronet film, were produced within our own organization to correlate with instructional units in your textbooks. You can rest assured that these films meet the highest educational standards. Six of the newest releases are described below. To preview these, simply use the coupon. If you would like a list of the 66 Coronet films released during the past year, we shall be pleased to send it, so you may request those of interest to you.

**English Literature: The Romantic Period** (1¼ reels)

Writers of the Romantic period gave voice to a changing world and the dramatized selections from their works, presented in this film, will give students an eye-witness view of this revolutionary age. Burns, Wordsworth, Coleridge, Blake, Byron, Shelley, Keats and Scott—the leading lights of the romantic literary movements—are shown in all their individuality and independence of spirit.

**English Literature: The Victorian Period** (1¼ reels)

The literary giants of the Victorian period verbalized, defended, and questioned the ideas of an unusual age. This film discusses the works of the most prominent among them—Macaulay, Carlyle, Darwin, Huxley, Newman, Dickens, the Brontes, Hardy, Ruskin, Arnold, and Carroll—and draws the student into a world of literary genius, originality, and intellectual ferment.

**Fossils: Clues to Prehistoric Times** (1 reel)

This film is the exciting story of fossils—where they are found, how they were formed, and what they tell us about the development of life on earth. Science pupils will find this a clear and dramatic explanation of the work of scientists and of their findings as they view museum dioramas, animation, and a large variety of fossil specimens.

**Australia: The Land and the People** (1½ reels)

This study of the "land down under" seeks to answer a number of important questions about the world's largest island continent, questions about climate, major economic activities, a huge land mass and a small population. The film also lays stress upon the British heritage of English-speaking Australians.

**How Birds Help Us** (1 reel)

Birds provide us with food, destroy harmful insects and rodents, eat weed seeds, and give us pleasure with their bright colors and happy songs. Youngsters will gain an appreciation of birds through this interesting, charming film.

**How Insects Help Us** (1 reel)

When Bill and Jack go fishing, they become aware of how insects help us: some destroy harmful insects, some provide food for fish and birds. Bees carry pollen and make honey, silkworms make silk, and many other insects are fascinating and beautiful to observe.

Each of these 16mm sound motion pictures is available in true, natural color or black-and-white.

FOR THE INTERMEDIATE GRADES

FOR THE PRIMARY GRADES

## DAVI in Washington

The NEA's Department of Audio-Visual Instruction held its 1957 convention at the Sheraton Park Hotel in Washington, D. C. March 3-6. Day-by-day themes included "Meeting Local Needs Thru Local Production," "Curriculum and Audio-Visual Education," and "Audio-Visual Information Services for Professional and Lay Publics." Major speakers were Lawrence G. Derthick, U. S. Commissioner of Education; L. C. Larson, retiring president of DAVI and Director, Audio-Visual Center, Indiana University; Floyd E. Brooker, DAVI Executive Secretary; Richard B. Hull, Director, Radio and Television Broadcasting, Ohio State University; and Stephen M. Corey, Dean, Teachers College, Columbia University. In addition to the general sessions and discussion and workshop sessions, there was a trade show of nearly 100 exhibits of the latest audio-visual equipment and materials. (For further comments on the DAVI meeting, see editorial, page 178.)

## DeKieffer Now President

Robert deKieffer, Director, Bureau of Audio-Visual Instruction, University of Colorado, Boulder, took office as president of the Department of Audio-Visual Instruction at the close of the Department's annual convention in Washington, D. C. Dr. deKieffer succeeded L. C. Larson, Director of the Audio-Visual Center, Indiana University, Bloomington.

More than 1500 DAVI members voted in an election by mail which preceded the convention. Elected, in addition to Dr. deKieffer, were: Charles F. Schuller, Director, Audio-Visual Center, Michigan State University, East Lansing, vice-president, and three delegates-at-large for three-year terms. They are: Walter S. Bell, Director, Audio-Visual Education, Board of Education, Atlanta, Ga.; Mendel Sherman, Audio-Visual Center, Indiana University, Bloomington; and Paul W. F. Witt, Professor of Education, Teachers College, Columbia University, New York, who was re-elected for another three-year term.

## AVDO's Spring Conference

The 8th Annual Spring Conference of the Audio-Visual Directors of Ohio (AVDO) is being held at Ohio State University in Columbus April 11-12. The theme is "Audio-Visuals in Curriculum Development." Speakers include Floyd E. Brooker, Executive Secretary, Department of Audio-Visual Instruction, NEA, and A. Wells Foshay, Director, Bureau of Educational Research, Ohio State University. Dr. Brooker will discuss, "Audio-Visuals: Education's Frontier." Dr. Foshay's subject is "The Relation Between Curriculum Development and AV Materials."

## The First Medical Motion Picture Workshop

The top men of the medical motion picture field — both in production and utilization — were the principal speakers for the First Medical Motion Picture Workshop. All Workshop sessions were held on the Calvin Company sound stages in Kansas City February 4, 5, and 6 — plus an impressive and interesting tour of the University of Kansas Medical Center on Thursday with a wealth of demonstrations of various audio-visual methods in use.

The speakers included: Mr. Ralph Creer, Director, Motion Picture and Medical Television, American Medical

At the first Medical Motion Picture Workshop, J. Edwin Foster, of the Medical Audio-Visual Institute of the Association of Medical Colleges, spoke on "Motion Pictures in Medical Education."

Association; Mr. C. Graham Eddy, Chief, Medical Illustration Division, Veterans Administration; Dr. J. Edwin Foster, Director, Audio-Visual Institute, Assn. of American Medical Colleges; Mr. Mervin W. La Rue, Sr., Producer; Miss Helaine S. Levin, Director, Film Library, American Dental Assn.; Dr. Joseph E. Markee, Department of Anatomy, Duke University School of Medicine; Dr. John L. Meyer, II, U.S. Public Health Service Hospital; Dr. David S. Ruhe, Head, Department of Audio-Visual Education, University of Kansas Medical Center; Mr. Warren Sturgis, Sturgis-Grant Productions Inc.; Mr. Sy Wexler, Churchill-Wexler Film Productions.

The men and women attending came from all parts of the country and represented various types of film interests. They included some eighty photographic department heads from as many Veteran Administration hospitals, a dozen representatives of the major pharmaceutical houses, faculty members of a dozen medical colleges, producers who specialize in the medical and public health field, staff men from the medical corps of the Armed Services, the American Medical Association, American Dental Association, the

# DU PONT INTRODUCES

## TONTINE<sup>®</sup> flame-resistant vinyl drapery material for darkening and decorating classrooms

Now you can specify an opaque drapery material that complements the décor of rooms used for audio-visual work. "Tontine" flame-resistant vinyl drapery material comes in a selection of attractive patterns and colors on its textured side (see diagram) and in neutral beige on the smooth side facing the window. Soft and pliable, drapes of this new fabric gracefully draw up into minimum space after use. And there's no "boardiness" in low temperatures, or "tackiness" in high.

### EXCELLENT SERVICE ADVANTAGES

Although Du Pont "Tontine" is of a weight and softness designed to drape gracefully over large expanses, it withstands rough handling and possesses balanced resistance to deterioration, discoloration, shrinking and stretching. Its flame-resistant characteristic is equal

to that of "Tontine" triplex window shade cloth, which has passed every governmental test it has undergone. For free samples and specifications, mail coupon below.

Cross section of "Tontine" drapery material

*Base fabric is high-grade cotton, coated with virgin vinyl resins formulated to impart permanent flame resistance. Black pigmented vinyl gives opacity. Vinyl coat on one side has embossed textile design.*

**Du Pont TONTINE<sup>®</sup>**

*Flame-Resistant Vinyl Drapery Material*

BETTER THINGS FOR BETTER LIVING ... THROUGH CHEMISTRY

### Typewriting via TV

Typewriting can be taught more effectively by television than by an instructor in the classroom, according to results of a study by the Bureau of

Business Research at Michigan State University.

The experiment was conducted by William R. Pasewark, now at Texas Technological College, while he was an instructor in business education at M.S.U.

He found that television-taught students, with no instructor in the room, not only learned to type faster but also made fewer errors than students taught by the conventional classroom method.

"Contrary to some opinion, the absence of an instructor may have contributed to this superiority of tele-students for they may have assumed

more personal responsibility for their learning," Pasewark reported.

The novelty of learning through television may also have motivated the experimental action beyond normal expectation, he said.

Two groups of 22 students each were used in the experiment. They were matched almost identically for intelligence and were given the same course, by the same instructor, in half-hour periods, five days a week for 48 days.

One group was taught in the classroom. The other students were arranged into groups of three and four and were instructed only by open circuit telecasts from Michigan State University station WKAR-TV.

Students instructed by television typed faster on all nine timed-tests during the course, Pasewark said. The experimental group on the final test averaged 35.4 words a minute and 4.5 errors per student while the conventional group averaged only 29.3 words per minute and made an average of 5.9 errors per student.

Although Dr. David Luck, head of the Bureau of Business Research, believes conclusions concerning TV-teaching of other subjects should not be drawn too hastily, he said the distinct success of the experiment should spur increased research into further educational uses of television.

"... as spectacularly far-reaching as American history itself . . ."

# THE PAGEANT OF AMERICA FILMSTRIPS

"For the first time schools are offered a coordinated series that ranges over the entire American history curriculum and forms a basic teaching library." MRS. VERA M. FALCONER, in AUDIO-VISUAL INSTRUCTION, February 1957.

Now, in one comprehensive series of 30 authentic documentary filmstrips and Teacher's Guides, eminent historians, educators and visual specialists have created a brilliant, smoothly flowing filmstrip presentation of the growth and development of the United States in all of its important aspects, including the Nation's economic, social and cultural progress. You will agree that to use this flexible supplementary aid in American history, and many other studies, is a most stimulating and rewarding experience. Your pupils will be fascinated by the pictures.

### New Home for Holmes

Frank Holmes Laboratories, Inc. have moved into their new color film plant in San Fernando, California. The plant will afford expanded facilities and the latest equipment in film testing, optical printing, and continuous motion picture processing equipment. A complete machine shop in which the firm's specialized equipment is manufactured and a fireproof vault for storage of customer's originals are parts of the new plant.

### People & Jobs

MARGARET CROSS has been appointed film officer for the midwest area of British Information Services. She succeeds Mrs. L. JOHNSTON LEARY, who has retired to devote full time to her job as a housewife. Mrs. Cross came from England to the Chicago office a year ago. Until her present appointment she served as secretary to Sir Stafford Barff, midwest BIS director, and to Mr. Frank Mitchell, who succeeded Lord Barff when he was transferred to a post in India.

WILLIAM M. WELBORN has joined the Film Council of America as a member of the "Rushes" editorial staff and assistant director of the American Film Assembly.

New audio system in  
Bell & Howell  
magnetic recording projector

## New FILMOSOUND 302-E has 50% more output— high fidelity response—at no increase in price!

Bell & Howell pioneered low-cost sound movies through magnetic recording on film with the Filmosound projector. Now the new 302-E (Bell & Howell's third magnetic model) introduces still more improvements that add the thrill of hi-fi sound to your 16mm films.

Its powerful 15-watt amplifier has 50% more output. The wide-range frequency response — like an expensive high fidelity instrument — will reproduce any sound in the audible range. Microphone sensitivity has been tripled. An additional "peak" indicator light and automatic switching of input circuits help to make recording even simpler.

The Filmosound 302-E not only enables you to create and enjoy top-quality sound movies — it also brings out the best in magnetic tracks previously recorded! And, of course, you get brilliant, sharp projection of either

optical or magnetic sound films. The 302-E is lighter in weight, easier to operate — all at *no increase in price!*

**\$100.00 trade-in bonus!** For a limited time, your old projector is worth *\$100.00 more* than its "Blue Book" value when you trade it in on a versatile, new Filmosound 302-E. And your Bell & Howell dealer will soundstripe up to 400 feet of your favorite 16mm film *absolutely free* — just to demonstrate 302-E performance.

See your dealer today! Or write Bell & Howell, 7117 McCormick Road, Chicago 45, Illinois.

50 YEARS OF FINER PRODUCTS THROUGH IMAGINATION

### ETV for Your Community

Steps involved in establishing and operating an educational television station are graphically outlined in a new booklet published by three national organizations involved in the development of ETV in this country.

Entitled "Educational Television for Your Community," the booklet details costs of establishing an educational station, offers case studies of present stations and indicates staff needs for ETV units.

The brochure was published jointly by the Educational Television and Radio Center, Ann Arbor, Mich.; the Joint Council on Educational Television, Washington, D. C., and the National Association of Educational Broadcasters, Champaign-Urbana, Illinois.

Programs now being seen on educational television are described and pictured in the new publication. It is pointed out that educational TV can provide training for adults, non-violent entertainment for children, programs which will satisfy adult leisure interests and citizenship programs.

The brochure also points out the use being made of TV to provide enrichment type programs and actual courses for viewing within schools.

A large part of the booklet is devoted to a discussion of the steps necessary to activation of one of 258 TV channels reserved for educational television, from application for construction permit to actual operation of a station.

Copies of the booklet can be obtained by writing the Educational Television and Radio Center, Ann Arbor, Mich.

### U. S. Films Abroad

Arthur Larson, Director of the U. S. Information Agency, has reported that during 1956 the Agency almost doubled the total of countries abroad in which it produced foreign-language documentary films to tell America's story.

In 1955, Mr. Larson said, the Agency's Motion Picture Service utilized the services of native-born people in their homelands to produce documentary films in 22 countries. Comparably, in 1956, the Agency directed the production of similar films in 41 overseas countries.

"These locally produced motion pictures are particularly effective in that

they are directed to specific audiences, and tell their stories against a background completely familiar to those audiences," Mr. Larson said. "In these films the direct benefits of the U. S. foreign policy to a given country and its people are emphasized in relation to their own self-interest and national aspirations."

In addition to the films produced by the Information Agency, 44 films made by American companies for use in the United States were acquired by the Agency during 1956 for translation and distribution in the overseas information program.

One of the highlights of the Agency's film activities during the year was the production of films that carried to the world the heroic and tragic story of the Hungarian people's revolt. *Hungarian Fight for Freedom*, a film produced from the earliest motion pictures of the strife in Hungary, was quickly assembled into 27 languages and distributed in 81 countries by the Agency. Shortly thereafter, *Our Times*, the Agency's monthly news review on film, devoted an entire issue to the Hungarian story. This was distributed in 32 languages to 81 countries. A third picture, *A Nation in Torment*, showing how the revolt was ruthlessly suppressed, is being readied for early 1957 release, as are two films about Hungarian refugees.

### Archives Request That Came Too Late

In line with an official resolution by the National Audio-Visual Association urging support for the audio-visual archives project sponsored by the National Education Association's Department of Audio-Visual Education, Don White, NAVA Executive Vice-President, wrote to Mrs. C. R. Reagan suggesting that her late husband's files would be of major interest to historians of the AV field. Mrs. Reagan's response to Wm. F. Kruse, archivist of the project, was that the request had unfortunately come too late. The files had been destroyed.

The loss of the Reagan papers can never be made up. This loss, like those suffered in the destruction of the files of other giants of our field—Thomas E. Finnegan, William H. Dudley, George Kleinc among them—can only be minimized by vigorous cooperation on the part of the whole field to prevent similar losses.

Everyone who knows such a veteran should make it his personal responsibility to help preserve this source material. Correspondence concerning possible accessions should be conducted with Wm. F. Kruse, DAVI-NEA Archivist, 45 Ingleside Shore, Ingleside, Ill.

## 16mm needs **SPECIAL CARE** too!

**DU/ART** gives your 16mm negative **SPECIAL CARE** with:

#### RESEARCH IN 16mm PROCESSING . . .

Brought about the use of jet spray negative developing for faster—"bromide-drag-free" results.

#### CONSTANT LABORATORY SUPERVISION . . .

Hourly sensitometric tests to guarantee proper developing strengths...and constant chemical replenishing control assures proper processing for every foot of negative.

#### EFFICIENT LABORATORY ROUTINE . . .

Every roll of 16mm film receives constant detail attention—from gamma strip and picture tests to special processing instructions for your individual negative.

No matter how large or small the job, your 16mm negative receives **SPECIAL CARE** at **DU/ART**.

# New *Flexalum*® Audio-Visual blind keeps out 30 times more daylight!

Field tests just completed by a leading independent testing laboratory\* show that the new Flexalum Audio-Visual Blind keeps out 30 times more daylight than a fully-closed conventional blind. With the flick of a cord, it turned a sunny classroom into a dark auditorium—easily meeting the requirements of

the Illumination Engineers Society for *motion picture theaters!* (Even with an opaque-type projector, the image was reported "clear, sharp, with good color"). Here, at last, is the blind that meets your daily classroom needs for audio-visual instruction at a moment's notice.

\*Complete 20-page report of tests conducted by U.S. Testing Company sent on request. Write to: Hunter Douglas Aluminum Corp. Division of Bridgeport Brass Company, 405 Lexington Avenue, New York 17, N.Y. Dept. ES-4.

# Dissatisfaction

***"The decision to change is based upon dissatisfaction.  
This decision is not only the first  
but the most important single aspect  
of the change process."***

If I were challenged to pick out the most important words from DAVI's 1957 Washington Conference, here are the ones I'd choose: "The decision to change is based upon dissatisfaction."

Now I hope that Dr. Stephen M. Corey, Dean of Teachers College, will not think I have done an injustice to his thinking by thus quoting just a part of one of his sentences. But this small part was to me the very heart of his most significant keynote address. His handling of the topic, "Changing Professional Practices: The Process," reached deeply for fundamental principles. What could be more fundamental and significant for an audio-visual leader or administrator than consideration of just what it is that causes people to change.

Every day, and at every turn, the audio-visual leader is concerned with changing people. He's trying to convince a decision maker there must be an increased appropriation for audio-visual activities. He's trying to lead an instructional supervisor to change his attitude toward the use of audio-visual materials. He wants the educational and other leaders of the community to work together for an educational television station. In working with teachers he's trying to bring about change in the quantity and quality of their use of audio-visual materials. *What causes people to change?*

It was good once again to hear Dr. Corey addressing an audio-visual meeting. His unusual ability to single out really fundamental problems and, using understandable language, to discuss these problems in relation to sound principles of psychology, always results in a unique and highly valuable contribution. This time was no exception. Here was a really stimulating keynote.

The process of bringing about change is more than using persuasive words. It is more than just telling the story about audio-visual. It is more than just tell-

ing people of the importance of audio-visual materials to effective teaching. Getting support for an audio-visual program is also more than just getting people to respect and like the person who is responsible for the program. Changing people in favorable ways so that good audio-visual programs will develop is not a simple task.

"The decision to change is based upon dissatisfaction." Furthermore, "this decision is not only the first but the most important single aspect of the change process." In other words, then, if my superior is going to change the appropriation, and provide more audio-visual funds, he must become dissatisfied — as I am — with the amount now appropriated. It is my task to help the school principal to become dissatisfied with the facilities provided for using audio-visual materials in his school so that he will scream and insist upon change. It is my task to demonstrate to the people of a community how unfortunate they are not to have the advantages that educational television brings to the people of other communities. It is my task to help teachers become dissatisfied with the way they are teaching so they will change their methods and perhaps give greater attention and emphasis to the use of audio-visual materials in their teaching.

Dissatisfaction is but the first step in the change process. But it is an essential first step. Once there is dissatisfaction, there will be a readiness to change and to improve. It is at this point, then, that others will be most ready to be persuaded and convinced about audio-visual. First, dissatisfaction, then the presentation, followed by — we hope — conviction and change.

Thanks again, Dr. Corey, for your stimulating thoughts; and please don't wait so long between the times you speak to us.

*Paul C. Reed*

## How to use a classroom tool to win friends and influence parents

PTA again! But what a pleasant evening, with your story well told, well received.

To you it was another "regular" Kodascope Pageant Projector performance. Setting up and threading were easy. That reverse switch let you start with the *picture*—no distracting focus frames. Screen images were sparkling; sound, clear—with minimum projector noise to take attention away from the real show.

You had no worries about the projector being ready to go. You knew you could depend on the Pageant.

It was a pleasant and rewarding meeting.

Perhaps you've been missing out on the important benefits that *only* the Kodascope Pageant 16mm Sound Projector offers. If so, see a nearby Kodak Audio-Visual dealer. Let him give you the full story on:

1. **Simple setups** with folding reel arms, printed film path, single-switch reversing.
2. **Extra-bright pictures** from the Pageant's Super-40 Shutter. (It puts 40% more light on the screen at sound speed than ordinary shutters.)
3. **Clear, true, comfortable sound**—With a Pageant you get a *sound* system—tone and volume controls, baffled speaker, fidelity adjusting lever.
4. **No more worries** over breakdown or maintenance due to improper oiling. Pageants are permanently lubricated at the factory. And you have a choice of three different models, one exactly suited to your showing requirements. *Let a dealer demonstrate. Or write for literature giving full details. No obligation either way.*

**PAGEANT**

**EASTMAN KODAK COMPANY • Dept. 8-V, Rochester 4, N. Y.**

4-111

Please send me complete information on the new Kodascope PAGEANT 16mm Sound Projectors, and tell me who can give me a demonstration. I understand I am under no obligation.

# Here is a helpful guide to HOW

The wonder — and dismay — of hearing one's own voice as others hear it can help a child improve his speech habits.

Fieldtrip sounds can be preserved on tape for classroom discussion later. Recorded sounds (and pictures) make it possible to relive fieldtrips.

**T**ODAY there are undoubtedly few school teachers who have not heard of the tape recorder as a teaching aid. Many have had experience in actually operating a recorder, either at home or in the schoolroom itself.

But how many of these — not to mention those who have never seen a recorder demonstrated — are aware of its wide range of possible uses as a “teacher’s helper”?

The answer probably is “too few.” Nor is the answer today far different than it was several years ago when Gwen White Geer reported on the status of audio education in American elementary and secondary schools (summarized in *AUDIO-VISUAL GUIDE*, December 1953).

At that time, Miss Geer discovered that “Education of prospective teachers for audio-visual competencies was not satisfactory,” and that audio education in particular “has been neglected in the study of instructional materials” for teachers.

“Techniques for selection, preparation, utilization, and evaluation have not become a part of teacher or director preparation,” she concluded.

And the situation today remains about the same, not only for the teacher whose audio-visual education was needlessly neglected and who now finds a tape recorder available for her use, but also for the teacher whose college training was completed before audio-visual aids appeared and who also finds that she has access to a tape recorder.

*How to use* is the question. At present, it would seem that short-term education in the use of the tape recorder is most practical — at least until long-term, as well as in-service, training programs are more widespread.

One of the pioneer efforts along these lines is a 58-page booklet, “The Tape Recorder in the Elementary Classroom: A Handbook of Tested Uses” (available from the publisher at 25c a copy).\*

This book is especially designed to meet the “what-to-do-and-how-to-do-it”

\*Educational Division, Minnesota Mining & Manufacturing Company, St. Paul 6, Minn.

# TO USE THE TAPE RECORDER

problems of grade-school teachers who have had neither formal nor extensive training in the classroom possibilities of the tape recorder.

In language for the beginner, it suggests more than three dozen tested uses for the recorder as an elementary teaching aid. These are classified by subject—for example, "Reading (Voice Discussion and Analysis, Reading Readiness, Reading Development, Parent Conferences, etc.)," "Creative Dramatics (Recording Skits and Playlets, Puppet Plays, Establishing a Dramatic Workshop, Class Play Try-Outs, Pantomime, etc.)." A sample "use" reads:

*Introducing New Songs.* Teachers who find it difficult to introduce new songs can be helped by having a music supervisor make a tape recording. This can be played until the song is learned. At first the children listen and later they sing with the recording. Finally they have the pleasure of making their own recording of the song.

In a section on "Audio-Visual Tips," suggestions are given for coordinating silent films, slides, and filmstrips with a running commentary on tape.

The "General Information" section takes up such pertinent matters to the school use of tape recorders as "Tape Recording Libraries" and "Tape Recorder Clubs."

Say the editors in their preface: "Although there has been an abundance of articles in educational periodicals covering many uses of the tape recorder in the elementary school classroom, this is the first time these uses have been systematically catalogued and presented as a whole."

The booklet makes the point that the tape recorder is not a substitute for the teacher, but that tape recording can be to the student's ears what blackboards have been to his eyes.

Many candid photo illustrations in the book show teachers, children, and parents engaged in the processes described.

**Recording "oldtimers" brings local history to life. Those who can't visit the classroom can still be brought into the classroom.**

# LWV TAKES TO TAPE

by HAZEL HANSON

IT WAS DUTY rather than inspiration that brought members of the radio committee together one warm, humid evening to set up a schedule of programs to begin in October. Even high-minded personnel of a League of Women Voters' committee wilts under the vagaries of Illinois weather. But who can determine when or where the seed of an idea may germinate and grow. It was on that evening a plan came to birth. The idea was not original, but old and tried. However, it was new to our experience in broadcasting and the committee played with the idea enthusiastically as with a bright, exciting toy. Plans for a serialized educational soap-box opera grew and flourished. "At Home With the Herricks" took shape and form.

Voter education has been the responsibility of the League of Women Voters for over thirty-five years. In its quest to enlighten people to the obligations of self-government, the League reaches out to use every possible channel of communication. Radio, of course, is a powerful instrument for public enlightenment and Leagues everywhere attempt to make full and effective use of broadcast time. Committees pour their resources into programming.

Once a week for three years, the local radio station had allowed free time, and Leaguers here had produced an assorted variety of live informational programs. There had been no special continuity or format. Speakers and panelists had been presented, interviews held, skits dramatized. However, the programs failed to capture "the eager ears of a listening community." We talked to ourselves or the three hundred members of the local league. The broadcasts did not help to widen the political vision of the woman next

door or her neighbor across the street. In their desire to escape the tedium of household routines, these ladies remained tuned for entertainment. So the committee pondered entertainment techniques, and it was decided that for laywoman appeal we'd apply sugar-coating to our informational material. Educational soap-box was a fresh venture. We admitted to lack of professional know-how, but not to courage. Here was a challenge to develop new skills.

Our need was a tape recorder. We felt entertainment qualities would be improved with the dramatic voice balance of both sexes. At 10:15 in the morning there is a scarcity of men. Husbands are off on practical pursuits. It is only after work hours that designing wives can activate their other talents. Theme music and sound effects are difficult and nigh impossible for amateurs to introduce and accomplish without full cooperation at the studio. Recording at home allows time without pressures to devise, rehearse, and perfect these extras.

In support of the program, the Board voted appropriations for the recorder, and the committee set about to learn how to capitalize on this electronic genius whose capacity to reproduce is fantastic. We learned by doing. Before the season of broadcasting terminated, "At Home With the Herricks" had beamed forth simply and light-heartedly with lessons in government, information on issues, and persuasive appeals for responsible citizenship.

The recorder took up residence at the home of the chairman. Her home became the Recording Center, and the recorder, the conversation piece. For weeks everyone who called wanted the new machine explained and their voice recorded. With no encouragement the head of the house naturally and possessively took over the role of technician or engineer. He visited and had consultations with the engineers at the broadcasting station. He tuned and tested. He edited and spliced. As our

young son played the part of Bob Herrick, the radio assignment developed into an absorbing family project, and one from which we all profited immeasurably.

Many prominent and busy persons participated, and this helped to publicize and establish the broadcast as a community undertaking. The Village Manager, the Director of Finance, the Superintendent of Parks, the Director of the Community Welfare Council, candidates for the Illinois Assembly, the Director of Playgrounds and Recreation, the seventh-graders in one of our schools, the Camp Fire Girls, the Cub Scouts, the Girl Scouts—all cooperated with fine spirit. One reaction has been typical of all persons, great and small, who have taken part. All have been vitally interested to hear themselves on tape. We'll remember one little girl who giggled self-consciously as she listened.

The night we acted as hosts to the four candidates to Congress was perhaps the highlight of many interesting evenings. That tape was used by three radio stations in this congressional district. It was also listened to in a radio workshop at the national convention of the League of Women Voters. The recorder travelled with the delegates to that Convention. Later in reports to the membership, it offered some excellent recording of interviews with convention "Vips."

Our tapes have been used by other Leagues in the state. One was sent as an entry in a national contest to receive, not a money prize, but an honorable mention. The tapes have been played before clubs and other organizations. Community leaders have found them helpful in stimulating discussions. After a broadcast on a school bond issue a call was received from a church group. The tape with the recorder was brought to the meeting.

The recorder is used also outside the area of radio. When Frayn Utley spoke before a League meeting, her splendid talk was recorded and can

---

*Mrs. Hanson is a past president of the Oak Park-River Forest (Illinois) League of Women Voters and is now chairman of the League's radio committee.*

**They used to do it this way**

now be heard by those who could not attend. One Leaguer, a member of the Municipal Zoning Board, has built an excellent program on local conservation, using slides and a projector with the narration on tape.

Scripts are read in taping most of the programs, but not all. One excellent program with fifteen-year-old Susan Herrick at her church youth group meeting was spontaneous and unrehearsed. The young people explored the problems of delinquency and community resources for youth.

Beyond the boundaries of League membership, "At Home With the Herricks" caught the imagination of many listeners. The four Herricks have been talked about as if they were flesh-and-blood personalities. Their viewpoints on world trade, civil liberties, and constitutional revision have been quoted and mulled over. The program created interest and good will. Our fan mail was never a burden, however. The greatest response came after the Thanksgiving program when relaxed around the fire, the Herricks voiced their reasons for gratitude. Jim said, "Remembering all the comforts of our daily living, I want to tuck in some appreciation for the men and women who have helped to make this earth a treasure house of countless good things. I am grateful to all the workers, the builders, the inventors in the world." The script writer must have had the tape recorder in mind.

Above you see the cast of one of the Oak Park-River Forest League's radio programs broadcasting live over a local station. It was difficult getting the cast together for the morning broadcast — especially the men. Today the League tapes its radio programs at the home of the radio chairman — as shown in the picture below. Recording at home during evening hours allows time without pressures to devise, rehearse, and perfect the programs.

**Now they do it this way**

**"I can't see how you can run a modern school without an intercommunication system."**

**. . . says ROBERT L. GREGORY**

# INTERCOM AT WORK

Constant voice contact between teachers and students and the central office is maintained through a sound system such as is installed in St. Bernard's School in Madison, Wisconsin.

G. L. Ritter, principal of Mitchell Junior High School, Racine, Wisconsin, tapes an educational radio program on the school's studio-type tape recorder for later transmission to selected classrooms over the console intercom system at left.

**O**BVIOUSLY there's no more logical place to teach and learn the uses of new teaching equipment than in our schools. But in most instances, the schools have to learn of the need first.

This is well illustrated by the case of the Theodore Roosevelt elementary school (kindergarten and grades one to six) in Racine, Wisconsin. The equipment: a sound intercommunication system.

As a result of his experiences in the military service, Robert L. Gregory was convinced of the necessity of an intercommunication system in every school. Gregory had served for two years as infantry instructor at Fort Benning, Georgia, helping to produce some 40 training films during that time. He also instructed instructors in how to use them.

"As a teacher in the Racine school system I had seen the value of audiovisual equipment in education before I went into service," recalled Gregory, who emerged from the infantry as a full colonel to become principal of Roosevelt. "I was thoroughly sold on it when I came out.

"I can't see how you can run a modern school without an intercommunication system. The object is not to replace the teachers but to help them; to enrich the educational offerings to the children; to do a better job in the same period of time."

Although Racine's school system is progressive, the board, lacking the advantages of Gregory's wartime experiences, was unwilling to expend money on an intercommunication system for Roosevelt until it had reasonable proof of the need for it.

Fortunately for Gregory, Roosevelt has an active PTA. When it learned what he wanted, it held two three-day carnivals in successive years which raised in excess of \$3,000. That was enough to install a sound-system console specifically designed for use in schools. There was enough left over for Roosevelt to acquire a tape recorder.

"In this way we pioneered the use of sound systems in schools here," reflected Gregory. "Since then they've been put in all the schools in Racine."

Roosevelt is well equipped with

Robert L. Gregory, principal of the Theodore Roosevelt elementary school in Racine, Wisconsin, broadcasts a message to teachers and students via the school's console sound system. Chimes and the tape recorder (at left) as well as the radio and record player built into the console are important parts of the school's audio-visual equipment. (All photos courtesy Webster Electric Co.)

audio-visual aids to help its 18 teachers educate its 585 students. In addition to the tape recorder, it has eight record players, two 16mm and two 35mm motion picture projectors, an opaque projector and a slide projector.

"All the equipment gets good use," Gregory observed. "But we still do not have enough. All our equipment, especially the school console intercommunication system which connects all 18 rooms, the gym, the multi-purpose room and my office, and the tape recorder work hand in hand with teaching.

"We found the sound system to be a tremendous aid in administration. We immediately removed our old buzzer system. The buzzer system and a telephone system connecting every room are obsolete. As a paging system it has 1,001 uses and is extremely efficient," Gregory continued.

"For one thing, we've eliminated the use of messengers. The saving in time there alone is enormous. Still we do not have 'snoopervision' since the principal cannot eavesdrop on what is going on in any room without the consent of the teacher and class. A simple on-off

*(Continued on page 202)*

School console sound systems such as this one installed in the Perris Union High School, Perris, California, are simple enough to operate so that students can use them.

# THE PARKHURST RECORDS

## Window to the Child's Mind

---

*Perhaps there are some who do not know the Helen Parkhurst recordings. If so, read on! If you do know the recordings, then refresh your memory and gain new insight into the child's mind and Miss Parkhurst's talent. The following account is reprinted from a handbook to accompany the recordings, titled "A Window to the Child's Mind." Information about both the handbook and the recordings may be secured from Alpark Educational Records, 40 E. 88th St., New York 28, N. Y.*

---

WHILE Helen Parkhurst was carrying on her conversation with children in the radio program "The Child's World," she generously made available some of her recordings for experimental use. In graduate classes and seminars in "Child Development and Elementary Education" at the Department of Education, Yale University, and to some extent with parent groups, I have used these recordings in a variety of ways. Some of these are noted here as suggestive for the wider audience which, fortunately, is now to have access to the records.

My students were, for the most part, experienced teachers of children, school supervisors or administrators, college teachers of child development or elementary education in liberal arts colleges and teachers' colleges, or those who were preparing for such positions. A few were Divinity School students. Many qualified as parents as well as professional workers.

Since everyone who shares responsibility for the guidance of children, whether in home, school, church, or community group activities, needs the fullest possible understanding of children, all my students were concerned with problems of how children grow, develop, learn; how they are alike and

---

*Dr. Gambrill was formerly head of the Department of Elementary Education at Yale University.*

how they vary at the same and at different ages; how they think and feel about themselves, and their experiences with things and people, both other children and adults; how they respond to various kinds of emotional atmosphere and to different kinds of treatment, and the like. For the study of these problems we utilized direct observation of individual children over a period of time, observations of groups under varying conditions, the research of specialists in the field, and the experience of the group itself. When all is said and done, the exact knowledge in this field is both incomplete and piecemeal. Especially as to how children think and feel about many of their experiences, what their inner world is like, there is little help available through the usual channels of study. We welcomed the Parkhurst records, therefore, both for their content and for their methods, as a new and fruitful approach to some of these problems.

In using the records it was important to clarify for listeners the purpose and the conditions under which the recording was done. Always, Miss Parkhurst was seeking insight into the thinking and feeling of the children about some specific experience: lying, stealing, conscience, prayer, creative activities, learning at home and at school, anger, mischief, criticism, discipline, and the like. The questioning could never be exhaustive; the program on the air allowed only about twenty-eight minutes for discussion. Furthermore, too great pressure on the children could drive underground the very responses sought; spontaneity was essential.

The children did not know in advance what topic they were to discuss. This was an important item of information for listeners, essential for valid interpretation of what they were to hear. Fortunately I had observed Miss Parkhurst and the children in one of the discussions, "Conscience," from start to finish, and could give personal

reassurance on this and other points involved in the recorded discussions. The ages and other facts about the children participating in a given discussion were important for listeners.

Two further conditions of major importance in determining the way children responded to the questions were pointed out. The most crucial of these was the friendly, permissive, yet objective attitude of Miss Parkhurst toward whatever the children offered. Clarity of meaning was sought but no moral judgment was indicated by word or tone or expression of the discussion leader. Her purpose was to *find out*, not to admonish.

Another important condition was the absence of people in the room other than the immediate participants. Although the children knew they were going on the air, they seemed uninhibited by these distant listeners. Their utter frankness about their innermost thoughts and feelings almost certainly would not have occurred with an audience present in the flesh. Frankness was probably furthered also by the tempo dictated by the time limit, which demanded such concentration on the questions raised that any concern about what the distant radio listeners might think was crowded out of consciousness.

Records were never used haphazardly. I used them only as they related to the class work in progress. They were chosen for presentation as they fitted into topics under discussion and were related to, but supplemented by, observation and research reports. In addition to the kind of orientation described above, careful preparation of students for listening was made before a record or a series of records was played. The specific character of the preparation varied with the instructor's purpose in using it at that particular time. So my own purpose had to be clearly defined to direct students' attention to the focal questions raised, and the children's thinking and feeling as revealed by their responses; to the leader's techniques as they affected children's responses, and the like.

Sometimes a record or a series of records was used as a springboard for discussion to be followed by further study and observation. Sometimes the record was most effective as a culmination following the use of data from other sources. Sometimes records were introduced as specific questions arose relevant to the larger problem under discussion. The choice depended upon the over-all teaching plan. Always the question was, "At what particular point will the reproduction of the children's own words and the inflection of their voices bring the topic most alive?" as they discuss "How We Learn," or "Creating With One's Hands," or

"Prejudice," or "Criticism," or "Conscience."

Because children were speaking about questions which concerned them, their words were a challenge to mature students to question; aroused their impulse for further study, observation, research, on their own part.

Following listening, discussion was of major importance in the use of the records. When students came to the listening period with hypotheses as to what questions might be raised and how children were likely to respond, comparison of what actually happened aroused the keenest interest. They never failed to note moments of rare insight on the part of individual children; insight into their own behavior, or of adult feeling and behavior. Sometimes a child's vivid comment of how he felt as he shaped clay, or as he "argued" with his conscience, gave a swift glimpse into the child's world that no scientific treatise could rival.

Questions were always raised about the children's fluency and their vocabulary. Differences in ways of thinking about questions under discussion were noted with their implications for variations in cultural background. The discussion leader's technique was a matter of major interest: the skill revealed in holding to the question under discussion, without loss of spontaneity; in maintaining a friendly attitude without loss of objectivity; in trying to help children clarify their meaning without putting words into their mouths; in giving each child a chance to talk without over-running the time limit. The question of the value of permissiveness as a teaching technique, a guidance technique, a research approach frequently arose for discussion. There was comment, too, on children's relationships to each other in the atmosphere created by the leader's attitude. While children do at times parrot each other's responses, more typically they agree or disagree thoughtfully and courteously, and explain why. There was frequent comment on how much the children were learning from each other as the discussion proceeded.

The outcome of using the Parkhurst records in graduate courses cannot be completely isolated from the use of other materials in a total teaching program. But, this approach does offer unusual challenge and has a unique value of its own. It opens up a new field of research and stimulates individual exploration both in the classroom and in the laboratory. This, in addition to the direct contributions it offers to parents and teachers in understanding the children's inner world of thought and feeling.

## Quotations from the recordings

### From "Creating with One's Hands"

Parkhurst: "What is the difference between the kind of a feeling that you have in your *head* and the kind of feeling that you have in your *hands*?"

Stephanie: "Well — in your *head*, you're *thinking about it*."

Parkhurst: "Well, do your hands have any feeling besides being — sticky or wet or —?"

Stephanie: "Well, they're —. They get very *excited*. And they keep going, and have a lot of *power* in them. Energy from your head."

### From "How We Like to Learn"

Parkhurst: "Would you like a *strict teacher*, or would you like a teacher who *isn't strict*? Or *what kind* of a teacher would you like, Loren?"

Loren: "Well, in a way the *strict teacher* would be *better*, because if you have one that's *easy* — you would never learn to be good."

Peter: "I think the strict teacher is good in *some ways*, like in teaching you work; I mean she'll *drill the work into you*. But you won't *enjoy doing* the work. And it *won't stay with you*!"

### From "The New Baby — and Sex"

Parkhurst: "And if you had a hard time asking your parents, you probably are not going to ask somebody else, are you? So what do you think is the best thing to do, Reid?"

Reid: "Well, I think you should *ask* your parents about it. I think almost everybody here wants to do it — wants to know about it — but, they just haven't asked their parents right out. I think if we did that, the parents would answer."

Parkhurst: "Don't you think the parents might welcome the opportunity to tell you and say, 'Well now, he's old enough to know?'"

Reid: "Yes . . . I want to get back to the question — I'm waiting for him (my child) to ask me, and I'm waiting for her (my mother) to tell me."

Parkhurst: "And so?"

Reid: "And so, nothing happens."

Parkhurst: "And in order to have something happen?"

Reid: "Somebody has got to go first."

Parkhurst: "And who's going to go first?"

Patsy: "I think it ought to be the parents."

Parkhurst: "If you are curious about other things, you usually satisfy your curiosity."

Siegrun: "How would the parents know that we wanted to ask them?"

Reid: "We've got to *ask*!"

Siegrun: "Well, if we didn't tell them that we wanted to *ask them*, how could they tell us if they didn't especially want to tell us? And if they didn't know we wanted to know?"

### From "Criticism"

Parkhurst: "Do you think that sometimes children are a little impatient? And they say things that perhaps they don't mean?"

Anne: "Yes, I do."

Parkhurst: "Well, what kind of times?"

Anne: "Well, sometimes when your mother says that you did something that you really didn't do — you get sort of mad and say something that you shouldn't."

Parkhurst: "Jeff?"

Jeff: "I think one fault that practically every single parent has is they don't like their children to talk back to them and say what they want to say."

Parkhurst: "Yes . . ."

Jeff: "If their mother says — well, 'Why didn't you do that?' And then she doesn't give you a chance to say anything, well, I think it's very unfair."

# TAPE EXCHANGE DIRECTORY

by RUTH Y. TERRY

The International Tape Exchange Program was launched by EDUCATIONAL SCREEN in October, 1954, with the help of Mrs. Ruth Y. Terry of Muskegon, Michigan. Its purpose is to promote and aid the exchange of tape recordings between school and church classes and groups in this country and other countries. Mrs. Terry reports that her own English classes have been enjoying exchanges with classes in Australia, Sweden, Japan, New Zealand and others.

EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE, with the help of Mrs. Terry, acts as a go-between by searching out and publishing names and addresses of interested persons in other countries. The classes and groups themselves should make final arrangements by correspondence.

Following is an up-to-date list compiled by Mrs. Terry giving names and addresses of schools and groups in other countries that have expressed interest in tape exchanges. Write directly to the person and address given to make arrangements for the tape exchange. Mrs. Terry will be glad to help in any way she can in setting up exchanges. She would like to hear from schools and other groups in the United States who are participating in the Tape Exchange Program. Write to Mrs. Ruth Y. Terry, 834 Ruddiman Ave., No. Muskegon, Michigan.

**Mrs. Terry reports on taping activities in Muskegon, Michigan . . .**

Mrs. Ruth Terry; Ron Zimmer, Muskegon Heights High School Senior; Agi Hemmer, German Exchange Student and a North Muskegon High School Senior; and Bob Beegle, Muskegon Community College Sophomore, are busily engaged above in the preparation of tapes of speeches on citizenship, which were sent to the United States Office of Information for approval. These tapes were an outgrowth of five assemblies, which had been presented in Muskegon Senior High School, Muskegon Heights High School, Western Michigan High School, Catholic Central High School, and Muskegon Community College with the aid of the Chamber of Commerce. The report from the

United States Office of Information stated congratulations on the taped programs and reported such tapes were very interesting and very valuable in enlightening other countries about the "American Way of Life." These tapes serve as a direct means of communication. Bob Beegle, a sophomore at Muskegon Community College, is shown above preparing his taped message to go to the U. S. Office of Information. Bob is a pre-medical student and is very enthusiastic about communication with faraway lands by means of tape recording. Bob also assists a blind student, who studies by tape recording from the tapes Bob makes for him.

James Graves, a tenth grader of Muskegon Senior High School, is telling about his school on a taped message that has now gone with Mr. Dan Premo, a local graduate student, to Bogota, Colombia. Mr. Premo plans to make contacts with schools in Colombia so some month we hope to publish the names of schools there which wish to send tapes in Spanish in exchange for tapes in English from this country. Part of our tape was done in Spanish by the Muskegon Heights High School. On another part I placed short versions of tapes from five different countries which I received recently.

Miss Agi Hemmer of Karlsruhe, Germany, an exchange student who is attending the North Muskegon High School, is sending tapes to Germany. Miss Hemmer is a senior in the local school and at the same time is completing her high school course in Germany. Since she is living with a family in my block, we have found it convenient to tape messages for her to keep her in touch with her school and her relatives. Agi is enthusiastic about the International Tape Exchange Program. Having been an exchange student last year in Sweden and next year in France, she feels her education in all four countries is much more complete as a result of such direct communication by tape recording.

(3) Don't forget to insure tapes for safer delivery. It may be necessary to send tapes parcel post to use international mail insurance.

(4) Don't send photographs, school handbooks, printed materials, or any other item in the package with the tape recording.

(5) Don't overlook asking in your correspondence if there are duties or customs fees on tapes coming from the United States.

Students in the department of English at Florida A&M University listen to a radio broadcast.

## HOW ABOUT RADIO?

by THEODORE B. COOPER

WITH the advent of television, many seem to feel that radio has only a very limited contribution to make in the field of mass media. Granted, television has provided many wonderful vistas and only the future can foretell what other wonderful things lie in store. However, radio has its own unique contributions to make in mass communication and in audio-visual education. These are some of the more outstanding of these unique contributions:

(1) There is a wider variety of programs available on radio which can be clearly received.

(2) Radio programs in many foreign countries can be received clearly.

(3) The higher development of the listening sense is possible.

(4) The higher development of mental imagery is possible.

(5) Radio makes possible the presentation of artists who have unusual talent, but who may be physically offensive to some.

Mr. Cooper is a professor of education at Florida Agricultural and Mechanical University, Tallahassee, Florida.

(6) Radio programs can be produced more economically.

(7) There are more radio sets in use than television sets.

(8) There are more trained personnel in radio than television.

(9) The general field of knowledge or "know-how" is presently more standardized in radio than in television.

(10) Radio reception is not generally as easily affected adversely as in the case of television.

If teachers feel there is a legitimate place for radio in education, these suggestions are pointed up for its improved utilization:

(1) The use of the radio in the classroom should grow out of the needs of the students.

(2) The teacher should be familiar enough with radio programs to select those best suited to student needs.

(3) The teacher should integrate the listening experience with the unit being taught.

(4) Students should be physiologically and psychologically ready for the listening experience.

(5) Students should be alerted as to what to listen for; then they will study the broadcast.

playing with him. The film ends with all the children having a good time.

## APPRAISAL

The technique of stripping the set of all background details and non-essentials focuses audience attention on the children, their problems, and their reactions. *Helping Johnny Remember* is a socio-drama which attempts to point out the necessity for courteous behavior if one expects to have fun playing with others. The fact that the children speak with a realistic dialogue and are of the primary grade level tends to improve the utilization possibilities of this film. By using a process of self-identification, children can readily see themselves in the same or similar situations and respond to the problems presented in the film. At times, the children are difficult to understand but the narrator clarifies their dialogue by summarizing the feelings of the group at various stages. *Helping Johnny Remember* should prove of interest to elementary teachers or student teachers concerned with the deviate behavior of the outsider and to classes on the primary level discussing how to get along together.

— O. E. Bissmeyer, Jr.

## HELPING JOHNNY REMEMBER TRAINING FOR CITIZENSHIP SERIES

(Portafilms, Orchard Lake, Michigan) 11 minutes, 16mm, sound, black and white or color, 1956. \$57.50 or \$100.00.

### DESCRIPTION

Second- and third-grade children act out a situation which dramatizes the problem of a boy rejected by the other children because he is selfish, uncooperative, and domineering and then accepted by them when he develops a real desire to be courteous and considerate.

Against a black background, devoid of all detail, a group of five children lays out a town complete with streets, houses, gas station, post office, and drug-store. The children are busily playing when the narrator calls attention to Johnny standing off alone in the blackness. Jack, Kathy, Susan, Bob, and Janet tell the narrator that they don't like to play with Johnny because he is rude, selfish, and won't take turns.

Johnny asks the question, "How can I be nice to them; they won't play with me?" The narrator suggests that Johnny join the group and try to be courteous and thoughtful. Susan gives a bad example of being courteous when she sticks out her tongue at Johnny and accuses him of not trying to be polite.

The narrator draws two pictures for Johnny. One he calls Smiley, the other Sulky. He asks Johnny with which one he would rather play and then tells him to look at his own face in the mirror. Johnny manages to smile and is invited to re-join the group.

This does not completely solve the problem, however, for Johnny soon forgets to remember to be courteous. The children leave the play area when Johnny returns to his former role. The narrator stresses the need for really wanting to cooperate and compares this

experience with the time Johnny first learned to tie his own shoes. Johnny admits that he had to practice over and over again before he could do it successfully.

Johnny wants to know how he can remember. Kathy answers this question by relating what was decided by her family whenever one of them was inconsiderate. They decided to signal the guilty person by touching a finger to the forehead. The children decide to adopt the same signal and begin playing again. Every time Johnny acts rudely, the signal is given until Johnny eventually makes the signal himself without being reminded. The narrator emphasizes that one must keep trying if other children are going to enjoy

*"Helping Johnny Remember" (Portafilms) dramatizes the problem of a boy rejected by the other children because he is selfish, uncooperative, and domineering and then finally accepted by them when he develops a real desire to be courteous and considerate.*

## WOOLLY, THE LAMB

(Coronet Films, Coronet Building, Chicago 1, Illinois) 11 minutes, 16mm, sound, black and white or color, 1956. \$55 or \$100. Teacher's Guide available.

### DESCRIPTION

This is the story of a small lonesome lamb and its quest for a playmate.

On a farm one special day in autumn Woolly, a little white lamb, is born. He is the only very little lamb in the flock. He soon grows lonely and starts out to explore the farm in search of a playmate. The film follows Woolly on his search. He runs along the fence for awhile before venturing on farther. He finds the cows lazily chewing their cuds in the meadow; he finds the pigs greedily eating in their pens; he finds the turkeys pecking and gobbling as usual, but he does not find a playmate. Finally he wanders into the yard near the farmhouse and discovers Tag, the farm dog, taking a nap.

Tag wakes up, sees Woolly and chases him back across the wide field to the sheep grazing in the pasture. How happy Woolly is to find that while he was away a new baby lamb has been born.

### APPRAISAL

This delightful story should appeal to young children. The farm animals will interest the children, especially the adventuring little lamb. It will catch and hold their attention to the end. Primary teachers should find this film helpful in motivating children to express themselves orally. Opportunity for vocabulary development is provided not only through listening, but also through the presentation of words overprinted on the screen in several places. Several related activities — retelling the story, dramatizing the story, children dictating the story while the teacher records it, making up similar stories, drawing pictures to illustrate the story — are suggested to teachers. For the above-average group of children, the film should provide an excellent opportunity for them to supply the narrative when the film is run without the sound. This film may be used profitably in the social studies and science areas of learning as well as in the language arts area.

— Evelyn Francis

## ROGER WILLIAMS:

### FOUNDER OF RHODE ISLAND

(Encyclopaedia Britannica Films, Inc., 1150 Wilmette Ave., Wilmette, Illinois) 28 minutes, 16mm, sound, b&w. 1956, \$150. Teacher's guide available.

#### DESCRIPTION

This film portrays the conflict between Roger Williams and the religious intolerance of the Massachusetts Bay Colony, showing how a group of those Puritans who came to the New World seeking freedom of worship refused to extend this freedom to those of different beliefs. The film shows how Williams arrived in Boston and was offered the post of Teacher in the Boston church. Williams explains that even though he had trained for the ministry at Cambridge he had refused to accept orders in the Church of England because of its similarity to the Roman Catholic Church. In Boston he finds that even though the Puritans left England to escape persecution at the hands of the Church, they are still associated with it. Williams does not feel he can accept a post in a church not completely separated from the Church of England.

Since his views bring him the displeasure of the Boston leaders, Williams leaves to find a place where his beliefs are acceptable. The film traces his moves, first to Salem, then to Plymouth Plantation, and back to Salem. Each community selects him as Teacher, but in both places the influence of Boston is so strong that he moves to keep from bringing the wrath of the large upon the smaller settlements.

It is during his second stay in Salem that Williams' teachings cause the leaders to bring him to trial before the General Court of the Bay Colony. Though he realizes the possible punishment, Williams refuses to recant; indeed, he uses the trial to present a full view of his beliefs to the leaders of the colony. These include such new ideas as: the charter from the King does not give the colonists the right to take lands from the Indians; civil government must be separate from the church; and an individual must be free to worship or not to worship as his conscience dictates.

For these new and dangerous teachings Williams is banished from the colony and seeks shelter among the Indians of Rhode Island where he determines to found a place "where no man need fear the whip, the prison, or banishment for conscience' sake, a place of freedom and liberty."

#### APPRAISAL

— Cleveland Film Festival

FILM ASSOCIATES  
OF CALIFORNIA

10521 SANTA MONICA BLVD. LOS ANGELES 25, CALIF.

segment of Colonial history with authentic settings and convincing acting. Most of the group thought that its greatest value would be in presenting the idea that though many came to the New World to escape religious persecution and to find freedom of worship, these groups did not extend this freedom to those whose views differed from theirs, and often indulged in the same persecution they had come to escape. The narration of the film is done by one of the trial judges, Governor Haynes of Massachusetts. This gives it a negative viewpoint. It was felt that an explanation of this fact may be necessary before showing the film to certain groups. Social studies classes from junior high through college should profit from the film and other groups interested in the history of the struggle for religious freedom will want to view it. The technical aspects of the film, photography and sound, are very good.

— Fred Williams

## VILLAGE OF SPAIN

(Churchill-Wexler, 801 North Seward St., Los Angeles 38, California) 21 minutes, 16mm, sound, color. \$190.

### DESCRIPTION

Mijas, a Spanish coastal village on the Mediterranean, is the setting for this social documentary film which pictures something of the traditions, religion, family life, and education which are the world of Juan José. It is narrated by the schoolmaster, as he explains and interprets the sights and sounds and relationships which are the familiar pattern of life to Juan José.

The film opens in a school room where Juan José and other young boys are listening to their schoolmaster describe the geography of Spain and the location of Mijas. Through the window, one sees that Mijas is an old village, though the Moorish fort on the hill is much older. Making a living is a full-time affair that concerns all of his family. One sees them cultivating the wheat that they will grind and bake into bread, just as they raise olives and most of the other foodstuffs which they eat. The family and other townspeople are shown earning extra money wherever they can by laboriously making paper and then fashioning paper sacks, plaiting ropes, weaving sandals, or by marketing surplus produce and cork. Most of the industry in Spain is handicrafts — there are few factories, and no heavy industry. The film graphically illustrates that the industrial revolution has touched Spain but little. Three-quarters of the people work the soil, still there is not enough food due to the lack of water and irrigation, and

because of the primitive farming methods.

The narrator states that Juan José comes from a family that eats better than most, and that his village is blessed with water. Life has its pleasant moments — dancing lessons in the plaza, football games using the bladder of a pig, and the visit of the Bishop.

One learns that most Spanish peasants travel very little. The viewer accompanies Juan on his first visit to a nearby town. On the way to the train station, he and his father pass the only car in their village. In the city, cars are more common and Juan realizes that there are people of wealth in Spain as well as common people who are used to simple living.

Family, faith, pleasantries, and work are the important bases of Spanish life. Nothing is quite so precious to a Spaniard as his family. The film closes with a visit to the interior of Juan's home and shows the cozy family group sitting down to their evening meal of raisins, dried figs, oranges, olives, and a hearty vegetable and meat soup.

### APPRAISAL

The film covers much material in an easy and smoothly flowing manner. It is well thought out, organized, and technically produced. The primary audience — intermediate and junior high school students — will probably find a personal identification with Juan José.

—Wayne Howell

## Scratches on Film

### Irritate Audiences

Scratches are havens for dirt, and refract light improperly. On the screen, they mar the picture and may distract attention. If on the sound track, they produce offensive crackling.

Fortunately, scratches can almost always be removed — without loss of light, density, color quality, sound quality, or sharpness.

# SOUND advice

about audio materials  
and equipment

by MAX U. BILDERSEE

## Recent Publications

TV, Tape Recorders, and Cameras have been the subjects of recent publications. Unfortunately, none of these several volumes has great potential for schools; we shall report on them nonetheless for your information.

*Pin Point TV Troubles in Ten Minutes* is described by the publisher (Educational Book Publishing Division of the Coyne Electrical School, Chicago 12, Illinois) as a practical, quick-answer, reference book on "TV Trouble Shooting" for servicemen. The book may be useful in technical classes and in technical schools but has little meaning from the standpoint of teachers and audio-visual specialists.

Unless you own or use a Canon camera, the volume *Canon Photography* (published by Camera Craft Publishing Company, 95 Minna Street, San Francisco 5, California) will be of minimum interest other than academic. This is a working manual of 35mm photography with the Canon V and IVS2 cameras.

Hastings House (New York 22) has published *How to Use a Tape Re-*

*recorder* by Dick Hodgson and H. Jay Bullen. The greatest emphasis, however, is placed on the tape recorder as a home instrument and business machine. Some of the applications proposed can be adapted to educational purposes and the AV specialist may wish to thumb through for ideas which can be used to vitalize education.

Highly technical, and therefore of interest to gadgeteers, is *Tape Recorders—How They Work* by Charles G. Westcott and published by Howard W. Sams and Company of Indianapolis 5, Indiana.

We cannot in good faith report any of these volumes as being essential to the audio-visual programs of the schools although each is interesting in the highly specialized areas it represents.

## Group Pick-ups

We've written several letters to tape recorder manufacturers recently and have asked them for help some of you have requested. We asked how better recording results might be achieved particularly in group pick-ups. Specifically, we asked sixteen manufacturers

this question: "Can you tell us how best to adapt school model tape recorders for group pick-ups and for use of low impedance microphones?"

We intend to give you a complete report on responses in the May issue of *EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE*. However, you may be interested in knowing that the Bell and Howell Company tells us, "We find that customers are satisfied by use of the following microphone mixer. It is the Knight Compact Mixer, Allied Radio Catalog No. 93 s 282, which lists for \$15 and is available at a net price of \$8.82. It would be necessary, if this particular mixer is used, to remove the present 75-MCIF connector and install TDC part No. 84-22 ring tip sleeve type plug. (Ed. note: This is easy to install.) This particular microphone mixer is desirable as no 110 volt 60 cycle AC source is required as with most mixers available on the market today.

"Additional microphones are available from us for the model 730 (No. 130-255) and for the 300 B microphone (No. 188-53). Each mike has its own gain control . . . and the customer is allowed to use the recorder speaker itself for monitoring during the record time."

The Revere Camera Company says, ". . . with regard to microphones, most high impedance microphones can be used with any of our tape recorders. The input requirements of all of our machines are approximately the same. These input requirements . . . state that the microphones will accept voltages from 500 micro-volts to 0.2 volts. This voltage range is wide enough that it accepts most every type of unit constructed.

FOR TEACHING & SELLING

USE SELECTROSLIDE!

Modern teaching methods, like modern selling methods, call for reliable working tools and SELECTROSLIDE gives trouble-free operation; brightest picture on the screen, and scores of other benefits.

From the JUNIOR to the STANDARD to the TWIN-SELECTROSLIDE nothing beats them, built with more than 32 years of experience, to out-perform and out-last all others.

SELECTROSLIDE is the "diamond" of fully-automatic-projectors . . . nothing finer . . . nothing more enduring . . . and there is a SELECTROSLIDE to fit your projection needs. Contact your local Audio-Visual Dealer for demonstration or rental of SELECTROSLIDE, or consult us.

In high schools, colleges and universities all over the U.S.A., Dage closed-circuit TV has demonstrated its ability to solve a staggering array of educational problems. Find out how Dage TV can help you. Write Dept. 74.

**DAGE**

DAGE TELEVISION DIVISION

Michigan City, Indiana

A Thompson Product

Outside North America, write C. D. Brandes, Inc., 4900 Euclid Avenue, Cleveland, Ohio.

"If you intend to use low impedance microphones with our recorders, a matching transformer should be obtained. These matching transformers can be purchased from radio supply houses such as Allied Radio in Chicago. They sell for approximately \$7.50. Low impedance microphones in general are not necessary unless the microphone cable length is greater than 25 feet. Even 50 feet will only decrease the level at the high frequency end a small amount."

This is only a beginning. We expect to have more answers for you next month and perhaps we can draw valid generalizations worthy of experiment from this sampling of fact.

### About Tape on Tape

Before we leave the tools for the materials, we want to call your attention to a "first" that is most interesting and appropriate. It is a sound recording, *All About Tape on Tape*, which discusses many factors of tape recording, and then demonstrates them so that you can hear them. There are many good ideas on the tape and in the profusely illustrated booklet which accompanies it. *All About Tape on Tape* is written by Jack Bayha, an audio engineer of considerable reputation, and narrated by radio and TV announcer Ed Condit; it is published by Tape Recording Magazine, Severna Park, Maryland. It can be used by the

"Dear Substitute: Here is my lesson plan for the day. Just flip the switch."

AV supervisor to demonstrate some points he discusses in in-service courses.

### Language Recordings

Zodiac Recording Company (501 Madison Avenue, New York 22) has produced an amusing record-booklet combination titled "Fun with French." It is of limited school value except for plain fun in the lower grades.

The same publisher has produced three more adult language recordings which can serve for individual study and for library purposes. These are "Spanish as You Hear It," "French as

You Hear It," and "Italian as You Hear It." All of these recordings are specifically and deliberately oriented to travel situations, offering word lists, numbers, days of the week, months of the year, time telling and other vocabulary aids. Situations involve travel, ordering meals, telephoning and such. In each instance a variety of voices, both male and female, are heard. Further, there is time allowed in the recordings for individual or class repetition of heard words and phrases. Enunciation and pronunciation are excellent throughout.

Each of these language recordings offers, on one side, a recording of "The Three Bears" and "Little Red Riding Hood" told in the foreign language at normal conversational speeds. The stories, of course, are simple, but the recordings offer excellent practice in language comprehension. High school classes and adult groups will find them amusing.

"Listen and Learn French" (see EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE, February, 1957) has been followed by "Listen and Learn Spanish" (published by Dover Records, 920 Broadway, New York). The "Listen and Learn" series may be useful in many classrooms and in library collections. These recordings too are deliberately oriented to travel situations and probably are most useful for individuals studying alone. In addition to the

### "HOW TO MAKE GOOD TAPE RECORDINGS"

A complete up-to-the-minute handbook. Clothbound \$2.50; paperbound \$1.50. Get a copy from your Audiotape Dealer, or send check or money order to Audio Devices, Inc., Dept. A

## "around the world in 96 minutes"

THE ARTIFICIAL EARTH SATELLITE which U. S. scientists plan to launch within the next two years will speed through space at 18,000 miles per hour, actually circling the earth once every 96 minutes.

The mission of the man-made "moon" is to gather scientific information. Radio impulses will carry data from the tiny sphere to earth, where they will be recorded on magnetic tape for later analysis.

The tape chosen for this unusual and significant recording assignment was Type EP Audiotape, the "extra-precision" instrumentation tape.

The same engineering skill, the same high standards of production, even the same superior magnetic oxides and base materials that go into EP tape are used throughout the Audiotape line. That's why informed recordists — professional and amateur alike — insist on Audiotape. For finest performance on *your* recorder, get Audiotape. It speaks for itself.

French and Spanish recordings, there are also "Listen and Learn German" and "Listen and Learn Italian," which are similarly worthy of school attention.

**Songs & Ballads**

Ballads, representing the emotional reactions of a people and a time, have always, in my opinion, been an instructional must. One cannot teach cold facts, mere information, common data and expect that students thereby will understand or even have the required information to understand the stresses and strains which have warped the course of man's development.

Through many centuries the Scotch were more clannish than they are today, and they were a warlike people. Even today there seems to be a different feeling, a different air as you cross the border from Northern England into Scotland. "Songs and Ballads of the Scottish Wars" (Folkways Records and Service Corp., 117 West 46th St., New York 36) represents the Scots people with honesty and vigor and is a worthy addition to both school library and private collections. Covering the period from 1290 to 1745 in ballads is no easy task, but this is adroitly and capably accomplished in this first professional recording by Maxwell John Dunbar. A few of the ballads presented are "Lord Randal," "The Battle of Otterbourne," "The Battle of Harlaw," and "The Bonnie Earl of Moray."

Of much greater interest to teachers and students are the "American Industrial Ballads" (Folkways, FH 5251) sung by Pete Seeger. The nature of some of the ballads and their sources are indicated by such titles as "Peg and Awl," "Eight Hour Day," "Hard Times in the Mill," "The Farmer Is the Man," "Come All You Hardy Miners," "Casey Jones," "Weave Room Blues," "Beans, Bacon and Gravy," "Seven Cent Cotton and Forty Cent Meat," "Pittsburgh Town" and "Sixty Per Cent." These titles need few footnotes, yet the information on the source of the ballads contained in the accompanying brochure is complete and useful.

Certainly the parallel developments, and disagreements, which have marked the growth of unionism and of the dignity of labor in this country cannot be taught against the background lacking this type of emotional exposition. Current history classes and current problems students will find this a valuable source of information and attitudes and a worthwhile contribution to the classroom.

Finally we would like to report on Folkway's "Folk Ballads of the English-Speaking World." The singing of Paul Clayton gives depth to the beauty of

these ballads, all of which are taken from *The Viking Book of Folk Ballads*. If you have ever wondered about the revived interest in and appreciation of balladry, here is an opportunity to compare the printed information as in the text with the vibrant delivery of the recording. Only recordings can truthfully recreate for many listeners the beauty of the ballad. This recording offers such well-known ballads as "The Derby Ram," "Botany Bay," "The Baffled Knight," and other lesser known ballads of great interest. Schools will find this recording a useful addition to library collections for pleasure listening and as a model for groups presenting ballads as well as for individuals seeking a ballad style to imitate.

### All-Around Program

In Raleigh, North Carolina, in addition to collections of recordings in the individual schools, there is a central collection which is available to all schools and which, in effect, gives all schools a valuable and varied collection available for use. The utilization of recordings in instruction is stimulated through many worthy devices.

One bulletin, used with teachers of the primary grades, is an excellent example of this all-around program as it is applied to the field of literature. The bulletin says, in part, "All children

need to hear stories read aloud to them. For primary grade pupils it is especially important. The hearing of stories together provides a commonality of experience that assures that each child has familiarity with certain 'touchstones' of literature. The National Council of Teachers of English prepared a list of folk and fairy tales which should be the heritage of every child and listed them in order of choice. All of these tales may be read and re-read to pupils in the first three grades. . . ."

Further in the bulletin, appropriately titled "Read Aloud—Primary Grades," is a list of these highly recommended stories accompanied by a list of the recordings which are available as well as the filmstrips which may be used in conjunction with the experience of listening in a group. A few of the recorded stories available to teachers in the Raleigh schools are: "The Three Bears" (Columbia JMJ 36), "Cinderella" (Lyric 408), "Gingerbread Man" (Columbia JMJ 37), "Three Billy Goats Gruff" (Capitol DC 123), "Lad Who Went to the North Wind" (RSA-Victor Y 356) and many, many others. Can you prepare a parallel list for your primary grade teachers?

This only the beginning of the audio education program in this fine southern community. There are radio programs intended for classroom instruction and

additional record-filmstrip coordinated programs for other grades. For instance, American legendary heroes are introduced at the fifth-grade level and here too books, filmstrips and phonograph records are listed together for the information of the classroom teacher.

### Barrymore & Shakespeare

If Shakespearian drama is your interest, we would like to inform you concerning four new recordings in the field. These are all issued under the Audio Rarities label and are "John Barrymore in Macbeth" (No. LPA 2202), "John Barrymore in Hamlet" (No. LPA 2201), "John Barrymore in Twelfth Night" (No. LPA 2204) and "John Barrymore in Richard III" (LPA 2203). These are re-recordings from radio programs in which Mr. Barrymore appeared. These are each tailored to broadcast presentation and are compressed into hour-long presentations. Mr. Barrymore was a masterful performer but these discs, originally recorded many years ago as they were, fail to demonstrate his superb delivery. They lack the tonal qualities which we have come to expect as usual in the recordings we hear. We prefer, from every standpoint for instructional purposes, Laurence Olivier's "Richard III" (RCA-Victor LM 6126), John Gielgud's "Hamlet" (RCA-Victor LM 6007), and Alec Guinness' "Macbeth" (RCA-Victor LM 6010).

## Canning the Commentary Is Not the Answer

Last fall Paul R. Kidd, Director of Religious Filmstrip Production for S.V.E., discussed briefly the pros and cons of the sound filmstrip observing:

"Many (church school teachers) feel inadequate for the teaching task. They prefer teaching materials that are pre-planned. . . . The presentation of a sound filmstrip that has been professionally pre-planned and put on a record seems to give a volunteer worker a greater sense of security in using it."

For this producer, this and several other considerations pointed clearly to filmstrips with "canned commentaries." Not so for the church educator. He knows the educational level of classroom utilization is primarily a coefficient of the teacher's educational competency. Built-in quality in a visual aid ought to show up in use, and it

often does, but no filmstrip can be made good enough to make up for educational know-how, insight, imagination, and all-around classroom skill.

Filmstrips with "canned commentaries" are much harder to use. They complicate the physical factors involved in utilization, long recognized as a prime hurdle. There are teachers who will do a first-rate job with a captioned filmstrip, or one with a printed script, who will fail miserably in coordinating all the physical factors involved in using a sound filmstrip.

It is to be hoped that the above producer and all others will develop acute powers of discrimination as to what format a given piece of material will be given. Let us not over-do the sound filmstrip, for canning the commentary is not the basic answer to teacher incompetency. That can only be cured by teacher training and by lifting the level of educational insight. All other measures are an illusion and a waste of time.

MM reflect personality-power or genuine cerebration under calm and objective conditions?

There is a constellation of relationships which need to be isolated, studied and evaluated if the churches are going to assign the right job to the right mass media. The four dominant factors are: the nature of the medium itself; the nature of the audience; the purpose of the communicator; and, the nature of the message. These are the general reference points for all decisions, and they will be good or bad, adequate or inadequate, to the degree that these factors are appreciated and understood as church leaders budget the MM-dollar and assign certain parts of the church's total job to the mass media.

## Some A-V Observations

by CALVIN DEVRIES\*

I do not consider myself enough of an expert in the audio-visual field to write a full-fledged article for EDUCATIONAL SCREEN but I will write on some of the questions raised recently.

## Not Sold on Sound Filmstrips

I have mixed reactions to the many filmstrips now produced with accompanying sound tracks on records. Without doubt—a really good sound track adds to the showing of a filmstrip and in my experience adult groups especially seem to prefer filmstrips with accompanying records. However, there are some things to consider on the other side of the matter.

Recordings are often mediocre, too often characterized by the customary electronic organ and an affected voice. Such recordings are a liability to any good filmstrip and the average church with the equipment and patience could do a better correlated recording

\*Associate Pastor, Fourth Presbyterian Church, Chicago 11, Illinois.

## Which of the Mass Media for Which Job?

How much of the money spent by the churches is going down the drain because the church has no adequate criteria for selecting one of the mass media (MM) to do a given job? Is TV hogging the MM-dollar? Has radio taken a back seat? Is TV, radio, and film expenditure in balance? In the run of a year the churches spend a lot of money on MM and now is a good time for the top leaders of the church to dig into this question. Put off for a decade, it ought not wait much longer.

What are the ground rules for the church to follow in the employment of the mass media in getting its basic jobs done? What broad principles are being followed in the allocation of the MM-dollar? Does the distribution of this dollar reflect administrative tac-

tics or executive strategy and long-range planning? Are the hucksters of Madison Avenue selling the church a phony bill of goods on the effectiveness of TV while the film folks fight for every cent they get?

Among other things, the church preaches, educates, and promotes its own and related causes. Which of these categorical jobs, by the very nature of these jobs and the nature of the various MM, should be assigned to which media—TV, radio, films, filmstrips, recordings, etc.? All along the line, from the local church to the top denominational executive, decisions are being made and money spent—on the basis, we ask, of what criteria, of what principles, of what findings, what reasoned conclusions? Do present decisions in the employment and financing of

on its own tape recorder. Beyond this, the teaching value of filmstrips lies partly in being able to stop with any given frame and discuss the issues it raises.

It is my impression that many groups tend to consider a filmstrip a program-type material rather than a teaching aid, and simply run through it as though it were a sound film. This is quite unfortunate and quite limits utilization potential of the filmstrip. I know there are institutional type phonographs available which can be stopped instantly and started in the same way without distortion of sound, but this has never seemed satisfactory when using an accompanying record.

The particular vocabulary level of a record also tends to limit utilization. This is even true of filmstrips that come with a double-faced record, one side for use with children and the other side for general use. I have sometimes found that the children's side is good for small children and the general side for youth and adults. But in such instances neither side seems quite the thing for use in the middle grades.

Another matter I have felt in use of records with filmstrips, on our rather extensive use of audio-visual aids in our Church School, is this: One of the advantages of filmstrips is the simplicity of storage and use, plus, of course, their relatively low purchase cost. It is possible to take a filmstrip and average slide-strip projector into a department or class, which has made advance arrangements, and simply leave it there knowing that one of several leaders in the department can operate the projector without any problem.

However, when a record is added it means either a larger piece of equip-

ment, or usually an extra piece of equipment. Making certain the record and filmstrip are precisely correlated in showing creates another problem. In a large program, where there will be persons with limited experience, it raises all kinds of specific problems, often minor in nature but capable of destroying much of the value of the audio-visual material. As many churches and institutions are now doing, we try to transfer the sound track from records to tape as soon as the unit arrives. This avoids the bane of records, scratchiness, and on the whole makes the operation of sound accompaniment to a filmstrip a little simpler.

### Likes Church History Series

We are finding the set of eight filmstrips, *History of the Christian Church*,<sup>1</sup> an excellent teaching aid in a unit on church history. The reading guide is brief, considering material covered, in each filmstrip. And for those who wish more information, each of the eight guides has excellent utilization suggestions, chronological tables giving many additional events and dates for the historical period covered. There is, also, a brief pronunciation table for difficult names.

The set begins with the book of Acts and continues through the formation of the World Council of Churches. We have found that the set has a comparatively wide utilization and have used it successfully with groups from Junior-age pupils (who are included in our study of Church history) through adults.

The comparable series of three filmstrips, *The Living Church*,<sup>2</sup> has a some-

what different utilization, at least so we feel. They have accompanying records and each strip constitutes about a twenty-five minute program. The strips with the records pack more drama, but do not impress us as having the same teaching value as those from the series *History of the Christian Church*. While *The Living Church* filmstrips are supposed to be used in sections, showing a sequence of only thirty frames from one strip seems to us to have disadvantages. The records cannot be used when this is done, and even the script must often be re-written in part. Furthermore, the continuity of the script is disrupted by using only a small section of frames from time to time.

**Creative Use of Slides**

Several years ago we purchased the SVE set of twenty Kodachrome slides consisting of reproductions of the great paintings of the Nativity and Christmas story. My wife and I did some research on each picture and finally developed a short and interpretive script. We then took our LP record collection of Christmas music, including Handel's "Messiah," Christmas carols and anthems done by the best choral groups in this country and Europe, and made a tape recording which correlated the script with the music. The end result was a forty-five minute Christmas program which is still somewhat a favorite around the church. This spring we plan to do the same with a group of twenty slides on the trial, death, and resurrection of Jesus Christ, for use during Lent.

**CONTEST WINNERS**

The Department of Administration and Stewardship of the National Council of Churches, at an Interdenominational meeting of Directors of Christian Education in Cincinnati on February 11, 1957, awarded prizes to the winners in a national contest for the best script for a filmstrip on "The Job of the Director." The three winners are: First Prize, \$100, Mrs. Ray O. Johnson, First Presbyterian Church, 26 Market Street, Iowa City, Iowa. Second Prize, Miss Hazel Wade, Peachtree Methodist Church, 3180 Peachtree Road, N.E., Atlanta, Georgia. Third Prize, Miss Louise McComb, Highland Park Presbyterian Church, 3821 University Blvd., Dallas 5, Texas. The judges for the contest were: Miss Mary Huey, Pasadena Presbyterian Church, Pasadena, Calif.; Miss Ruth Lister, Graduate School of Theology, Oberlin, Ohio; and Mr. William S. Hockman, Glens Falls, N. Y., who acted as Chairman. Sixteen manuscripts were entered and judged by criteria developed by the committee. This filmstrip on the vocation of the Director will be produced this coming year, with the committee of judges acting in the capacity of advisors to Dr. Elmer Million and Rev. W. Randolph Thornton, of the National Council, who will pilot it through production.

## Intercom at Work

### Continued from page 185

switch on the speaker microphone in each room controls that.

"Of course, you can ruin the effectiveness of such a system by using it incorrectly," Gregory continued. "I make a conscientious effort not to interfere with teaching. I try to save up messages for transmission at the end of the school day.

"Naturally, it serves for many emergencies, too. Often it will enable the teacher to answer a call without leaving her classroom. For instance, here the fire alarm system is on a separate circuit. If that system went out, we could transmit the alarm through the intercommunication network. I can foresee giving instructions via the intercom in case of any other disaster.

"In addition, it's helpful for announcements of fieldtrips, athletic events and for directives specifying exactly when the students should leave their rooms for assemblies."

Experience with the sound system has enabled the Roosevelt faculty to develop some practical teaching applications, particularly in conjunction with the tape recorder.

"There are several important outcomes of this," Gregory pointed out. "It teaches the child good listening habits; it also teaches him good speaking habits. We've learned that a child usually is quite self-critical of his speaking voice if he actually hears himself talking. Children like to work with the equipment. There's a little ham in most of them; they rarely have mike fright.

"The equipment is in constant use. We start each week by broadcasting the flag salute. Almost every week we broadcast student-prepared plays on safety, health, manners and the like. Occasionally we have a guest speaker talk on a timely subject such as safety," he added.

"Sometimes I'll see a very fine play being put on while I'm in a classroom. If the teachers and I believe it's something that should be shared by the entire student body, it's quite simple to put it on through the intercommunication system.

"We broadcast many educational radio programs. In Wisconsin these are limited largely to the university station, WHA and its affiliates and WLS in Chicago," Gregory said, outlining Roosevelt's program.

"In the fall we write Madison to get a schedule and sample of the programs for the year. The teachers decide what materials they want and we place our

order and work out our schedules accordingly.

"There are times when the program doesn't fit into our teaching schedule. For example, the class may be on a fieldtrip at the time of the broadcast. We merely make a tape recording of the program for use at any other time. We also record other programs of a vital nature, when they do not fall into the school day or fit into the schedule, for current event classes. We find that a stock of 10 or 12 rolls of tape is sufficient for our needs since the tapes can be used over and over again.

"The sound equipment especially is helpful in rehearsals for such events as our annual music concert—we have an extensive music program—and special shows," he explained. "The students in the show often go to the multi-purpose room for what might be termed their dress rehearsal. The rest of the class listens to the rehearsal in their home room and is ready with suggestions and criticisms when the participants return. The rehearsal also is recorded so that the players can hear themselves.

"The members of our faculty have developed scores of ingenious ways to implement their teaching with our audio-visual equipment supplemented by that available through the city's audio-visual library. But education in general has a way to go.

"I found the army to be far ahead of schools in the use of AV methods. Actually, we're now approaching the point in this advanced form of education that the army reached in 1943. We're a decade behind but I think we're beginning to close the gap."

## What about Radio? Continued from page 191

(6) A discussion should be held immediately following the broadcast to check for understandings and make plans for future activities.

In addition to the above, these hints will be helpful for an improved listening experience:

(1) Maintain the classroom at a comfortable temperature.

(2) Arrange the seats in a semi-circle around the radio.

(3) Seat the students early so that when the program comes over, the class will be ready to listen.

(4) Be certain the station is pre-selected and coming in before class so that all necessary adjustments can be made to insure clear reception.

(5) Permit the students to sit where they choose because they will usually sit where they can hear best.

We know that *all* audio-visual materials can do their individual jobs well. Let's give radio a chance!

# Looking at the Literature

STANDARDS OF PHOTOPLAY APPRECIATION by William Lewin and Alexander Frazier. Published by Educational and Recreational Guides, Inc., 10 Brainerd Road, Summit, New Jersey.

Historical data regarding the component parts of a motion picture—the story, actors, producers, and cinematographers—are presented and discussed. Standards of photoplay appreciation are outlined. Movies, the authors hold, are as good as the public demands or as bad as it will permit. Activities are given that alert the perception to the reasons why one produc-

tion is of more worth than another. The latter part of the book is devoted to a pictorial synopsis of the photoplay *Julius Caesar*.

AN APPRAISAL OF THE EFFECTIVENESS OF SELECTED INSTRUCTIONAL SOUND MOTION PICTURES AND SILENT FILMSTRIPS IN ELEMENTARY EDUCATION: A dissertation by Sister M. Jamesetta Slattery, S.S.J. Published by Catholic University Press, Washington, D. C.

In cooperation with Encyclopaedia Britannica Films, the late James E. Duncan of Rochester, N. Y., and the

Rochester diocesan school system, Sister M. J. Jamesetta has compiled data regarding the use of audio-visual equipment and materials in fifth-grade social studies.

MASS COMMUNICATION: TELEVISION, RADIO, FILM, PRESS by Erik Barnouw. Rinehart & Company, 232 Madison Ave., New York 16, N. Y. 1956. 280 pages. \$3.50.

Erik Barnouw traces the rapid rise of mass media of communication and analyzes the psychological problems of effective communication. This is followed by discussion of individual media—their special characteristics, censorship problems, organization. A closing section discusses sponsorship by business, government, and nonprofit organizations. Audio-visual educators may find the comments about business-sponsored teaching materials of special interest.

TEACHING TYPEWRITING THROUGH TELEVISION by William R. Pasewark, Bureau of Business Research, Michigan State University, East Lansing. 1956. 64 pages. \$1.50.

In an experimental test, Dr. Pasewark has demonstrated the effectiveness of television typing instruction. The results are that superior speed and at least equal accuracy were achieved by television students compared with students in the conventional classroom. This research monograph presents in detail the technique of administering the test as well as the results.

MODELS FOR TEACHING by Martha F. Meeks. The Visual Instruction Bureau, Division of Extension, The University of Texas. 1956. 40 pages. \$1.

This booklet, the sixth in the "Bridges for Ideas" series, acquaints teachers with the different kinds of teaching models and their application in various subject matter areas. It lists criteria of selection; suggestions for using models; procedures to be followed in their construction, and sources of more information about teaching models.

USING THE CONSULTANT by Charles H. Dent, Virginia Hufstedler, and Martha F. Meeks. The Visual Instruction Bureau, Division of Extension, The University of Texas. 1956. 8 pages 50 cents.

This little pamphlet shows why consultants are invited to school systems, how they may be used, when they should be used, and how to arrange for consultative service.

# New Filmstrips

Described and evaluated by **ROBERT CHURCH, WALTER PILDITCH, and HAROLD WARD.** Producers should send review copies of filmstrips to Robert Church, Audio-Visual Coordinator, Herman Felsenthal School, 4101 S. Calumet Ave., Chicago 15, Illinois.

## SINGLE SUBJECT FILMSTRIPS

(Visual Education Consultants, 2066 Helena St., Madison 4, Wisconsin) **Black and White.** Subject Area and Grade Level as indicated.

**Michigan (34 frames):** Geography for 4-6 Grade. Series of scenes emphasizing Michigan's natural resources and industries which have developed as a result. Good for introduction and study of state of Michigan.

**Singapore (42 frames):** Social Studies for 6-7 Grade. After location of city on map, the filmstrip covers its importance as world port, history of founding, important buildings, commercial enterprises, and industries such as tin smelting, pineapple canning, crude rubber and latex storage and transfer to ships. Additional material is included to explain importance of transportation of timber, spices, copra, and rubber from Malayan Jungles. Some frames are vague and need added explanation by instructor. Class preparation before viewing is advised. The use of the excellent accompanying study sheet is a must.

## CO-OPERATIVE LIVING SERIES

(Long Filmstrip Service, El Cerrito, California) **Black and White.** Subject Area: Social Studies. Grade Levels: 5-8.

**Our Country (50 frames):** Shows how great resources of the United States are made possible by physical placement of continent of North America. Adaptations of these resources to our industrial might is explained.

**What Our Country Does for Us (63 frames):** Points out the varied opportunities for individuals to follow a line of work for which they are especially adapted. Strip emphasizes our rich heritage.

**What We Must Do for Our Country (51 frames):** Stresses civic responsibility and co-operative living. There is an ample supply of thought questions and test questions at the end of each filmstrip.

## OUR PETS SERIES

(Young America Films, 18 E. 41st St., New York 17, N. Y.) **Color.** Subject area: Language Arts and Science.

**The Parakeet (38 frames).** Susan's mother brings a parakeet to Susan while she is sick. Susan and Blue Pill, the parakeet, become great friends during her recovery and afterwards.

**The Pony (35 frames):** During a visit

to her grandfather's farm, Jill has a pony named Bucky. Back at school in the fall, the girl misses the pony and wants to see it again. The Red Cross Drive helps the teacher find way to bring the pony, Bucky, to the school to help the class.

**The Kitten (38 frames):** Tic, Tac, and Toe are the names given to the new babies of Mrs. Whiskers. Billy later gives away Tic and Tac after they grow for awhile. Keeping Toe, later Billy's mother gives it away also; however, the now fully grown cat finds its way home over several miles.

**The Rabbit (36 frames):** A neighbor of Mary has several rabbits for pets. After Mary aids the neighbor in caring for the animals, she is given one for herself. She later names the white rabbit Bimbo.

**The Puppy (36 frames):** An unwanted puppy in a pet store, Hopeless is bought by Jack. Jack takes good care of Hopeless and learns to train the puppy. Hopeless repays Jack by saving Jack's sister from having an accident on the street.

**The Turtle (37 frames):** While on a picnic that was taken with the family, Johnny and Jane find a big box turtle in the woods that they take home with them. The new pet at home is named Pokey Joe and furnishes entertainment for the children.

The entire series is excellent for the primary grades. The vocabulary was well chosen and as new words were being introduced, familiar and known words were used. In addition these strips are an excellent means of teaching care of pets.

## DON'T DISCARD DAMAGED SLIDEFILMS\*

Magic Mylar **SPROCKETED** Transparent Splicing tape repairs torn, gouged, strip films **BETTER THAN NEW** — without the loss of a **single frame.**

Applied directly over the damaged film — on both sides — Magic Mylar (only 1/1000 of an inch thick) repairs, reinforces and holds the broken film together — **WITH A STRENGTH OF MORE THAN 3 TIMES** the original film.

## MEYERCORD Film Library DECALS

Cut Container Identification Costs—  
Speed Up Return of Film Subjects

RECENTLY ADOPTED BY LOS ANGELES COUNTY SCHOOL SYSTEM

The most practical idea in years for identifying film containers is the use of Meyercord Decals, specially designed and developed for this application. First to adopt Meyercord Film Container Decals on a widespread basis for all subjects in their library was the Los Angeles, California County School System. Meyercord Film Decals may be custom imprinted and serially numbered if desired. They actually become an integral part of the metal surface and titles may be stencilled or typed. You're invited to write for samples and full information.

... and VICTOR'S improved  
**Hi-Lite optical system puts 38% more  
light on the screen**

Crisp pictures . . . sharp contrasts . . . 38% more light on the screen under adverse classroom darkening conditions. Yes, the Hi-Lite optical system with MARK II shutter is Victor's answer to glass walled schools. You owe it to yourself and your students to see how Victor with its Hi-Lite optical system helps solve your classroom projection problems.

Check ALL these advantages of Victor 16mm Projectors:

1. Easy 1-2-3 threading and operation
2. Exclusive Guardomatic Safety Film Trips for complete film protection
3. Sapphire-tipped shuttle for longer service
4. Lubrimatic Oil System with one-spot filling
5. 180° Swing-out lens for easy threading and cleaning
6. Still picture, reverse, power rewind, and many others

### 16mm SOUND-ON-FILM CAMERA

with Professional Heavy-Duty 3-Lens Turret

Auricon proudly presents the new "Cine-Voice II", a worthy successor to the versatile Cine-Voice I now in use by Newsreel Cameramen and Film Producers all over the world. The "Cine-Voice II" is available in a choice of models to suit a variety of filming requirements, such as...

- ★ Self-Blimped Camera for picture only, runs synchronously with double-system sound recorder.
- ★ Self-Blimped Camera for Single-System Sound-On-Film. Shoots picture and optical sound-track on same film at same time.
- ★ Self-Blimped Camera for Single-System "Filmagnetic" Sound-On-Film. Shoots picture on film carrying magnetic stripe.
- ★ Combination of Optical or "Filmagnetic" Single-System Sound-On-Film. Camera is quickly converted from Optical to "Filmagnetic" Sound without the use of tools.

Please write to BERNDT-BACH, INC., 961 N. Mansfield Ave., Hollywood 38, California, or phone HOLLYWOOD 2-0931 for free "Cine-Voice II" literature and prices.

In your classrooms—

## for versatile light control, more beauty ... drapes and shades of Du Pont TONTINE®

From complete blackout for audio-visual use to controlled sunlight for regular class activities—you add both utility *and* beauty to your classrooms when you combine opaque drapes of "Tontine" permanently flame-resistant vinyl with translucent window shades of washable "Tontine."

**"Tontine" washable drapery material** is lightweight, pliable—yet extremely durable and available in a wide selection of interior patterns and colors. Flexible and soft, drapes fold back compactly when not in use. Drapes of Du Pont "Tontine" resist fading, deterioration, discoloration, shrinking and stretching.

**"Tontine" washable window shade cloth** comes in 45 colors including seven translucent "Sky Colors" that transform

the glare of direct sunlight into a soft, pleasing glow—regulate light to protect sight. Severe tests prove "Tontine" won't fade and stays pliable for years under exposure to sunlight. Will not water-spot or stain, and is completely washable.

### Where drapes are impractical—

Du Pont offers shadow-proof Triplex "Tontine" window shade cloth, excellent for room darkening. Or for a high degree of opacity plus really rugged wearing qualities, investigate Du Pont's coated canvas "Tontine." Mail this coupon today for sample swatches and full descriptive literature on Du Pont "Tontine" drapery and window shade materials.

## FILMOSOUND SPECIALIST... why it's the world's leading sound projector!

More schools and churches use Filmosound projectors than any other type. The reason lies in the machine itself.

You get a combination of exclusive features that meet the toughest teaching requirements. For example, the Filmosound Specialist offers:

- 1** *400% longer life*—critical film-handling parts are surfaced with genuine sapphires.
- 2** *Easiest and fastest set-up*—top mounted reel arms with no overhang; safe, smooth tilt mechanism.
- 3** *Full complement of controls*—still-picture clutch and reverse

let you review whole scenes or stop to discuss a single frame.

- 4** *Sharpest picture*—straight-line optical system; 5-element lens; rhodium reflector.
- 5** *Quality sound system*—big 8-in. speaker; 15-watt amplifier.
- 6** *Trouble-free operation*—all-gear drive; three film sprockets; metered lubrication.

Ask your Bell & Howell Audio-

Visual dealer for a demonstration. He's listed in the yellow pages of your phone book. Or write for complete information, Bell & Howell, 7117 McCormick Rd., Chicago 45, Illinois.

## "Something New Added" An 11th (July) Issue

A welcome bonus will reach our subscribers early in July—an extra, 11th issue of EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE. This will be our "July Convention" issue and will be in addition to the ten regular issues that have been published regularly since the magazine was founded in 1922.

Many AV conventions will take place in July: among them, the NAVA Convention and Trade Show.

The National Audio-Visual Trade Show is one of the great Audio-Visual events of the year, but unfortunately—it is an event that not every Audio-Visual educator will be able to attend. So we have thought of this way to bring it to them.

This July issue will not only cover the NAVA and other summer conventions, but it will afford a New Equipment Review based on much the same principle that has proved so popular and helpful as that applied in the annual December "Blue Book" review of new materials. It will also carry detailed *programming* of the bigger-than-ever NAVA Convention, including those of the various national meetings and workshops being held continuously.

So—something new is added for our readers: an additional issue without additional charge. For the many thousands who will get to the July Convention and for the many thousands more who would like to but who cannot, this new July issue of Educational Screen & Audio-Visual Guide will provide an open window to the wonderful, exciting and ever-expanding AV world.

## Cover: Grasshopper and the Ant

This month's cover picture is from the Lotte Reiniger Silhouette Film, "The Grasshopper and the Ant." The film is distributed by Contemporary Films, Inc., New York 16, N. Y. Lotte Reiniger pioneered in the development of animated films. She perfected her technique in Germany, in the early 20's, and in 1926 she produced the first full length animated film in history titled "The Adventures of Prince Achmed." Her figures and designs are created by free-hand scissor cutting and she works with incredible skill and speed. To quote the British Film Institute: "Lotte Reiniger's silhouettes are in the tradition of the Eastern shadow theatre. . . ."

## Accent On Photography!

Since the April issue of EDScreen & AVGuide was devoted to emphasis on the Audio half of AV instruction, we are going to reverse things and stress the Visual half in the June issue. Watch for these leading feature articles: PRODUCING AV MATERIALS IN THE SCHOOLS . . . SLIDE MAKING IS EASY . . . COLOR SLIDES IN SCHOOLS . . . and others.

## Ed. Staff Change

With the loss of June in March, a Gail arrived in April to take over the May issue of EDScreen & AVGuide. Gail Martin replaces June N. Sark as Managing Editor of this publication; and will carry on in that capacity, it is expected, indefinitely. No amount of training is a substitute for experience, however, so it is fervently hoped that her readers will bear with her if this issue should fail in fully meeting the high standards in appearance and quality that her predecessor so ably set for her. — GAI

*Flexalum*® **Audio-Visual Blinds turn a sunny classroom into a dark auditorium instantly!**

*Light without glare . . . complete ventilation, too.*

Now, both new and old classrooms can be equipped for modern audio-visual training at a cost well within school budgets. The new Flexalum Audio-Visual Blind permits the most precise adjustments for any desired light condition—from bright daylight to darkness for opaque projection. It frees the auditorium or multi-purpose room for other uses. Its original cost is competitive with less versatile window treatments, and its service life is far longer, making it the most economical buy in the long run.

Flexalum's complete light control is

achieved by a new special design that permits greater overlapping of slats and much tighter closure than has ever been possible before. Channels at the sides, top and bottom of the blind prevent light infiltration around the edges. Complete satisfaction is assured by the Flexalum Audio-Visual Blind's 5-year Guarantee.

For complete information, including independent laboratory tests by U.S. Testing Co., write to: **Hunter Douglas Aluminum Division** of Bridgeport Brass Co., Dept ES-5 405 Lexington Avenue, New York 17, N. Y.

## More On the Subject

*Editor:* I noted with much interest in your March issue, that others in the film world share my sense of shock at the suggestions in the January issue on "How to Run a Non-Stop Show on One Projector."

The technical disadvantages of Mr. Bassett's recommendations have been amply covered, it seems to me, in letters from other readers. Granted that it would be more pleasing to an audience to be able to see a long film without interruption, the technique he offered does not seem to provide the answer.

May I point out, however, that for most educational films of relatively short duration — ten minutes to forty-five minutes or an hour — it has been our experience that it is preferable *not* to have a "nonstop" showing. Even when the films are on the same general subject, no two of them are made from the same viewpoint or central theme, nor with emphasis on the same aspect of the general theme.

It has been our practice in public film showings to turn on a dim light between films, during the brief time required to thread the next print. The audience seems to like this minute or so to assimilate what it has just seen and readjust its attention in readiness for the next film. In general — to have a little "breather" if the just-concluded

film has carried an exceptionally strong impact.

*Masha R. Porte (Mrs.)*

Head, Audio-Visual Department  
Dallas Public Library  
Dallas, Texas

## Plea for Response

*Editor:* Since in April we published a long list of names of foreign schools wanting to exchange tapes with schools in the United States and since inquiries of foreign schools still come in, my question is:

Are the schools in the United States responding to the INTERNATIONAL TAPE EXCHANGE PROGRAM? If so, how many schools have actually sent tapes to schools in foreign countries? Please write (at address below) and tell me about your tape exchange.

*Ruth Y. Terry*

Central Junior High School  
Muskegon, Michigan, or—  
834 Ruddiman  
North Muskegon, Michigan

## Likes Editorial

*Editor:* May I commend you for your thoughtful editorial written for Brotherhood Week? It succinctly expresses a philosophy which I have always shared.

In my work as head of the Audio-Visual Department at this library, it has been a great joy to utilize films which *indirectly* provide examples of good human relationships and which show that there is universality among men. I believe that the creative utilization of materials is the only way

which is justified. If Audio Visual specialists seek films as an end in themselves, rather than a means to an end, they are only doing half of their job.

*Nellene Smith*

Head, Audio-Visual Department  
The Greenwich Library  
Greenwich, Connecticut

## That Does It!

*Editor:* Anent my article on splicing one reel to the end of the previous reel, word limit prevented me from dealing with these points: 1. You almost need to operate from a projection booth to use the splicing method at all, and then only for entertainment (feature) films when changing reels breaks the continuity and mood of the film. 2. I spread an old bedspread on the floor to catch the film as it ran off and I don't believe the film was damaged at all. The worst that happens is in putting a splice in the trailer if it doesn't already have one. My experience showed most 16mm features are already spliced at those points and I only broke and respliced the splices; maybe taking off one frame in the process.

I picked up the idea in Beirut, Lebanon, where I was principal of the American Community School for several years. I ran the Friday night movies for the families using features from MGM, Paramount, 20th-Century Fox and Universal. I hated to break the show because of audience irritation and because the kids would take this opportunity to run around and it was hard to get them to settle down when the reel started again. A Lebanon projectionist gave me the idea when I mentioned wishing I had a second projector. One night I ran "Julius Caesar" through two continuous performances (8 reels altogether) without a break; all on one Bell and Howell.

*T. Robert Bassett.*

The Columbus Boychoir School  
Box 350, Princeton, N. J.

## Wanted: Back Issues

*Editor:* The Graduate School of Education of the new bilingual International Christian University of Tokyo invites donations of back volumes, or of individual numbers, of EDUCATIONAL SCREEN, except for Vol. 32—No. 10, Vol. 33—Nos. 1 to 10, and Vol. 35—Nos. 1 and 2, which are already in hand. It also needs back numbers of 25 other journals of education. For details of needs, write to me at the address given below. Please make no shipments until I have checked on possible duplications. Shipping costs will then be paid and a value receipt issued which makes possible income tax deduction for your contribution.

*Benjamin R. Andrews*

## ETV Research Report

Publication of a comprehensive report containing findings of 71 research projects dealing with instructional uses of television was announced recently by the Educational Television and Radio Center.

Written by Hideya Kumata, the report was published by the Center to provide a major resource document for educators and others interested in the development of television for classroom instruction. Kumata is with the College of Communication Arts at Michigan State University and made his study under a grant from the Institute of Communications Research of the University of Illinois.

The report, entitled "An Inventory of Instructional Television Research," contains abstracts of the 71 research projects. The 155-page book also contains a selected bibliography of 173 annotated items on TV as a teaching tool.

Copies of the report can be obtained from the Center at a cost of \$1.00 each.

## Workshop for Librarians

"Pattern for Progress," a workshop designed for school librarians with the emphasis on the transitional problems facing school librarians as a result of the school library's expanding role of becoming an instructional material center, will be held at San Jose State College from June 18 to 22, 1957.

Mrs. Mary Peacock Douglas, supervisor of school libraries in Raleigh, North Carolina, will supervise the five-day program. She will be assisted by other audio-visual and library leaders from the State of California. Included on the list of advisory personnel are such audio-visual leaders as Dr. Fred Harclerod, Dr. James Brown, and Dr. Richard Lewis.

The workshop, to be held in the newly opened \$1,000,000 instructional material center in the San Jose State College Library, is open to all persons interested in curriculum material center development.

Additional information on the conference will soon be released. Persons desiring immediate details may write to Miss Dora Smith, head of the department of librarianship at San Jose State.

## AV Fellowship Awards

Graduate Fellowships for the advancement of Leadership in Audio-Visual Education have been announced by San Jose State College. Established by Photo and Sound Company, audio-visual equipment and materials suppliers in California, the Fellowship Fund was presented to the college by Mr. Norman Carlson, President, and Mr. Jerome Kintner, Vice-President, of Photo and Sound, during a recent visit to the College. The fund, \$500, will provide two \$100 Fellowships for the Summer Session 1957 and two \$150 Fellowships for the academic year 1957-1958.

The statement of eligibility and selection prepared by the college follows:

"Awards will be made to candidates for advanced study beyond the baccalaureate degree, candidates for the Master of Arts Degree in Education with emphasis in the field of Audio-Visual Education and Curriculum Materials, and candidates with advanced standing seeking California Credentials. Selection will be based upon each candidate's demonstrated promise in the field of audio-visual methods, potential for leadership in the field, and satisfactory academic achievement, including qualification for advanced standing at San Jose State College. Selection will be made by a committee established by the College."

"Oh good, Wilbur found an extension cord!"

## PR Theme For NAVA Convention in Chicago

"Public Relations" will be the general theme of the National Audio-Visual Convention and Exhibit to be held in Chicago July 20-23, in the air-conditioned Morrison Hotel. The Exhibit will open this year on Saturday, a day sooner than formerly, to provide additional opportunity for inspection of equipment and materials.

William Birchfield, NAVA Convention Committee Chairman, said:

"It is easy to see that the general public lacks a clear understanding of the tremendous impact audio-visuals are having in education, industry and the religious field. We feel that the audio-visual specialist has a responsibility to help build this understanding.

"We hope that our sessions this year can serve as a practical method of spreading the know-how of public relations activity widely throughout the audio-visual field."

Birchfield pointed out that 2,500 AV specialists from seven national organizations will attend the Convention and Exhibit.

Among the groups planning to hold their own sessions during the Convention are the Educational Film Library Association, the Chief State School Audio-Visual Officers, and the Audio-Visual Conference of Medical and Allied Sciences. A Religious Workshop, for church directors of religious education, pastors, and other religious audio-visualists; an Audio-Visual Workshop for Industrial Training Directors; and an Agricultural A-V Workshop, for county agricultural agents, vocational agriculture teachers, and agricultural extension workers, will also be held during the Convention and Exhibit.

## Illinois AVA Meeting

The two-day meeting of the Illinois Audio-Visual Association held April 11-12 at Western State Teachers College, at Macomb, drew a record attendance from all parts of the state. "Western" has a strong AV department, with seven full-time staff members. After a tour of the extensive FM radio station at the college, the opening session was devoted to a re-

or motorized

## Levolor venetian blinds are the answer to audio-visual problems

Audio-Visual education methods are still being perfected with new ideas emerging every day. Because of this constant progress and change, educators vary in their opinions of what constitutes a properly darkened room. One thing is certain, each educator has his own ideas of the type of light control he desires. Recognizing this fact, Levolor makes it possible for each individual instructor to have the exact lighting conditions and perfect control he

favours. Whether you specify a Levolor Motorized A.V. Blind, or a Manually operated Levolor A.V. Blind, you can at all times control the lighting conditions of your room.

*The Scientifically Developed Audio-Visual Blind*

port on "Educational Values of Closed Circuit TV," by Dr. Lloyd J. Trump, Director of the Commission on the Experimental Study of the Utilization of the Staff in the Secondary School. Dr. Trump told of the foundation-subsidized experiments in Hagerstown and in Evanston, and listed a number of positive findings which he stated we already "know" about TV teaching. Some of these were less positively stated by Clair R. Tetterer, Director of School Programs, on Station KETC, Channel 9, St. Louis, in a talk at the closing session of the second day. Three classes, in Science and in English Composition (9th grade) and in Beginning Spelling (2nd-3rd grade), were taught in large groups (150 in

high school, 75 in the elementary) exclusively by TV, with a teacher and a teacher's aide standing by but forbidden to assist the students. While the findings revealed "no significant differences" in student grades as compared with conventional techniques, there were evidences of collateral gains resulting from the closer personal relationship between teacher and pupils in normal class work. The monitor teachers were outspoken in their dislike of the limitations put on their activity in this test, and pupils in the TV classes felt somewhat short-changed. Mr. Tetterer urged that TV teaching should concentrate on things that can be done better by exclusively TV techniques, and that it be inte-

grated with other communication techniques.

The dinner meeting heard a most thought-provoking address by Maurice B. Mitchell, president of Encyclopaedia Britannica Films, on the advances made by the Russians in the "cold war of brains," in which we were presently being outdone. The greater part of the Friday morning session was given over to manufacturers and producers to demonstrate "What's New" in conventional AV. New classroom films were shown by Coronet and EBF, a new portable transparency printer was demonstrated by Ozalid, and the Polaroid "copy-master" made an instantaneous copy of the cover of this magazine.

The business meeting discussed the promotion of student projectionists clubs, in connection with holding of regional IAVA meetings. It was the consensus that such meetings should be held in conjunction with administrator, curriculum or teacher meetings, the AV program to serve the purpose and fit the theme of such meetings. Efforts are continuing to establish certification for AV specialists but in view of the trend toward reducing the number of special certificates it may be necessary to settle for the inclusion of AV competencies in other certificates. A distinguished service plaque was presented to Sid Alkire, recently resigned AV head in the State Department of Instruction.

### Adlai to Work For EBF

Adlai E. Stevenson announced on April 10th that he had accepted the chairmanship on the advisory board of Encyclopaedia Britannica Films, Inc. He will assume his new position on July 1st. In the announcement, Stevenson said:

"After years of familiarity with public questions, I have found the deficiencies in education our most serious and urgent domestic concern.

"The teacher shortage has enhanced my interest in the audio-visual techniques, and I am convinced of the need for greater public understanding of the role of the motion picture in teaching.

"The classroom teaching film is accepted by educators almost universally, but still too few parents have any true conception of what audio-visual education really means."

The former governor of Illinois and Democratic candidate for President in 1952 and last year, states this will be his first major position in private business since the election last fall.

## BRILLIANT, GLARE-FREE PERFORMANCE

SPENCER

### DELINEASCOPIES

NEW HIGH SPEED  
OPAQUE DELINEASCOPE

POPULAR GK DELINEASCOPE FOR 2" x 2",  
2 3/4" x 2 3/4" and 3 1/4" x 4" slides.

#### SUPERIOR SCREEN PERFORMANCE

World famed quality optics assure vivid, natural color richness...needle-sharp detail. AO Spencer Delineascopes provide uniform *edge-to-edge* illumination...no "hot spots".

#### EFFICIENT COOLING SYSTEMS

Skillful design protects even the most delicate color transparencies and opaque materials. Always cool enough to handle. UL and CSA electrical approvals.

#### STURDY CONSTRUCTION

Rugged...light weight...all-metal construction. Precision-made mechanical parts assure complete rigidity...positive alignment of optical components.

#### EASY TO USE

Responsive, finger-tip focusing controls conveniently located...easy screen centering of projected material...all adjustments and replacements made quickly...simply.

# Looking at the Literature

"ON YOUR FEET"—An attractively (and amusingly) illustrated free booklet just issued by the Polaroid Corporation (Cambridge 39, Mass.). It is packed with practical suggestions on uses of their new direct-positive transparencies by all who make presentations before audiences. While this booklet serves primarily public and sales meeting speakers, there is a page on "Using Slides in Teaching" and many of the general suggestions have distinct classroom applications.

ELEMENTS OF COLOR IN PROFESSIONAL MOTION PICTURES, committee report, Society of Motion Picture and Television Engineers, 55 W. 42nd St., New York 36, N. Y. \$3.50.

This 104 page book, 27 in color, while primarily of interest to the advanced cinematographer, contains much material usable by physics instructors and high school photography clubs. The color pictures are exceptionally fine and quite self-explanatory.

EDUCATIONAL UTILIZATION OF MASONITE PEG-BOARD, Masonite Corporation, 111 W. Washington St., Chicago 2, Ill. Free.

Based on a research project directed by the Stanford University School Planning Laboratory, Stanford, California, the 20-page booklet shows peg-board applications from kindergarten step-by-step through Junior College. Display building is made easy and interesting at all levels.

"AUDIO-VISUAL INSTRUCTIONAL MATERIALS" is the title of the March 1957 issue of the Educational Press Bulletin published by Illinois' Superintendent of Public Instruction. This attractive, well-illustrated, 24-page pamphlet contains 14 articles ranging from the official endorsement editorial to national AV standards. The issue (Vol. 48, No. 2, Whole No. 470) was compiled by Mrs. Beatrice S. Simmons, Acting Supervisor of Audio-Visual Education, Office of Vernon L. Nickell, Superintendent of Public Instruction.

TAPE RECORDERS AND TAPE RECORDING by Harold D. Weiler. Radio Magazines, Inc., P.O. Box 629, Mineola, N. Y. 1956. 192 pages. \$2.95 or \$3.95 (hard cover).

Written primarily for the amateur and semi-professional tape recordist, the book gives special emphasis to the use of tape recording in education.

SCHOOL PICTURES WITH A PURPOSE by Robert C. Snider. Midwest Administration Center, The University of Chicago, 5835 Kimbark Ave., Chicago 37, Ill. Vol. V, November 1956, No. 3. 4-page leaflet. 25 cents.

This leaflet discusses the use of the photograph as a means of presenting information to the public about the schools, pointing out that the use of pictures in school public relations is surprisingly infrequent and ineffective.

LUST FOR LIFE, WAR AND PEACE, FRIENDLY PERSUASION. Photoplay Study Guides by David Manzella and William Lewin. Publication Press, 4804 East

Ninth St., Kansas City 24, Mo. 13 pages each. Single copies, 30 cents each.

These guides to outstanding feature motion pictures describe the content of each film and give suggestions for classroom study of the films. *Lust for Life* is the Metro-Goldwyn-Mayer film adapted from Irving Stone's novel and telling the story of painter Vincent Van Gogh. *War and Peace* is a Paramount picture based on Tolstoy's great novel. *Friendly Persuasion* is a semi-historical comedy-drama about a Quaker family in southern Indiana at the time of the Civil War. The picture is based on a collection of short stories by Jessamyn West.

# Tribute To A Pioneer

**Today a Truth Emerges;  
Tomorrow It Is Proven.**

Anna Verona Dorris was the author of the first textbook in the audio-visual field. When I was first exposed to visual instruction in a formal course, it was the only text. If I didn't then fully appreciate what an excellent book it was, I do now. I re-read it the other day. It is amazing the way this old text withstands the test of time.

Read for yourself some of the words from this remarkable book. Read for instance, some of the things Anna Dorris wrote relating to what visual instruction is all about:

*"Knowledge is gained through rich and varied experiences, and these experiences are very largely sensory experiences.*

*"The sense of sight is the most powerful and effective means of conveying impressions to the mind. It therefore follows that visual instruction is the most effective way of communicating knowledge.*

*"Through visual experiences they (children) come to desire the information that is in books, and so are impelled to learn to read intelligently.*

*"In visual aids the teacher finds the most efficient instruments wherewith to bring vividness and concreteness to the child in his attempts to learn.*

*"An old Chinese proverb says, 'One picture is worth ten thousand words.'*

*"The auditory sense experience must be complemented by the experience of vision if a correct mental image is to be formulated."*

Further justifications for the use of visual materials in instruction sound as if they might have been written this morning:

*"Science and invention have brought a baffling multiplicity of new tools and opportunities . . . the responsibility laid upon the public school has been tremendously increased.*

*"If the school is to make any attempt to keep pace with life and to meet the needs of society, it must take advantage of every valuable contribution to modern science and invention as it is perfected.*

*"The more adequate use of visual instruction in teaching is coming as a result of seeing its effective use in the commercial and industrial world.*

*"Modern society demands that present day education shall be more concrete and practical and that due consideration shall be given to the use of the more modern methods and equipment."*

Here are some quotations from this book about teacher training and administering a visual program:

*"The effective functioning of visual procedures depends very largely upon the personality, the training, and the attitude of the teacher toward visual instruction.*

*"All teachers need definite training in the use of visual instruction.*

*"No constructive educational work in visual instruction can be carried on in any community without some organized working plan, and some one person responsible for the functioning of such a plan."*

What was the status of visual instruction when this text was written?

*"There is not a progressive school system in America that is not already either making use of visual instruction or seriously contemplating doing so."*

And what about the future?

*"The outlook for visual instruction as a dynamic factor in the educational field has never been more promising."*

**Visual Instruction in the Public Schools**, by Anna Verona Dorris, published in 1928 by Ginn and Company, was undoubtedly one of the most significant forces in shaping the direction and the development of the audio-visual field. To Anna Verona Dorris, true pioneer in visual instruction, we express our sincere appreciation, not only for what she thought about visual instruction thirty years ago, but for her having expressed those thoughts so well.

*Paul C. Reed*

# How do your projector maintenance costs compare with these averages?

Recently we surveyed a number of 16-mm-projector owners and service shops to learn how much it costs to maintain Kodascope Pageant Projectors in top working order.

We found—as you, too, will find—that Pageant maintenance costs are surprisingly low.

## Typical case histories show dollars and cents of low-cost Pageant Projector maintenance

1. It takes only 57 minutes per year, on the average, to service each of the 55 Kodascope Pageant 16mm Sound Projectors used by one large Midwest school system. Parts cost just \$1.45 per year per unit, average. Average yearly use per projector, 720 hours!!!

2. No annual repairs on 8 Pageant Projectors for three years is the report from a New York business firm with a fleet of 15 machines. The remaining 7 units needed only minor repairs during the three year period.

3. A fleet of 38 Pageants, operating about 500 hours per year, averaged only \$2.47 per year per unit for replacement parts! Service time per year, one hour 30 minutes.

4. After 855 hours' use per year, average, replacement parts cost just \$3.03 per Pageant Projector. Labor per

unit, one hour 15 minutes average. This is what one large Southwestern dealer and service shop reports after keeping records for two years.

5. 1500 hours with no time lost for repairs—that's what a West Coast co-ordinator of A-V services reports. His school system owns six Pageant Projectors, which have cost less than \$10.00 to maintain—about \$1.67 per machine.

## WHY PAGEANT COSTS ARE SO LOW

The simplicity of Pageant Projector design is one major low-maintenance factor. A Pageant Projector has fewer working parts to wear out, fewer to clean or adjust. And it runs at lower pulldown-shaft speeds; less vibration and wear is the result.

Pageant Projector simplicity makes minor maintenance jobs simpler, too. Parts are easy to get at.

## NO OILING NEEDED

You never have to oil a Pageant Projector. It is permanently lubricated at the factory. This completely eliminates the most common cause of projector breakdowns—over- or underoiling.

## READY WHEN YOU NEED IT

Why should you miss showing a good film at the right psychological moment

because of needless projector breakdowns? Your trouble-free Pageant is ready to roll any time you need it.

Ask your Kodak A-V dealer for a free demonstration. See Pageant Projector picture brilliance and sharpness. Hear the superb sound reproduction. Try the simplified setups. Choose from three basic models designed to fit your needs and budget.

No more oiling worries; nylon gears, oil-impregnated bearings, etc., give you permanent pre-lubrication.

For complete service accessibility, the amplifier and projector mechanism are easily removable.

**EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.**

Please send me complete information on the new Kodascope PAGEANT 16mm Sound Projectors, and tell me who can give me a demonstration. I understand I am under no obligation.

# Producing Audio - Visual Materials in School Systems

*Editor's note: This is the first of two articles to be presented by Mr. Kemp dealing with AV production in central departments of school systems, and in individual schools.*

by  
**Jerrold E. Kemp**

No longer is the production of audio-visual materials in school systems considered an unnecessary frill to the audio-visual program. The publication of texts and manuals dealing with simple production techniques, the recent completion of a series of sound films treating the preparation of inexpensive teaching materials, numerous demonstrations and workshops in the area of local production of audio-visual materials, as well as the development of actual programs and services on the local level evidence the increasing recognition of the importance of this activity.

There are, however, a number of questions being asked by school administrators, supervisors, and teachers. Are there some common practices, activities, and trends in local production which should be valuable in most school systems? What purposes are being served by locally prepared materials? What types of materials receive attention? What facilities are available for use? Who are the people engaged in production work? How does a school system get started on a production program.

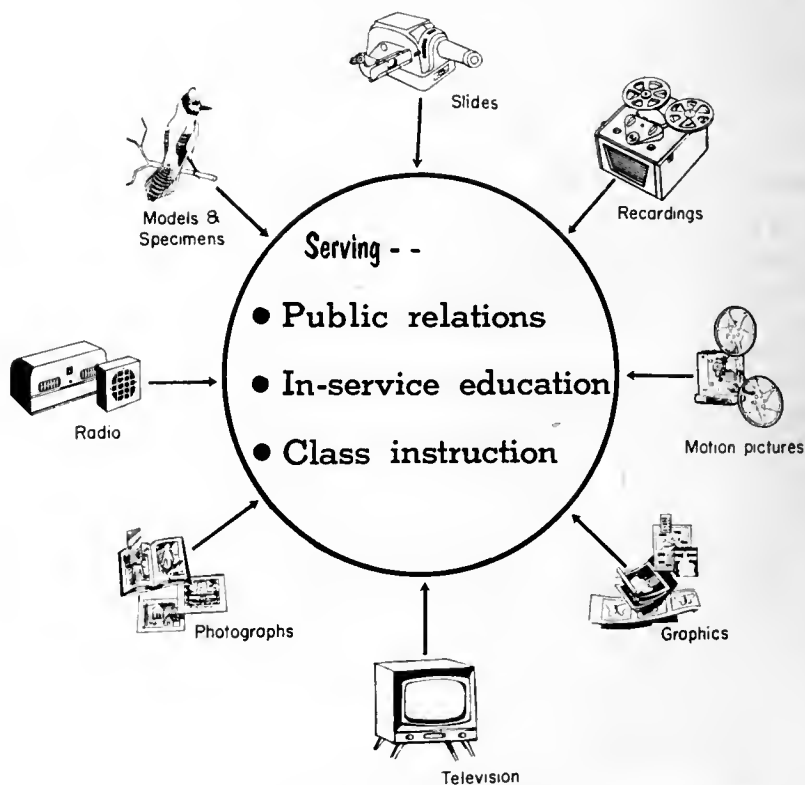

The questions and the local production aspect of audio-visual programs have been of particular interest to the author. He has engaged in photographic production work on the school system and college levels and has instructed graduate students and teachers in the preparation of inexpensive teaching materials.<sup>1</sup> These experiences and interests have led to a detailed study of production activities in school systems.<sup>2</sup> A nation-wide survey was conducted to determine the extent of activity and then personal visits were made to nine midwest school systems with outstanding production programs. The findings, some of which are reported here for the purposes of inter-

preting and helping to develop local production programs, reveal that in many situations local production work is making valuable contributions to school programs and that school people, from superintendents to students, are enthusiastic about these activities and their results.

## Purposes Served

Local production activities provide materials to fit specific local needs in each school system. These needs serve three major areas: public relations, in-service teacher education, and classroom instruction.

A number of administrators refer to the importance of specific audio-visual materials that interpret the school program and school needs to the community. Some superintendents are particularly pleased to have sets of color slides or films on phases of their programs for use when addressing luncheon groups, or as part of a discussion program on television. A number of other administrators point to the contributions made by specific materials in support of a bond drive or as counteractions against unfavorable criticism on some phase of their school program.

**"The purposes which may be served by the variety of materials produced in school systems."**

Frequently supervisors want materials for in-service training. Such things as projected charts on the organization of the school system for orienting new teachers, photographic records of outstanding class activities for showing to groups in workshops, or large blow-ups of threading diagrams for instructing teachers in the operation of projectors are cited as having definite places in improving the understanding and proficiency of teachers.

The need for instructional materials on community resources and other curriculum topics is the strongest justification given for production activity. In many instances audio-visual directors and instructional supervisors point out that although commercial materials

materials that will show how the local water department obtains, purifies, and distributes its water.

### Materials for Production

All kinds of audio-visual materials were produced locally at one time or another by the school systems considered in this study. Particular needs, available equipment, and personnel competencies are reasons for limiting the variety of materials in most situations. Some types are easier to work with, are less expensive, and as a result, are more readily prepared.

The greatest attention is given to two-by-two slides. Thirty-five millimeter cameras not only are found in many audio-visual departments, but are also

"Members of an audio-visual department producing a sound motion picture on school activities."

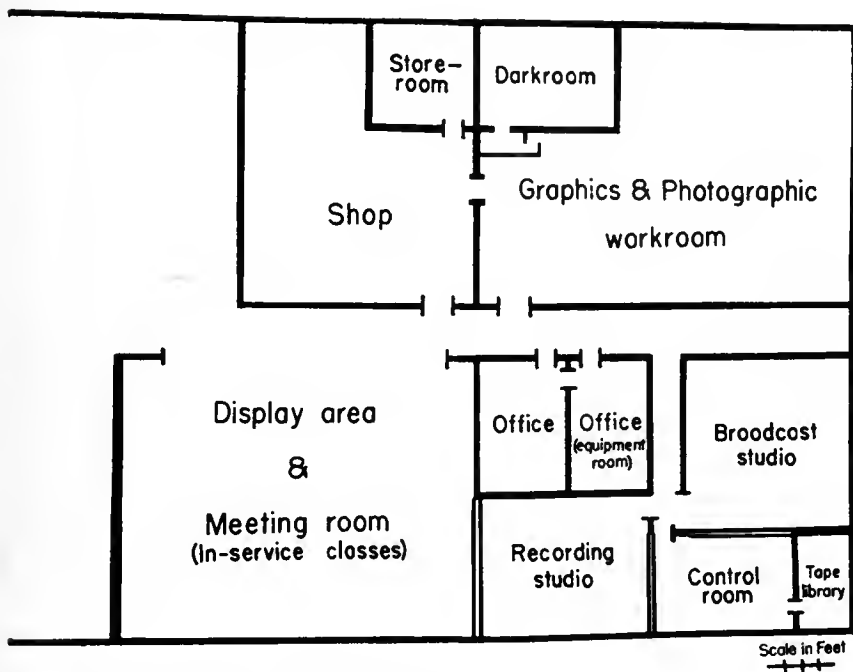

teacher committees recommend the preparation of study prints on specific curriculum topics (example — "Transportation in Our Community").

Motion pictures, while a more expensive type of production, effectively satisfy certain needs in almost every school system, large or small. Some community subjects are filmed for instructional use, while films made on aspects of the school program for use on television, are also used to acquaint new teachers with the local program. In more than one instance community agencies or local concerns make funds available for the preparation of films on important community services, activities, or problems.

Radio and television programming are other forms of production activity which prove worthwhile in a majority of school systems. Most larger school systems have established radio and television departments separate from audio-visual services, while smaller systems tend to maintain all such functions under the supervision of the audio-visual director. Programs are produced over school-operated FM radio stations as well as in cooperation with commercial radio and television facilities. A large portion of the latter programs interpret the work of the schools to the community.

Certain other materials may receive less attention in production. In some school systems pictorial materials are collected from magazines and other sources and then mounted (dry mount, wet mount, or laminate with plastic) for preservation and ease of use. In a few larger systems trained personnel prepare posters and charts for administrative use. Other personnel fix and mount nature study objects, embed flowers and small animal forms in plastic, and construct models and dioramas. Practically all materials are available for use by teachers.

(Continued on page 237)

"Suggested floor plan for production facilities in the audio-visual department of a school system."

have, and no doubt will continue to make up a large share of the audio-visual materials used in schools, curriculum policy emphasizes the need for acquainting children with their immediate surroundings. Just as each person is an individual unto himself, so each community and its many functional aspects must also be considered unique. Therefore, in any school system strong need should exist for supplementary materials with local application. One director illustrated this point by explaining that while it is satisfactory for an eighth grade teacher to use a commercial film on water supply that is generalized to fit nation-wide use, why not then bring the topic closer to home by also making available ma-

possessed by a large number of individuals. The ease of shooting color and the home processing of certain other films for immediate use make this an outstanding medium with which to work. Slides are prepared on a wide range of topics, including community resources, school programs, class activities, field trips, and as close-up copies of useful materials for instruction. In most instances materials for classroom use are placed in the materials library for distribution.

Black and white photographs generally receive secondary attention. Press or reflex-type cameras most often are used to prepare pictures for newspapers, for booklets and manuals, and for school records. Also in some systems

# Creative Teaching Through the Creative Use of Films

by  
Dr. Stanley Applegate

Director of the Curriculum Materials Center  
of the Manhasset (N.Y.) Public Schools

"Daybreak In Udi"

In the background we hear the voices of children at play. The camera moves among them and picks out a young boy learning to ride a bicycle. He gets on and falls off, gets on again and falls off, finally he rides wobblingly away. A narrator says, "This child is learning by making mistakes. What do you do when a child makes mistakes?"

This is a one minute sequence in a thirty-two minute film "Children Learning by Experience," a perfect "kick-off" for a faculty meeting, parent-teacher association program, or college class on the psychology of learning. And that one minute is all that is needed!

Probably the most expensive assumption made by the users of educational films is that the film should always be used in its entirety just as it was produced and that it should be shown to the entire classroom or even a larger audience since after all it is a mass medium. This minimal use of one of the richest of our instructional materials is expensive not only because of the innumerable other ways the same film can be used but because in spite

of the time, effort, and money which might be expended educational objectives are seldom if ever achieved through pre-packaged learning experiences which cannot possibly take into account individual needs, interests, and abilities. When films are used in this way the *design* of the instructional material itself dictates the curriculum and determines the learning process.

The creative user of instructional materials regards the film as a possible source of learning experience. His selection and method of use is based on his over-all objectives, his knowledge of the growth and development of a particular group of students, and the application of his understanding of the learning process. He may use the same film in a number of different ways to help learners understand their needs, set goals for themselves, provide activities or experiences which will help them achieve their goals, evaluate progress toward fulfilling their goals, and reassess their needs. This process can best be seen through a number of examples in different subject areas.

**SCIENCE.** A general science class is watching a short center section from the animated color film on oil, "As Old As the Hills." The sound is off and the teacher is asking the class, "How does a petroleum geologist know where to look for oil? What is he looking for when he makes a core sample? How does he know that the earth looks like this cross section on facing page?"

This film is being used as an animated wall chart to help the students through group discussion to *evaluate* their progress in a unit on the formation of the earth's crust.

**ENGLISH.** Students in a ninth grade have just seen the hair-raising opening three minutes of the feature film "Great Expectations" (available as an excerpt in the B.I.S. "Critic and Film" Series). The class is discussing: How does a film writer describe a scene like this one? Is the shooting script very differ-

ent from Dickens' version? What words would you use to paint a picture of the graveyard, the old church, the quay through the marsh, and the face of the escaped convict?

This film excerpt and discussion are planned by the teacher to have the students experience the challenge of creating visual images through words. Attempts to write a shooting script will help them *identify their needs* and *set their individual goals*.

"Great Expectations"

**SOCIAL STUDIES.** Students in a tenth grade World History class have been studying the cultures of primitive peoples. One of their richest resources has been the use of films on native populations: Africa ("Gold Coast People," "Father and Son," "Drums for a Holiday" and "The Future of One Million Africans"), Asia ("Song of Ceylon," "Focus on Kuwait"), and the Caribbean ("Caribbean" and "El Dorado"). They have just seen the Academy Award winning documentary "Daybreak in Udi." The film depicts the efforts of the local District Officer in a Nigerian jungle community to use the efforts of the younger natives to build a maternity home against the strong opposition of the superstitious village elders. The teacher stops the film at this point; the maternity hospital is built, but no one dares to use it. A young wife breaks from the circle of witch doctors, frowning elders and won-

dering tribesmen and walks slowly with dignity toward the new hospital. What will happen? How will she be treated by the other tribesmen? Will her example be followed? Are we really doing the so-called "backward peoples" a service through bringing them modern medicine and other scientific and technical assistance? If you were the local District Officer, what would you have done differently because of your present knowledge of primitive cultures?

The films of primitive populations were used primarily to help students reach their immediate goals: the search for information; the development of skills in research, observation, and reporting; and improved attitudes through understanding of peoples quite different from themselves. "Daybreak in Udi" was used as a final examination for the unit. The discussion and other activities which followed helped the group *evaluate progress* and to *set new goals* as new needs were perceived.

"Core Sample" for Oil

These students are learning through the use of these films and other materials to evaluate and select from a wide variety of sources, to gather and record pertinent data, and to report on what they have learned. Viewing by this small group can be a more fruitful learning experience than a mass showing in the classroom where there is a wider range of specific interest.

The creative user of instructional materials has in every film an endless source of educational experience. He has a wide range of materials from which to choose since he looks beyond the "ten minute pre-packaged complete learning experience" offered by the producers of so many films. He can use those available to him in an endless number of different ways for different educational goals. In each of the preceding examples the films were used in a way and for a purpose quite different from that which was intended by the producer. Their use was guided by the needs, abilities, and goals of the learners and the purposes of the teacher rather than the *design* of the material itself. This is creative teaching through the creative use of educational films.

## Producing AV Materials

(Continued from page 235)

### Facilities for Production

The extent of production activities are partially dependent on the availability of suitable facilities. Photographic darkrooms are the most numerous facility; some are as small as five-by-eight feet. Recording rooms, broadcast studios, and a control room are found in school systems operating broadcast stations and in others solely for recording purposes. Generally, workrooms, while not too widespread, serve for the preparation of graphic materials, for photo-copying, and for such other miscellaneous activities as film editing. These rooms vary in size, but have minimum dimensions of about fifteen-by-twenty feet. If model, exhibit, and diorama construction is part of the program, a shop with necessary tools and equipment is provided.

### Personnel Engaged in Production

While visiting the school systems selected for case study, administrators, supervisors, and audio-visual personnel were interviewed. As expected, the audio-visual director is indicated as the central figure for encouraging and developing the local production program. The director's interests in and awareness of the values inherent in materials produced help to promote the participation of other school personnel in the program. As time permits, a director not only engages in the production of specific materials, but also offers in-service training in production for supervisors and teachers. In addition, a director plans the handling of subject matter for production with public relations and curriculum personnel.

Most directors feel that once their production programs are recognized and established, they should not be expected to engage in routine production work themselves. Some of the public relations functions in particular are delegated to others—part-time employed high school students perform routine darkroom work; and some administrators prepare materials for their own use, after realizing the value of pictures and graphic materials for giving added meaning to such things as a report for the school board or a substantiation of a request to the community for an increased tax rate.

Supervisors in all areas, realizing values for their own work with teachers, prepare two-by-two slides. In a number of school systems interested teachers and older students are called upon for assistance in certain production areas or when such major projects as motion pictures and television pro-

grams are produced. Frequently clerical assistants in materials departments are assigned such part-time duties as mounting pictures and developing film.

Larger school systems employ photographers, artists, radio engineers, script writers, and other experienced personnel who prepare materials under the direction of professional staff members.

### Developing Your Program

We have surveyed some local production activities in school systems and have noted some of the needs these activities can serve. There is ample justification for including some aspects of these activities in any forward-moving audio-visual program. How might a director build such a program?

First, the director himself must be sold on the values of these activities and materials. Then secondly, it is necessary to make school board members, administrators, supervisors and teachers aware of how these materials can help *them* do a better job by effectively communicating ideas and information. This might be done by preparing materials for specific presentations when certain members of the school system are present. As interest is aroused it may be capitalized on by working with individuals to prepare particular materials which will serve their needs. Eventually the sincere backing of the superintendent and a realization by teachers of the values of such materials are important.

Often the starting point in local production is with materials for public relations use. It is here that initial administrative support may be the greatest and both funds and personnel then become available for expansion. Eventually, increasing attention should be given to the instructional needs of teachers for materials having local

A local production program does not stop here, in the central audio-visual department. The principal and faculty of each school should be encouraged and assisted in building their own local production program. It is only in this way that the total needs of a school system for local materials can be met.

Finally, realize that local production activity offers more than only materials. Such activities help those who have participated reinforce their realization and understanding of the values and purposes served by audio-visual materials and the ultimate contributions they must make to a better program of education for our youth and ourselves.

Photos by Bruce Harding

Some of the Audio-Visual facilities in an Aldrich Hall classroom are: on the left, an overhead projector; in the center, an electrically controlled sectional chalk board, projection screen mounted out from the wall, and above this a junction box and mounting for microphone; on the right behind the grill, a tweeter-woofer speaker for high quality reproduction.

# Conceptual Integration for Business Education

Aldrich Hall, located on the campus of the Harvard Business School, is the result of a carefully thought out plan in which two apparently irreconcilable educational concepts were integrated. Completed in 1953 at a cost of over three million dollars this seventeen room building is the end product of faculty research which sought to determine what physical facilities would be most advantageous and efficient for the teaching of business administration. Major consideration in the planning

of these facilities was obviously directed toward the requirements of the Case Method of Instruction, the educational concept which represents the basic philosophy of the Harvard Business School. Yet in spite of the relatively limited use being made of Audio-Visual media at that time, careful consideration was also given to the part these media and related techniques might play in the future activities of the School.

Actually it is a testimonial to the

sagacity of the Harvard Business School faculty that the techniques of Audio-Visual Education received consideration of any kind in the planning of this building, for two reasons. First, the Case Method of instruction in Business Administration (group analysis and discussion of actual problems experienced by business and industry) did not in general seem to lend itself to the use of Audio-Visual media. The great bulk of the case material had been and still is presented to the students in

printed form. Second, with few exceptions the use of these media had not at that time produced results significant enough to warrant more than limited consideration in such planning. The fact that they received consideration at all demonstrates an open-mindedness which is too often missing in long range educational research.

First known use of Visual Aids at the Business School was made during World War I when 3¼"x4" glass slides were introduced in several courses. In 1927, when the School was subsequently moved from the Harvard University buildings in Cambridge to its present location on Soldiers Field Road, provision was made for projecting 35mm motion pictures in the auditorium of Baker Library. Shortly thereafter a collection of 35mm industrial films was begun and by 1928 this collection had grown to 40 titles. At this point, and with few exceptions, interest in the use of Audio-Visual media began to diminish. It was not until the outbreak of World War II that they were again used to any considerable degree by courses other than those relating to Production Management. With the influx of military personnel into School activities in 1941 the use of A-V media was again on the upswing.

In the years that followed World War II, several members of the Harvard Business School faculty became interested in the possible use and effectiveness of 16mm sound motion pictures as a method of industrial training. A grant was made by the School's Division of Research for the purpose of conducting studies in this area. These studies were successfully culminated in the publication in 1948 of "The Use of Training Films in Department and Specialty Stores" by Harry M. Hague and in 1949 by the publication of "The Film in Industrial Safety Training" by Paul R. Ignatius.

In succeeding post war years classroom use of recordings, slides, film strips and motion pictures while somewhat limited was, none the less, indicative of continued faculty interest in their potential as educational tools. This interest was emphasized in the preliminary planning for Aldrich Hall. A full size pilot class room was built to determine not only the physical facilities that would best meet the needs of the Case Method of Instruction but also to determine by experimentation how Audio-Visual media might best be melded into the Case Method concept. How well this pilot classroom served its purpose is demonstrated by the coordinated facilities now available for instructional purposes in this structure.

The seventeen classrooms arranged on the three floors of Aldrich are gen-

erally similar in all respects except size. Three are eighty man rooms, thirteen are one hundred man rooms and one accommodates one hundred fifty-eight people. The seating arrangement is semi-circular in nature, with each succeeding tier of seats being placed in back of, and slightly higher than the preceding one. Seats are of the swivel type making it possible for a student to turn and face any other student in any other part of the room.

Electrically operated chalkboards di-

vided into three sections make up the greater portion of the front wall of each of these inside rooms. Sections of the chalkboard are designed to be raised or lowered by electric motors. This provides easy access to the top and middle sections and makes possible the utilization of a board much larger than those of the conventional type. Additional small supplemental and permanently mounted chalkboards are affixed to the wall.

(Continued on page 241)

erally similar in all respects except size. Three are eighty man rooms, thirteen are one hundred man rooms and one accommodates one hundred fifty-eight people. Seats are of the swivel type making it possible for a student to turn and face any other student in any other part of the room.

Second-grade students from the Milwaukee, Wisconsin Metropolitan Area, under the supervision of Mr. Jack Young, Principal of Jefferson Public School, Town of Greenfield, and a member of the Vocational Guidance Committee of the Milwaukee Engineers' Society, use the Numberaid Abacus in the first Numberaid Abacus Contest sponsored by the Milwaukee Engineers' Society.

# Johnny Can Learn ARITHMETIC

by Dr. Andrew Schott

*Dr. Andrew Schott is a member of the teaching staff at Marquette University and an Educational Consultant in Milwaukee, Wisconsin. For an account of the development and experimental use of the Numberaid Abacus, see the article "Adventure in Arithmetic," February, 1955 EDUCATIONAL SCREEN, page 65.*

ON SATURDAY MORNING, May 12, 1956, three of the main meeting rooms of the Milwaukee Engineers' Society Building were extraordinarily quiet, extraordinarily so, because around the tables sat first, second, third, and fourth grade children listening intently.

Before each child was a pencil, a printed test form, and a Numberaid Abacus. The final words of instructions from the educators who served as judges were given. Stop watches in the hands of the Vocational Guidance Committee members of the Milwaukee Engineers'

Society were checked, and a new kind of competition was under way. Forty minutes later, the preliminary round of the first Abacus Contest ever held in the United States was over.

A cherub of a boy, a first grader, one of the sixty-odd youngsters on the way downstairs for ice cream and cake, was heard to say, "That wasn't hard. If there had been more time, I'll bet I could have worked them all, without a mistake, too." Sixteen of the semi-finalists were chosen to participate in the final contest, held Saturday afternoon, May 26, at Radio City. The final contest was televised by WTMJ-TV as one of its weekly educational programs, "Let's Experiment," sponsored by the Milwaukee Museum.

The contest was divided into five sections of four minutes each. The first section of the test contained numerical addition problems; the second, multiplication; the third, subtraction; the fourth, division; and the fifth, word problems in each process and in combinations of processes.

The four first-grade finalists correctly completed an average of:

(1) Nine problems in addition which contained one- two- and three-digit numbers involving carrying.

(2) Twelve problems in multiplication, involving multiplication of two-digit numbers by one-digit multipliers, and involving extended multiplication in any column.

(3) Eleven problems in subtraction of numbers containing four digits, involving borrowing in any column.

(4) Twelve problems in division, which contained three digits in the dividend and one in the divisor, with remainders.

(5) Four word problems which contained addition, subtraction, multiplication and division.

The four third-grade finalists correctly completed an average of:

(1) Twenty-three addition problems, extending to three-digit addition of seven addends, which contained two decimals.

(2) Twenty-five multiplication problems, extending to four-digit multiplicands and three-digit multipliers, containing decimals in both multipliers and multiplicands.

(3) Twenty-four subtraction problems, extending to five-digit minuends and subtrahends, containing decimals in both minuend and subtrahend.

(4) Twenty-three division problems, extending to division of a three-digit dividend by a two-digit divisor, with remainders.

(5) Eleven word problems involving all four processes, as well as measurement and determination of an average.

The purpose of the contest was to give students in the primary grades the opportunity to demonstrate their achievement as well as the potential of the Numberaid Abacus as a tool for teaching arithmetic. Many of our schools do not permit children to study arithmetic formally in Grades One, Two, and Three, thereby handicapping them in the development of basic arithmetic at an age when such study is a source of pleasure to them.

The climax of the competition came the following Saturday afternoon when prizes and certificates were presented to the finalists by the President of the Milwaukee Engineers' Society, Mr. Frank Roberts.

The success of the first competition has resulted in setting the dates for the second Numberaid Abacus Contest. The preliminary competition is to be held Saturday morning, May 4, 1957. The final competition is scheduled for Saturday afternoon, May 18. Planning for the preliminary round of the second Numberaid Abacus Contest to be held May 4 is already well under way.

More than twenty schools in the metropolitan area of Milwaukee will participate. The Numberaid Abacus is being used extensively in Norfolk, Virginia; Sacramento and North Sacramento, California; New Castle, Delaware; Culver, Indiana; West Hartford, Connecticut; and Birmingham, Michigan. These areas are watching developments with interest, and may even attempt to organize their own contests this year.

## Conceptual Integration

(Continued from page 239)

Facilities for the projection of slides, film strips and 16mm sound motion pictures are ample and well planned. A permanently mounted screen is part of each room. In some rooms it is mounted behind the sectional chalkboard, in others a screen of the pull down type is mounted above and set out from the sectional chalkboards. This latter type is located in rooms where classes make maximum use of overhead and opaque projectors. Projectors of these types are generally used in very close proximity to the screen and must therefore point upward to a considerable degree. This would make it impossible to keep the projector lens and the screen in a parallel relationship unless the angle at which the screen hangs was changed. By placing the mounting above and set out from the top of the chalkboard the bottom of the pull down screen may then be pulled back and fastened to the base of the chalkboard bringing about the desired parallel relationship necessary to eliminate "keystoning" and distortion. When films, filmstrips or slides are projected, the screen is allowed to hang free and assumes the normal vertical position.

Nine rooms are equipped with permanently mounted 16mm projectors. In rooms where classes use considerable numbers of films the projector mounting is a dual one, but in all other rooms the projector mounting is a single one. Projector controls may either be operated from the back of the room in the conventional manner or may be remotely controlled by the instructor from the front.

An amplifier system, including permanently mounted Altec Lansing tweeter woofer combination speakers, fulfills sound requirements. Remote outlets in the rear of each room make it possible to connect a tape recorder or turntable into the system and still limit the play back to individual rooms. A series of shielded lines makes it possible to tie-in any one room with any combination of rooms and to pipe in programs which originate in the recording studio located in the Audio-Visual Division. These same lines make it possible to record discussion in any classroom by means of equipment mounted in this same studio.

Acoustical treatment is variable in nature. A broad band of acoustical tile has been placed across the rear of each room and draw draperies have been hung on the walls. By covering or exposing the hard surfaces of the side walls the instructor or sound technician can make the room as live or as dead as needed to suit individual desires.

Four levels of illumination can be produced by intermixing overhead incandescent and fluorescent lights, controlled by duplicate light switches located in the front and back of each room.

The physical facilities of the Division of Audio-Visual Aids are presently located on the ground floor of the building linking Aldrich Hall with Baker Library. This layout includes clerical and administrative office space, an acoustically treated motion picture preview studio, an acoustically treated recording studio, an editing room, an equipment storage room and a drafting room. A wide range of equipment is available for photography, projection, recording and playback and includes RCA, Revere, Magnicord and Stencil-Hoffman tape recorders, Eastman and Arriflex motion picture cameras, Ampro and Bell & Howell sound motion picture projectors, Besseler Opaque and Overhead projectors, Viewlex and Bausch & Lomb slide projectors.

As the demand for Audio-Visual Service has grown the Audio-Visual staff has been enlarged accordingly. At present seven people are employed full time. They include a Director, Assistant Director, a Research Assistant in Audio-Visual Education, a General Assistant in charge of Service, a Film-Tape Librarian, a Draftsman and a Secretary. Within this grouping are all the skills needed to handle nearly any phase of Audio-Visual activity including sound recording, motion picture production, photography, graphic reproduction and bibliographic service.

One of the most difficult problems encountered by the Division since its inauguration in the summer of 1953 has been the attempt by staff members to acquire ready made commercially produced Audio-Visual material suitable for integration into the curriculum. Up to the present, results have proved to be generally unsatisfactory, except in instances where motion pictures illustrative of production operations or processes have been required. Even in these instances material which would lend itself to the Case Method was found only after considerable searching. In 1954, for example, approximately 239 commercially produced films were reviewed by staff members and faculty. Of these 239 only ten met classroom requirements. This, of course, does not imply that all films reviewed were in any way technically inferior in quality or subject with respect to the purpose for which they were originally designed. The figures cited have been given merely as an indication of the fruitlessness of attempting to adopt commercially produced Audio-Visual material to the Case Method of Instruction.

... and we encourage local production of instructional materials."

Polaroid Corporation Announces

# QUICK, EASY WAY

**Now you can make slides right in your laboratory or classroom—and have them ready to project as you make them.**

Polaroid Corporation has perfected a film which produces black-and-white slides right in the camera. You just load a *regular* Land camera with this new film, click the shutter, pull a tab and lift out a transparency of exceptional photographic quality. It's ready to project 20 seconds later, after a quick hardening and mounting in a snap-together plastic mount. It's now as easy and natural to use slides in your work as it is to pick up a phone or dictate a letter.

The complete system includes the standard Polaroid<sup>®</sup> Land Camera, the film, mounts, hardener and projector, plus a versatile Copymaker that lets you make slides from any text material, existing photographs, charts, graphs, titles or what have you. You have a choice of two sizes of film—2¼ x 2¼, or 3¼ x 4 (for existing "Lantern Slide" projectors). The quality of the film is remarkable—brilliant grainless, and so sharp that projection to 12-foot

(2) Simply slip it into a mount, and (3) project it as big as you want.

# TO MAKE SLIDES!

screens shows no loss of detail. And it's extraordinarily fast (speaking photographically, now)—day-light speed of 1000 (ASA equivalent exposure index).

The slides cost about one-third as much as conventional slides. But the real saving is in the time and effort that it takes to put a picture on the screen. Whenever you've been on your feet before a group, you've felt the need for a key picture (or perhaps several) to make sure your story gets across. Now you can make those pictures right in your office, classroom or laboratory and begin to use your

listeners' eyes as well as their ears. Send in this coupon for more detailed information.

# 10 I's for AV Directors

by WALDEMAR GJERDE and GUY WAGNER

*Dr. Gjerde is specialist in Audio-Visual Education at Iowa State Teachers College, Cedar Falls, and Dr. Wagner is director of the Curriculum Laboratory.*

**A** SHORT TIME AGO, the authors were discussing the traits of the effective audio-visual director. It seemed natural that such terms as initiative, inventiveness, and inspiration should enter the conversation. As the discussion continued, it became evident that many of the words used in describing such a person began with the letter "I."

Soon it became a game to select the words most descriptive of such a person, the one rule being that the word must begin with the letter "I." The writers will be first to admit that the use of this rule makes the selection of these descriptive terms a bit artificial—nevertheless, the search paid off in the discovery of some provocative ideas.

Perhaps audio-visual directors may be able, in some measure at least, to get a better insight into their responsibilities by matching themselves against these terms. And so we ask you, Mr. Audio-Visual Director, are you an . . .

## *Invigorator*

. . . one who gives energy to, one who animates?

The audio-visual director who gives energy to and animates the teaching of those with whom he works is making school life dynamic for both teachers and pupils. He suggests films, records, filmstrips, pictures, and any of the numerous teaching materials that will give life, color, and meaning to the activities of the classroom.

## *Innovator*

. . . one who introduces new and novel ideas?

Ours is an age of rapid advancement in many areas of living. The alert mind is one that seeks new ideas and recognizes those that have merit. Thus, the efficient director keeps abreast of new developments, selects those that have promise, and introduces them to the teachers.

## *Inspirer*

. . . one who motivates and encourages?

New materials need introduction—new techniques need trial—the director will motivate teachers to use new techniques. Through suggestions, demonstrations, and examples, he encourages teachers to try new films and filmstrips, to experiment with new equipment, to do some "brainstorming," to try out ideas that are fresh and promising. The teachers with whom he works see each new day as a challenge because they know adventure lies ahead in the classroom.

## *Implementor*

. . . one who accomplishes, fulfills, carries out?

All the suggestions in all the books ever published accomplish nothing unless they are used; unless steps are taken to carry out these suggestions. The audio-visual director is in a strategic position to help teachers put these suggestions to work. Emerson has said, "The ends pre-exist the means." As the audio-visual director helps teachers put techniques and materials into practical application, the curriculum comes to life in the classroom and the ends sought are achieved.

## *Incorporator*

. . . one who interlinks and combines separate parts into a unified organization?

Equipment and materials are usually in great demand, and the audio-visual director needs to make plans so that the staff of the entire school cooperates in the use of this equipment and materials. Records must be kept, plans must be made, and the needs and wishes of the teachers need to be incorporated into one large over-all plan.

## *Intercessor*

. . . a mediator, one who acts between parties to reconcile differences?

When problems arise, when conflicts develop regarding the use of materials or scheduling of equipment, then an intercessor needs to be present. Differences can be ironed out by recognizing the point of view of each individual and his right to hold an opinion. The audio-visual director can succeed only as he handles differences of opinion in a diplomatic way.

## *Illuminator*

. . . one who enlightens, makes something clear and understandable, helps others "catch on"?

Good teaching means good explanations, so that which is taught is clear to the learner. For instance, the intricacies of a sound projector may be frightening to the unenlightened—to the person who has no opportunity to become familiar with its operation. The audio-visual director can become an illuminator by conducting in-service classes, by serving as a resource visitor in the classroom, and by helping whenever help is needed. It is especially important that he present explanations with clarity and patience—at the level of the learner's ability to understand.

## *Invigilator*

. . . one who diligently keeps watch or makes watchful?

One mark of the successful director is that he has a sharp eye, a watchful eye, a "weather eye"—he is forever alert to new materials, new equipment and new ideas. Furthermore, he makes teachers more sensitive to the need for improved materials; these teachers become more watchful. His is the job of weighing the value of these materials and encouraging teachers to use those that are most effective.

## Improviser

... one who prepares something in a ready manner because it is needed on the spur of the moment or for a special occasion?

"Teachers wise, improvise." Many times during the year when projection equipment or other means fail, there is need for devising a satisfactory substitute. The audio-visual director should help teachers develop an attitude that emergencies and special occasions are ingenuity "challenges."

## Investigator

... one who follows up or makes research by patient inquiry, observation, and examination of facts?

New ideas and new materials are constantly being presented in educational periodicals, books, and other types of professional literature. From this avalanche of suggestions, the audio-visual director, working closely with teachers, must select the most useful and appropriate. Together, teachers and the director weigh the value of the new against traditional procedures. The director must also be ever alert to ideas presented at meetings, on television, and by teachers who have discovered techniques that get results. His is the job of channeling the good ideas that emerge in one classroom to other teachers in the system. The competent director is an investigator who discovers, sifts, and tries out new techniques and materials that appear promising.

A bounteous budget surrounded by a lackadaisical administration and dull-eyed teaching would be something analagous to the poor-little-rich boy who had a castleful of toys but little spirit for their use.

The competent audio-visual director must be a leader, one who has a broad educational understanding so that he can wisely help teachers choose and use the best of teaching tools and techniques. He must also be wise enough to understand that the human element takes priority over material things in teaching.

The writers have not sought to describe the ideal audio-visual director for they realize that equally good directors may have markedly different personalities.

They do feel, however, that thinking about our responsibilities and the way we work may often provide a clue for improving in one area or another. The ten 1's have been suggested not for the purpose of painting a static picture descriptive of all audio-visual directors, but rather as a way of triggering fresh thinking about our work.

You bought me for a purpose. But now, after much use, I'm damaged goods... I'm dirty... I've picked up oil spots... I have unsightly scratches... I'm beginning to buckle and curl, so that I go in and out of focus. People who see me become irritated, because my defects show up on the screen.

Yet my defects can be so easily corrected. I can be made clean again, free of scratches, always in clear focus.

Now that I am in trouble, won't you please ask Peerless how you can put me back in the pink of condition — so that I can accomplish my purpose.

Help me to be all I can be.

I want to live a long and useful life  
— and get the results you bought me for.

He refuses to send Jerry away and admits his measure of responsibility for Jerry's behavior. As the film ends, Jerry gives his knife to Bud.

## Appraisal

The situation portrayed in this film has been adapted from a case story from the files of a youth agency of the Los Angeles Community Chest. Technically, the film is of high quality with excellent photography and sound and professional direction and action. The characters are well played and believable. Sufficient use is made of dialogue sequences to establish a realistic setting for the problems discussed. The length of the film precludes the provision of background material on the families of the other boys in the group, and does not allow time for discussion of the background of the group worker. The evaluating group felt that perhaps the dramatic treatment of the story tended to interfere with the educational effectiveness of the film. The "happy ending" seemed to provide a conclusion to the story which in actuality was only begun. In spite of these factors, however, the group felt that the film could be successfully used under competent leadership for discussion. Community groups can be helped to a better understanding of the problems faced by youth agencies and the film would be helpful in the training of persons engaged in various forms of recreational and group work.

—William W. Kidder

## BOY WITH A KNIFE

(International Film Bureau, 57 East Jackson Blvd., Chicago 4, Illinois) 19 minutes, 16mm, sound, black and white. Produced by Dudley Pictures Corporation. \$95.00. Teacher's Guide available.

### Description

This film presents the highlights of a situation in which a detached group worker takes the beginning steps in helping a group of potential juvenile delinquents along the road to acceptable group behavior.

The film opens at the dinner table of the Phillips family. Jerry Phillips' stepmother recites a long list of misdemeanors which Jerry has committed at school, then announces that she "gives up" and declares him to be unmanageable. When Jerry asks to speak alone with his father, he is put off. In rage, he goes out on the front porch and plunges his knife into the door.

Following the titles, the narrator introduces five members of the neighborhood gang, including Jerry Phillips, the boy with the knife. The boys demonstrate their typical anti-social behavior by pushing and rowdy talk. The narrator points out that while they are not now criminals, they may soon become so unless they receive help.

Bud Williams, the detached group worker, is next introduced as he begins his efforts to get acquainted with the group which has been reported to him by the school officials. Bud frequents the hotdog stand where the boys hang out and eventually succeeds in gaining their attention. His first problem is to prove to them that he likes them even though he does not approve of their behavior. They must be brought to the point where they can trust him before he can help them release their hostility in more socially acceptable ways.

The film shows some of the situations in which Bud is able to gain the confidence of the boys and gradually direct their activities into somewhat more normal patterns. Particular emphasis is placed on the problem of Jerry Phillips and his dependence on the knife as a substitute for the parental support which his family fails to provide. In a number of situations, Jerry pulls the knife in arguments with the other members of the gang. Bud intervenes quietly each time, but does not take the knife. He tells Jerry that he wants it only when Jerry has decided that he no longer needs it and can give it to him voluntarily.

After considerable time and patient guidance, the gang has become a club with a name and meeting place at the local community center. Bud has become a trusted friend but many problems remain. When the club decides to elect officers, Jerry is nominated for sergeant-at-arms, but his stepmother declares that he must give up associating with the gang of "criminals" and should be sent to live with his grandmother. Jerry is deeply hurt when his father fails to listen to his side of the story. Going to the election meeting in spite of his stepmother's order, Jerry is elected; but another member of the group challenges the result and complains that Jerry is no longer a member since he is to go to his grandmother's. In the ensuing argument, Jerry's father is called "chicken," and Jerry again pulls the knife. Bud again intervenes and Jerry leaves in a rage. Bud and the boys decide to follow and help him regain self-control. Jerry goes home and begins slashing the furniture with his knife. His stepmother, badly frightened, demands that his father take him to his grandmother's home. For the first time, Jerry's father is able to assert himself, and declares that from now on everyone in the family will be heard.

## THE HUMAN BODY: CIRCULATORY SYSTEM

(Coronet Films, Coronet Building, Chicago 1, Illinois) 13½ minutes, 16mm, sound, black and white or color, 1956. \$68.75 or \$125.00. Teacher's Guide available.

### DESCRIPTION

This film combines animation and live photography to present the functions and processes of the entire circulatory system. The pattern of blood flow, the various organs of circulation — heart, lungs, and kidneys — and the functions of and the interrelationships among these organs are shown in detail.

The opening scene shows an animated diagram of the upper portion of the human body. The heart is described as the basic organ in the circulatory system.

latory system — one of the most important in the whole body. A combination of modern surgery and close-up photography enables one to look through a thoracic incision and get an unusual view of a live dog's beating heart. We see the heart pulsing rhythmically as it carries on its ceaseless job of pumping blood.

Attention is next directed to drawings which show the contributions of Vesalius and Harvey, two medical pioneers whose work brought about a greater understanding of the circulatory system's role in the human body. The narrator states that during the sixteenth century Vesalius discovered that the blood flows in tubes or blood vessels. Harvey proved two things — that the blood flows in a given pattern and that it is circulated to bring nutrition to body cells and to carry away cell wastes.

The major portion of the film is devoted to an analysis of the circulatory system itself. Cinefluorography shows the human heart as a dark mass of muscular tissue moving between the lungs. Magnified sound lets the audience hear the heartbeat as if listening through a physician's stethoscope.

Detailed animated drawings show the heart's four interior chambers — two auricles and two ventricles. The action of the valves is shown. Light colored or purified blood is carried away from the heart in arteries, and dark colored or impure blood is returned in veins.

The scene changes to show the live dog's beating heart again. This time, a large artery called the "aorta" is carefully pointed out as the narrator makes explanations. Magnified drawings show how an artery branches off into smaller blood vessels, arterioles, which branch off into capillaries. The blood is next shown entering slightly larger vessels, veinules, before it flows into larger veins which carry it back to the heart. The pulmonary artery and vein are pictured and described, and a highly magnified microscopic scene shows blood circulating through the capillaries of a frog's foot.

An animated diagram shows how the blood flows as it passes from the head to the arms, to the legs, and enters the abdominal organs. As the blood passes through the abdomen, it enters the kidneys. The narrator explains the complex system of filters within the kidneys and tells us that they purify the blood of certain types of wastes.

In conclusion, diagrams summarize the principles of circulation. The film points out the body's need of good food and sufficient rest and suggests ways of relating the actions of the circulatory system to everyday living.

## APPRAISAL

The film is recommended for use on the junior and senior high school levels in general science and biology classes. It should also be of interest to teachers of health and safety. The film explains and clarifies through visualization the functioning of the entire circulatory system. Animated illustrations, drawings, close-ups, overprints, and carefully introduced scientific terms enhance the teaching value of the film.

— Pearl Walker Headd

## WORLD WAR II: PROLOGUE, U. S. A.

(Encyclopaedia Britannica Films, 1150 Wilmette Avenue, Wilmette, Illinois) 28 minutes, 16mm, sound, black and white, 1956. \$125. Teacher's Guide available.

## DESCRIPTION

Excerpts of documentary films from the collection of the National Archives in Washington, D. C., combine with animated maps to make a filmed, narrated review of the highlights of the historic events of 1920, through 1941 — up through the entry of the United States into World War II. The film provides a chronological account of the stages through which American public opinion passed in the "great dilemma" of the many citizens who wanted to help the victims of Axis aggression, and at the same time wished to avoid foreign entanglements. Various world leaders are pictured, with their voices in the background; but Roosevelt, Churchill, Willkie, and Chamberlain are seen and heard at several points in the historic chronology.

A sequence of scenes reporting some of the activities at Pearl Harbor on Sunday morning, December 7, 1941, opens the film; then scenes show the surprise bombing attack by the Japanese which catapulted the United States into World War II. The picture uses this declaration of war as the point of departure; the events which led up to and caused the second World War are traced and explained in the major portion of the filmed pageant. America is seen as building a wall of isolation around itself. The great depression which struck at both European and Yankee economy is shown to be a strong contributing factor making possible the rise of totalitarian states in Italy, Germany, and Japan. Bound together by their common interests, these nations become the coalition of the Axis power; the failure of the League of Nations to prevent the danger of the military threat they posed to the rest of the world and also the British philosophy of "Balance of Power" is

portrayed as giving rise to the theory of the Policy of Appeasement by other European nations.

Following the tenets of this theory, the film shows how Europe failed to act, and from 1931, until 1938, Japan invaded Manchuria; Italy attacked Ethiopia; Germany announced the rebuilding of military power; Italy and Germany backed the Spanish revolutionists; Germany occupied the Rhineland as Japan invaded China; finally, Germany annexed Austria. By this time all of the Axis powers had walked out of the League of Nations. We hear Chamberlain's announcement after the concession at Munich, "I bring you peace with honor" and Churchill's reply, "They chose dishonor. They will have war."

Congress, trying to separate America from the distress abroad, passed the "neutrality acts" which the film illustrates. In 1937, President Roosevelt seeks to halt Axis expansion by diplomatic pressures. The film shows Germany bombing Poland, after having signed a military pact with Russia. So, with the "balance of power" exploded in their faces, and the Munich agreement mocked, England and France declare war on Germany. Public opinion in America still feels that the best interests can be served by avoiding war, however we amend our position, and begin to make war materials available to France and England. Thus our industry is shown gearing for war.

Soon Germany invades Denmark and Norway, and begins to blitzkrieg across Holland and Belgium into France. Italy invades France. England stands alone, after we see her being pushed into the sea at Dunkirk. In America, people are entering the second stage of opinion — feeling that we should help England more, but still refrain from war. We will act as an arsenal for freedom. The film preserves the sight of President Roosevelt addressing Congress with his "Four Freedoms" speech.

In a sequence of scenes, Germany's airforce pounds Britain relentlessly in the Battle of Britain. A map of eastern Asia shows the Japanese expansion up to 1941; she eyes the European colonies in Asia, having ambitions as far as the East Indies, due to her emphasis on greater east Asia prosperity. Public opinion is entering the third stage of "all out defense of the western hemisphere." Congress further implements the arsenal theory by passing the "lend-lease bill." The United States seizes the Axis shipping in our ports, and closes their consulates. The film shows scenes of Germany's sudden attack on Russia. Some Americans now begin to demand all out aid, including troops to all allies.

Roosevelt and Churchill meet to formulate the Atlantic Charter. Events in the documentary move swiftly and the film closes as President Roosevelt addresses Congress, asking for a declaration of war.

#### APPRAISAL

The organization and editing of these scenes make this film an excellent help to understanding the conditions underlying World War II, and the positions taken by the United States. The committee feels this film will be useful in U. S. and world history classes in senior high, college, and adult discussion groups. It also feels that the group

leader should point out specific objectives to keep in mind while viewing the film. This and other suggestions are included in the film guide. The subject matter is presented at a rapid pace mentioning only the highlights of the dramatic events. It may be necessary to view the film a second time to comprehend adequately the implications of the "great dilemma" which faced America and to realize the importance of public opinion in a democratic society in carrying the nation through such a crisis as World War II.

## SEW EASY: HOW TO MAKE POCKETS

(Almanac Films, Inc., 516 Fifth Avenue, New York 36, New York) 12 minutes, 16mm, sound, black and white, 1954. Produced by Iowa State College. \$55. Reduced rates available on complete set of 25 titles and units of 8. Student workbook available.

### DESCRIPTION

SEW EASY: HOW TO MAKE POCKETS is one of a series of twenty-five films presenting Lucille Rea, sewing specialist, in a demonstration which takes place in a planned sewing center. In this film, Miss Rea shows how plain patch pockets are made. Two pockets are made in this demonstration—one with a rounded bottom and a hemmed top, the other with square bottom corners and a flap top.

Miss Rea begins by using models to point out the details which make the difference between a good pocket and a poor one. The hemmed top pocket is made first. After the paper pattern is removed from the fabric, the hem is made so that all of the raw edges are concealed. Miss Rea says that this feature adds to the neatness of the finished pocket and that it will prevent raveling when the garment is laundered. The row of stitching that is used for making the side seams of the hem is continued around the pocket and forms a guide for the seam allowance. An enlarged model in contrasting shades is used to let the viewer see the line which the final row of stitching will follow.

As the demonstration continues, the demonstrator makes several slits in the edge of the pocket at the bottom corners and explains that this will prevent puckering when it is stitched to the dress. The seam allowance is turned under and pressed; the pocket is pinned in place, basted, and stitched. It is now pointed out that back stitching and an extra row of stitches run diagonally across each end of the hem will give added reinforcement to the pocket when the dress is worn.

In the next sequence the flap top pocket is made. An enlarged diagram shows that the flap is merely an elongated hem and that it is made as such. The seam allowance is now turned under. The bottom corners are folded; the pocket is pressed, pinned in place, basted, and stitched.

The conclusion mentions that subsequent units of the dressmaking demonstrations will be taken up in other films in the series.

## APPRAISAL

HOW TO MAKE POCKETS is typical of the other twenty-four films in the SEW EASY series. In this film Lucille Rea, clothing specialist, plays the role of teacher-narrator in the step-by-step demonstration. Close-ups, enlarged models, diagrams in contrasting shades, and the skillful use of camera angles enable the viewer to see and follow each part of the demonstration clearly. The steps are carefully explained, and whenever necessary the pieces of cut fabric are identified with gummed tape markers. The language used is simple, and the equipment is similar to that which is likely to be found in most sewing centers or homes.

This series of films should be of interest to sewing teachers and classes as well as to persons who sew at home. They are simple enough for use with beginners, and yet contain enough short-cuts and other valuable information to make them helpful to advanced groups.

— Pearl Walker Headd

# New Filmstrips

## IN-SERVICE

"LEARNING THROUGH SEEING -TACHISTOSCOPIC TEACHING TECHNIQUES," Tachist-O-Filmstrip, Sunland, California. Subject Area-Reading; Black and White; Teacher In-Service Filmstrip; 45 Frames.

The filmstrip does inform the viewer of a number of devices and products available to work with tachistoscopic techniques. According to its title, which indicates the emphasis to be on teaching techniques, a major weakness is apparent. Very few concrete suggestions are incorporated that are designed to aid the novice in this field. Some of the recent developments have not been included.

## SOCIAL STUDIES SERIES

Encyclopaedia Britannica Films, Inc., 1144 Wilmette Avenue, Wilmette, Illinois. Subject Area-Social Studies; Color; Grade Level-Fifth and Sixth Grades.

"THE KNIGHT AND HIS TRAINING" (48 Frames). Although as a whole this filmstrip was very thorough and instructive, it left certain questions to be answered. For example, it failed to show how a boy was chosen to be trained for knighthood. However, it was quite illuminating as far as the actual training from boyhood to manhood was concerned. Before showing this filmstrip, time should be allowed for developing a vocabulary suitable for this grade level and subject. Best understanding would probably be facilitated by explanation of the class system which prevailed during this period also. This filmstrip is recommended for use during the developmental stage of a unit on the fifth or sixth grade level.

"THE CRUSADES AND THEIR SIGNIFICANCE" (55 Frames) This filmstrip was very well done. It deals not only with the factors which gave rise to the crusades, but the important influences they had on the generations which followed them. It clearly demonstrates how the intermingling of different cultures brought about new habits, attitudes and desires, and ultimately a more liberal civilization. Because it gives such a thorough overview of the material studied in a unit on the Crusades, this filmstrip would probably be most useful as a culminating activity, rather than as a part of the initiating stage. It adequately covers the concepts to be taught on the fifth or sixth grade level.

Described and evaluated by **ROBERT CHURCH, WALTER PILDITCH, and HAROLD WARD.** Producers should send review copies of filmstrips to Robert Church, Audio-Visual Coordinator, Herman Felsenthal School, 4101 S. Calumet Ave., Chicago 15, Illinois.

## ARCTIC WILDERNESS SERIES

"RODENTS OF THE NORTHLAND," Encyclopaedia Britannica Films, Inc., 1144 Wilmette Avenue, Wilmette, Illinois. Subject Area-Natural Science; Color; Grade Level-Middle and Upper Grades; 45 Frames.

This filmstrip is one of a series based on the motion picture "Arctic Wilderness" produced by Walt Disney. In very colorful and clear pictures the small animals of the Arctic region are pictured. This filmstrip shows the life of chipmunks, pack rats, snowshoe hare, and lemmings (weasels) in the Northland. It emphasizes their coloration, hibernation, and in the case of the lemmings, migration from one area to another. Questions at the end of the filmstrip provide a good means for

evaluation. It may be used with the rest of the series or independently as desired. The photography is superior. Reading level is about fourth grade.

## YUGOSLAVIA

"YUGOSLAVIA TODAY," Visual Education Consultants, Madison, Wisconsin. Subject Area-History and Social Studies; Black and White; Grade Level-Seventh and Eighth; 33 Frames.

A brief history of Yugoslavia, from the reign of the Roman Empire to the present. The filmstrip asks this question: "Do you know these words, Christianity, empire, republic, created, craftsman, tradition, assembly and communist?" With well selected photographs—these terms, as to their relationships to the history of Yugoslavia, are defined. Yugoslavia, the ancient land with a rich past and an interesting future, is the main theme of the strip. This filmstrip could be used to: (1) develop interest in foreign lands; (2) show how people, in foreign lands earn a livelihood; (3) show the political development (or change) of a foreign country as it grows. The title of this filmstrip is somewhat misleading. Four-fifths of the reel covers Yugoslavia's history, while only one-fifth gives insight into "Yugoslavia Today."

# Church department by WILLIAM S. HOCKMAN

## God On The Soundtrack

While churches do not have the money to "demillize" biblical material, they can commit cinematic folly on a smaller and more dangerous scale, perhaps. And when it comes to film-folly, we have already seen several previews of ghastly possibilities.

The objectification of the voice of God via an echo chamber is a case in point. The producing company might have settled for reporting via the narrator's voice at this point, but the client preferred the echo chamber representation of the voice of the Eternal. What does this do to the prophetic idea that the Creator spoke through the consciousness of his sensitive and listening creature? We raise the question. Let

the church give the answer.

And we think that an answer must be given by the leaders of the church. We also think that there is no better place to begin forging out this answer than at the International Conference on Visual Aids in Christian Education which convenes again at Green Lake, Wisconsin, September 4-11. Here is home-work, neglected for ten years, that needs attention.

As the spiritual suggests, we may "shout all over God's heaven" in some latter day, but for God to be shouting all over our imperfect paradise right now via both big and little soundtracks is just a little alarming, especially since the children (of our church schools) may be listening.

— WSH

tantism through fourteen denominationally or privately owned AV depositories throughout the United States.

Ten years ago our seminaries and church colleges took little cognizance of the existence of the newer AV tools for communication. Now some seminaries and colleges of the church have fully developed audio-visual courses and one seminary is engaged in building a completely equipped audio-visual center.

One of the earliest efforts to produce any audio-visuals for church-wide use was a motion picture entitled, *Thunder of the Sea*. Produced by the Board of American Missions, it was shown to practically every congregation of our church. Designed to raise money for the establishment of new churches, it fell short of its goal, perhaps because too much was expected of it. Our latest production efforts include a host of promotional and informational filmstrips and a short 13-minute stewardship film in color for children entitled, *The Candlemaker*. Twenty-two filmstrips are now in various stages of production—from the earliest "treatment" stage to the final shooting.

Efforts to provide guidance to the local congregation in the selection and use of audio-visual materials led to the establishment of a new department of audio-visual aids by the Board of Parish Education in January, 1949. Since then it has provided a regular quarterly service of carefully selected audio-visuals for curriculum purposes in the Sunday, vacation, and weekday church school, catechetical instruction, leadership education, adult elective courses, and summer camp courses. In addition, the department has made available a general manual for the AV Committee of the local church. It has helped to establish two excellent interdenominational resources—the Visual Education Fellowship and the annual interdenominational audio-visual workshops.

The United Lutheran Church of America cooperates fully in the interdenominational AV enterprises through representation on NCCC Committees in practically all current fields of joint

---

## The Audio-Visual Story

### In the United Lutheran Church in America

by the Rev. George B. Ammon\*

In ten short years the United Lutheran Church in America has come a long way AV wise. At the end of the war its service to congregations was limited to AV sales and advisory service. Now it has a coordinated program of production, distribution, and utilization.

Like most denominations, at the end of World War II we found a huge demand for audio-visual equipment—largely motion picture projectors and slide-filmstrip projectors. To meet this expanding need for equipment, and to guide congregations in their use of AV media, the United Lutheran Publication House established a Department of Audio-Visual Aids. I was called, from a parish where audio-visuals had been used extensively, to be its first manager. This same department now employs four persons serving in the fields of production and distribution. Very recently it was directed by the church-at-large to move forward and coordinate all audio-visual distribution.

This newer program of coordination is being guided by an official "Joint Committee on Audio-Visual Aids." It is a small delegated body with representatives from all the boards and agencies of the church. It meets twice yearly to share and guide audio-visual development, to coordinate production, and guide the evolving patterns of distribution. Each board or agency of the church produces its own material as it sees fit. However, increasingly the production of audio-visuals is being channeled through the enlarged and newly named Department of Audio-Visual Materials of the United Lutheran Publication House.

The work of the late Rev. E. O. Armbruster was an excellent foundation for the denominational audio-visual program, and also for our participation in the very necessary interdenominational audio-visual developments. He was active in setting up the Religious Film Association (an inter-church agency for distribution of films) and its successor, The Religious Film Libraries. The latter agency serves Protes-

\*Secretary for Audio-Visual Aids, Board of Parish Education, United Lutheran Church in America.

endeavor — missions, general Christian education, leadership education, stewardship, etc.

One of the strongest penetrations of the local congregational program came through the excellent stewardship films prepared by the Lutheran Laymen's Movement. Dr. Henry Endress has spearheaded the movement begun in 1950 to supply top-quality, 30 to 50 minute modern-story films to interpret stewardship in its broadest aspects. Such films as *And Now I See, Like a Mighty Army, For Good or Evil, and Salt of the Earth* have been used widely in the United Lutheran Church (on a free rental basis initially) and throughout all Protestantism (on a rental basis). One film, *45 Tioga Street*, was jointly sponsored by the Lutheran Laymen's Movement and the Board of Parish Education as part of a church-wide, year-long emphasis on the effective use of the Bible.

Excellent new color filmstrips and films depict both the quiet glory and the constant needs of our overseas missionary work. From the earliest efforts of zealous missionaries with inadequate equipment and little "know-how" in scripting, to the current professionally scripted and professionally produced films and filmstrips, the two agencies most concerned (The Board of Foreign Missions and the United Lutheran Church Women) have kept pace with audio-visual developments and opportunities. Whereas ten years ago the audio-visuals for missionary education were provided free, or for an offering, the newer and more realistic pattern of distribution is on a sale or rental basis. One of the most creative and novel approaches to picturing the foreign field is the picture-story "paper filmstrip," developed during the past three years and related to the Epiphany appeal of the Board of Foreign Missions.

Many synods (over half of the thirty-two) now furnish many of the better filmstrips to their own churches free or for a very low service charge.

A newer philosophy in the use of audio-visuals is beginning to take hold throughout our Church. Although much has been written about how to use effectively audio-visuals in the church, it is only recently that I sense a "turn in the road." We are beginning to understand these aids as resources for the broader purposes of Christian education and for the communication of the Gospel. Congregations are slowly learning that films, filmstrips, slides, and other audio-visual material should not stand alone or work alone, but be teamed with other means of reaching the whole person with the whole message of the church.

## Forthcoming AV's

A recent (Feb.-Mar.) issue of the Broadcasting and Film Commission's "News" reports BFC at work on a Near-East mission study film, *The Temptation*, for the Joint Committee on Missionary Education.

*Refugees*, a film for Church World Service, is also in process, with work in Austria and Hungary finished; with crews in Korea and Hongkong, and the final Arab refugees section slated for work about when you read this.

The Department of Stewardship, and its cooperating members, is working on a film, *Split Level Family*, a promising treatment of stewardship from the angle of the whole family.

Just getting into their very early stages are these productions: A new kit of sound filmstrips for leaders of youth for 1958 release; a film on "Christian Concern for North American Neighbors" for early '58; *Drought*, tentative working title of film on Arab refugee problems for Church World Service and perhaps ready by summer.

Periscoping denominational production effort, the following loom on the AV horizon: The Church of the Brethren is planning a sound and color filmstrip, *The Family Council*, to encourage family worship, councils, and consultations.

The Church of God is about ready to release a 30-minute sound and color film, *Against the Tide*, depicting the struggle Japanese Christians must make when they break with Buddhism. Nondenominational in approach and content, it will be an asset to the forthcoming study of Japan by the churches.

The Disciples of Christ plan the release of a sound and color film on Africa which will show the principles and concepts that guide contemporary missionary work in the Congo.

The Evangelical Lutheran Church is releasing a new filmstrip on training workers for the Every Member Canvass.

The Evangelical United Brethren has produced, *Church of Christ in Japan*, a sound and color film with interdenominational usefulness.

The Methodist Church has projected three films in a series, *Land of Decision*, spelling out the need for a new missionary approach in three typical areas — Belgian Congo, Japan, and Bolivia.

*Decision in Hongkong*, a sound and color film for youth and adults, was jointly produced by the Evangelical and Reformed and The Presbyterian USA churches.

The Reformed Church in America is now planning a filmstrip on the history of theological education from the Reformation to the present.

The United Church of Canada has completed two color filmstrips on Africa, *Copperbelt Calling* and *Into a Larger Life*, which have interdenominational character and usefulness.

Now released, or soon to be: *Prisoner Triumphant*, a 20-minute 16mm color film telling the thrilling story of Sara Perkins, formerly superintendent of nurses in the Douw Hospital, Peking. A real personality film. From Presbyterian Distribution Service, 156 Fifth Ave., N. Y. 10, at a rental of \$5.00 (to be reviewed).

Two more releases in Family Films' "Living Parable" series: *Two Sons* and

for perfect darkening of any size window!

**Jotse** MANUFACTURING COMPANY  
2349 SULLIVAN AVE. • ST. LOUIS 7, MISSOURI

*There Was a Widow*. Biblical parables in a modern setting, both with pretty fair general qualities but not outstanding. Very useful, however, and recommended for a Sermons-On-Film Sunday evening series.

General Films, Inc. (Box 601, Princeton, N. J.) has photographed the morality play, *Everyman*, into a 40-minute sound and color film of acceptable qualities only. Pioneering in this field is worthwhile and a more polished product can be expected from these people in the future. Mr. Hilliard is to be commended for this beginning.

• *How the Animals Discovered Christmas*, a 13-minute color animation film by Coronet, is just the thing for your Primary or Junior Christmas party. It will take the children to mystical Cozy Valley, where, on the night before Christmas, not a creature was stirring, except Old Doc Owl. What he saw was a plenty as the excitement spread, and every animal wanted to help. Imaginative, lovely, entertaining through the Sixth Grade. Recommended for use in non-religious setting, as at a party.

• Alexark-Norsim's (156 N. Arden Blvd., Los Angeles 4) *The Story of Joseph: Part I* (28 frames); *Jeremiah* (35); and *The Story of Ruth* (33) are good and useful filmstrips, with the artwork in full color showing considerable improvement in composition (less crowding) and color-balance (less harsh red) over some prior productions. The printed scripts have developed a better English style, casting the Biblical account into a more relaxed prose, especially in *Ruth*. The artist, too, seems to be making a better selection of the incidents and action to be pictured.

While this reviewer knows full well that we are in the literalistic phase in our AV treatment of Biblical material, it seems to him that the time has come for giving some regard to the implications and obligations of historical and literary criticism. Certainly we must come to it gradually, but let's not be too shy. Sooner or later we must read, "The story of Ruth, as set forth by a great pamphleteer against Hebrew racial exclusiveness"; and "The story of Joseph as found in a certain stratum of Hebrew literature."

Neither Jew nor modern Protestant may want to face the implications of literary and historical criticism, but in the opinion of this reviewer the producers better start sticking their toes into this chilly water right away. Shivering in indecision is no solution.

• *The World That Needed Jesus* highlights the hope of the Jewish people for a Messiah and the conditions of

the world at the time of Jesus' birth. *The Enrollment at Bethlehem* gives the why and how of the census, the journey, and the arrival of Joseph and Mary at Bethlehem. *Shepherds Out in the Fields* tells of Bethlehem, and its shepherds and their ways; shows them in their fields and how they went to the stable. *Good News to All People* pictures what the coming of Jesus has meant to the world, and how the Good News can be a part of living today.

Each has 40 frames; all are in color. The art varies in intrinsic qualities and effectiveness. In the first and fourth the pictures are too busy, too full of people and color, and too much attention is given to nonessentials. In the second it improves a bit, but there is still too many colors and some cluttering. The pictures of the third have the best general qualities.

The commentaries are well-written and nicely spoken, the four being carried on the sides of two LP records. The background music is by a full orchestra and enhances the effectiveness of such filmstrips.

This series is recommended, both for use, and for purchase by the local church for its AV library.

(Produced by SVE, but buy through your local AV dealer.)

### Films On Mission Study Theme

On the "home" side, the theme for this year's study of missions, beginning this fall, is "Christ, the Church and Race." To undergird this study a dozen denominations produced the 28½-minute color (and B&W) film, *Broken Mask*. It tells the story of two college boys who come to grips with race prej-

udice, first in themselves, and then in the church. It has average general characteristics.

On the overseas side the theme is "Japan," and eleven denominations produced the color (and B&W) film, *Younger Brother*, the story of Jiro and the manifold problems he encounters in breaking away from the age-old traditions, cultural and religious, to become a Christian. This film has above average general qualities.

Both films will be useful; more useful if utilization guides are produced for them and then followed by the users. Both films will be widely available through denominational bookstores and local film libraries across the country. (Paul F. Heard, Inc. produced the first, and Alan Shilin Films, Inc., the second, for the Joint Commission on Missionary Education in cooperation with the Broadcasting and Film Commission of the National Council of Churches.)

**BROKEN MASK** is the story of Paul Brannon, young college student, who comes face to face with the man made barriers of prejudice against the color of a man's skin and through his experiences comes to realize the true meaning of living out reconciliation in his own community.

Daily Rental Rates:  
Color \$12; B/W \$8

## Parable Films

With two recent releases, Family Films, Inc. brings its "Living Parables" series up to seven. *Another Spring* gives the parable of the barren fig tree (Luke 13) a modern setting, dramatizing rather well the story of two embittered women who repent just in time that another spring of love and life may come into their lives. *Formula for Failure* attempts to get the difficult parable of the dishonest servant (Luke 16) into modern terms but achieves only average qualities because of poor casting and loose directing. Both films, however, will have great usefulness for those needing films for sermons, for Bible study, for adult classes, for youth groups, and for mid-week series. Each is in color or B&W; has a running time of about 30 minutes; and are available from local film libraries.

## Worship Film

*This Is My Father's World* is a 12-minute color film recently released by Broadman Films (161 Eighth Ave., Nashville 3, Tenn.). On the visual side it gives scenes of deserts, waterfalls, forests, and fields, with the audio presenting a background of choral and instrumental music. While the color qualities of the pictures vary considerably, they are quite acceptable with a few shots being very impressive. The music is good, but the integration with the pictorial slips out of gear quite badly at times. One gets the impression that the next such film from Broadman will cure these minor weaknesses. With all, a lovely and useful film in a category where there are few titles, and almost nothing new.

## Church and Social Ills

If you want to arouse your church, or any of its groups, to the variety of social ills, needs and inequities to be found within your community, and indeed, within your very church, then I suggest that you show them the 17-minute color cartoon filmstrip, *What Happened to Hannah*. It will help your people see the need for Christian concern for social welfare both in and beyond denominational channels.

This adult-level filmstrip has a fast pace and a LP-recorded narration that snaps like a leather whip on a cold morning. It will bite right into smugness—even your very own brand. It will start talk, provoke thinking, and with a little help from the preacher and the official boards, motivate some action.

Henry Kiefer has done a good job on the "art work," producing 86 meaningful and interesting frames in a very ingratiating cartoon style. The commentary, by Helen Kromer, has been referred to above. Under the smoothness and bite of this commentary, there is ethical, sociological, religious and spiritual insight. Highly recommended. Alexander B. Ferguson, of the Broadcasting and Film Commission, NCC, acted as executive producer, turning out a superior job for Department of Social Welfare of the NCC in co-operation with the Denominational Staff Council. (Price \$16.00; from the DSW of the NCC, 297 Fourth Ave., New York 10, N. Y.)

## Easy Filmstrip Previewing

"On the conference table in the Director's office you will find the Christmas filmstrips and the commentaries for the same, whether printed or recorded. On this table also is a new piece of AV equipment—a filmstrip previewer. It is easy to use, and the instructions are right on it. For your convenience, also, there is a three-speed record player.

"When I am not in, you can get a key to my office in the church office downstairs. Come and go at your convenience, but do look over and book the filmstrips which you want to use during the Christmas season."

Thus read, in part, a letter going out to church school principals and teachers, and others, the first week of last November. How did things work out?

When my AV dealer called my attention to this table-type filmstrip previewer, it appealed to me right off as a time and labor saver. With alacrity I accepted his invitation to take it along for trial run. Right away it was accepted and appreciated by my teachers.

# SOUND advice

about audio materials  
and equipment

by MAX U. BILDERSEE

By tradition, by reputation and even by the lyrics of a popular song, "There's no business like show business!"

Show business is an important facet of current literature, it represents one aspect of Americana as it interprets parts of the American scene to the viewing public and it is always mirroring both the tastes of the people and the arts of both the performer and the author. In all this it merits attention at some secondary school level because as schoolmen we must assist students in the development of sound tastes for and attitudes towards this aspect of the entertainment field which will surround them throughout their lives.

Television has made theatre more real, more personal for a great many young adults throughout the country and the great names of the theatre are no longer only significant along Broadway. And the public response to fine performances will continue to bring these and the emerging theatre greats into our lives via this and other media of mass communication. Whether it is an excerpt from such a play as "No Time for Sergeants" or a full three-act drama of the impact of "The Great Sebastians" Broadway is moving into our living rooms and must be recognized in all our schools.

Records make a contribution to these studies. A basic recording, perhaps the "audio text" is "Show Biz" (LOC 1011, RCA-Victor, Camden, New Jersey) which summarizes in kaleidoscopic fashion fifty years of entertainment from the days of vaudeville to the nights of TV!

This is not a technical history such as may be found in cold print in books and periodicals as well as in old newspapers. These are the warm sounds of the art with such voices as George M. Cohan, Fanny Brice, Maurice Chevalier, George Gershwin, Will Rogers, Helen Kane, Harry Lauder, Beatrice Lillie, Bing Crosby and many other all-time great stars. Perhaps in theatre particularly it is true that "there is

nothing more permanent than change" and the recording "Show Biz" demonstrates this to perfection.

Records offer many "original cast" discs that can be effectively used to keynote the changing nature of theatre as it develops to meet the changing needs and tastes of its audience. Occasionally theatre looks backward and either through revival or through a new play employing old techniques pokes a little at itself, satirizes a period in our history, and gives nostalgia "a go" most happily. Such a musical play was "The Boy Friend" (RCA-Victor, LOC 1018) which was brought to Broadway from London a couple of years ago and was billed as "A New Musical Comedy of the 1920's." This is as close a recreation of the "flapper age" as anything we are likely to meet. This is no parody of the twenties but is rather a musical in which that period is re-born, even to the rhythms employed, the lyrics, the style of delivery and the orchestrations. If you want to introduce adaptation and its techniques the musical "Carrousel" (RCA-Victor LPM 1048) and "Oklahoma" are prime examples. But perhaps the newest will be your selection for your class and you will bring your students "My Fair Lady" (Columbia Records, Bridgeport, Connecticut, OL5090). This latter recording, an adaptation of George Bernard Shaw's "Pygmalion," not only is amusing, interesting and instructive in its own right, but is of even great value as a comparison of two forms of presentation — the book as a play, and the recording as an adaptation. Students of "They Knew What They Wanted" should have the opportunity of hearing "The Most Happy Fella."

There are many other recordings of musical comedies which are worthy of your attention for classroom use in the development of an understanding of this phase of theatre. Some, such as "Damn Yankees" (RCA-Victor LOC 1021) and "Silk Stockings" (RCA-Victor LOC 1016) will be better placed with

college students who are studying theatre. Others, such as "Bells Are Ringing" (Columbia Records OL5170), "Paint Your Wagon" (RCA-Victor LOC 1006), "Pipe Dream" (RCA-Victor LOC 1023) and too many others to list here mirror theatre of the year of their production. "Pipe Dream," starring Helen Traubel already mentioned, and the recent "Fanny" (RCA-Victor, LOC 1015) as well as Ezio Pinza's earlier recording "South Pacific" represent part of the marriage of two great aspects of theatre—opera and musical performance for popular consumption.

Musical performance brings charm and quaintness to theatre and classroom, too. "Brigadoon" (RCA-Victor LOC 1001) is a most useful example of this. And, finally, musical comedy can and does call on our own created characters and lampoon the nonexistent, intimately known America of Dogpatch, U. S. A. in the current standing room only Broadway hit, "Li'l Abner" (Columbia OL 5150). This, too, is part of the Americana of our age available on records.

For college classes in the History of the theatre three recordings may be particularly valuable. These are, "Maurice Chevalier" (RCA-Victor LPT 3042), "Noel and Gertie" (RCA-Victor LCT 1156) and "The Art of Ruth Draper" (RCA-Victor LM 1859). The first of these recordings presents a selection of song hits made famous by the famous Frenchman and delivered by him in his inimitable manner. "Noel and Gertie" offers Act I, Scene 2 from "Private Lives," an excerpt from "Red Peppers" as well as other samples of the art of Coward as an author and as a performer.

"The Art of Ruth Draper" is unique in that the recording can and does most effectively indicate the art of the monologue. On this recording Miss Draper magnificently presents three of her famous monologues, "The Italian Lesson," "Three Generations in a Court of Domestic Relations" and "The Scottish Immigrant." This aspect of American theater can make an important contribution in the theatre classes we have mentioned as well as in studies of literature. Through all of these recordings the arts of performance and

speech are demonstrated to such advantage that the recordings find still another application in the classroom situation.

In April we reported some of our correspondence with recorder manufacturers, and their responses to the specific question, "Can you tell me how best to adapt your school model tape recorder for group pick-ups and for use of low impedance microphones?" Reports from the Bell and Howell Company and the Revere Company were quoted then.

Apró tells us that "With reference to connecting a low impedance microphone into an Ampro tape recorder,

the best procedure would be to run a low impedance line from the microphone to a point within five or six feet of the recorder, and then insert a matching transformer to match the low impedance line to the hi-impedance input of the recorder. Shure Bros. and several other manufacturers market small well-shielded transformers which are suitable for insertion in a line for this purpose.

"In order to do a professional quality job of recording choruses and soloists, school orchestras, etc. it is generally necessary to use more than one microphone, and a suitable pre-amplifier mixer having individual gain con-

## Low Cost 16MM Film Storage in Open Type Cabinets With Adjustable Racks

Now you can meet any Changing Requirements by using Open Type Film Cabinets with Racks ADJUSTABLE Vertically on 1" Centers.

Cabinets are Allmetal with CLOSED TOP, BASE AND SIDES equipped with ADJUSTABLE Separator Racks for 400' to 1600' reels and cans or any combination of these sizes. Standard Widths 30", 36" and 48". All units 75" high and 15" deep.

Also available: FILM CABINETS WITH DOUBLE DOORS AND LOCK (Stationary Racks) for any combination of 400' to 1600' reels and cans. INDIVIDUAL SEPARATOR RACKS, ideal for small Film Libraries Standard lengths 29", 35", and 47".

controls for each channel and a master gain control, or the master gain control may be on the recorder if the mixer can be placed at a convenient point near the recorder so that one operator can handle all gain controls."

Bell Sound Systems, Inc. says, "The real solution to your problem lies in the type and placement of the proper microphones. The inputs on both the RT-75 and RT-88 are arranged to accept any high impedance microphone with reasonable output. The use of a cardioid microphone is certainly indicated in difficult pickup situations. But the fact that a tape recorder happens to be connected on the end of this microphone has nothing to do with the microphone itself. You will note that the model RT-75 has two input jacks which allow one to use two microphones or any mixing with radio, phono or TV programs."

Unfortunately the correspondent from the Bell Sound Systems ignored the second half of our question concerning low impedance microphones, but it can be assumed that the use of transformers, as indicated by Ampro and others, will prove satisfactory.

Columbia records offers the most unusual and unique solution to the problem described in our original letter. Before you read their reply we suggest that you go back to the beginning of this section and reread the questions we laid before them. In response they said, "We have run into your problem before and while we have solved it, it is by a method that might be considered just a little bit unorthodox. I think, however, it may serve as a solution for some of your readers. You will find that startlingly fine results can be obtained by using a 10" or 12" Permanent Magnet Speaker instead of using a mike at all. While the impedance of the speaker can be quite low, if it is used with an ordinary output transformer with a primary fed into the microphone jack of the tape recorder and the secondary fed from the voice coil, the matching is accomplished by the output transformer.

"Obviously, while the information above applies to Columbia's Model 530 specifically, it would probably apply to almost any of the other makes on the market that use a high impedance mike."

(Ed. note . . . we intend to visit Columbia Records for the demonstration, and we will report to you . . . MUB)

Mark Simpson Manufacturing Company, makers of Masco sound and electronic equipment, suggest the following, "Using a single omnidirectional microphone (low or high impedance) hung a little above and about 10 feet in front of the group, has given excellent results.

"In the event that a low impedance microphone is used, it must of course be used with a well shielded microphone to grid transformer, placed in the microphone line. It is recommended that this transformer be kept about 6 feet away from the tape recorder, or any strong alternating magnetic field, so as not to cause excessive hum pickup.

"When it is desired to pick up a very large group we recommend using several microphones placed and mixed to suit. We recommend our model EMM-6 microphone mixer for this purpose, as it is capable of mixing up to four microphones."

We shall plan to complete this report in the next issue of EDUCATIONAL SCREEN AND AUDIO-VISUAL GUIDE, and at that time to draw generalizations which may be useful to teachers and audio-visual personnel.

**For Your Audio Archives**

Two recent Columbia Records releases are excellent examples of audio archives which schools should have. These are complementary recordings in the "I Can Hear It Now" series and deal with the problems of the Middle East and the Suez area. They are "I Can Hear It Now—David Ben-Gurion" (Columbia Records, ML 5109) and "I Can Hear It Now—Gamal Abdel Nasser" (Columbia Records, ML 5110).

Many teachers are using these albums in classrooms and also recommending them for home study. Each ZODIAC album includes 3 unbreakable hi-fi 33 1/3 rpm LP records, together with the text and translation, delightfully illustrated.

# Audio-visual trade review

by ROBERT E. SCHREIBER

## NEW EQUIPMENT

The following announcements of recent releases are based on information supplied by producers and distributors. Audio-visual materials of all kinds are listed under the some general subject headings. The producer or primary distributor for each item is indicated by an abbreviation of the name. Addresses of such primary sources are given in the Index to Primary Sources at the end of this department. For more information about new materials, use the Service Coupon in this section.

### MOTION PICTURE PROJECTORS & ACCESSORIES

**Busch Cine Educator Rear Projection Machine.** A rear-projection motion picture outfit for showing classroom films from the front of the room without room darkening. The screen is 16" x 23". Screen, speaker, and projector are mounted on an easily movable unit only 29" wide mounted on heavy duty industrial casters.  
For more information circle 119 on coupon

**Ideas Electrict** \$7.50 in the four foot size. An over-the-floor electrical extension cord useful for schools, workshops, and audio-visual departments where an electrical outlet is needed in the middle of a room. One end is plugged into wall outlet and other end has a duplex receptacle. Ribs on the under side prevent slipping and the enclosed wiring is safe from moisture. Also available in 5, 6, and 10 foot lengths.  
For more information circle 120 on coupon

**Radiant Lens Bracket for Superama 16 Available** \$22.50. Brackets to fit Bell & Howell, Ampro, and Victor arc projectors are now available. The Superama 16 lens is used for taking and showing anamorphic wide-screen motion pictures.  
For more information circle 121 on coupon

### SOUND EQUIPMENT

**Bogen Public Address Amplifiers.** The Flex-Pak line "L" series feature constant voltage output taps, special speech filters, equalized phone inputs for all cartridges, separate bass and treble controls, plug-in sockets for low impedance transformers, identification strips for all channels, and leather carrying handles. The "LX" series features, in addition, anti-feedback control and built-in remote gain-controlled circuit.  
For more information circle 122 on coupon

**Califone Promenade Model 25V-8.** \$189.50. Combines features of the Commander and Professional models in a complete portable sound system having single-unit portability, 24-watt amplification, dual 12-inch speakers, continuously variable speed, cushioned spring rubber feet to eliminate floor vibration, and separate tone control on the microphone input.  
For more information circle 123 on coupon

**Gates Dualux Speech Input System.** A Broadcasting console incorporating cue selector to all major circuits for direct panel speaker audibility, eight utility keys for expansion, 14 inputs to four mixing channels, three-position high-pass filter for quick program correction, PBX key control of all channels, five preamplifier mixing channels wired for seven microphones (handles 22 microphones with utility keys), complete inbuilt cue-intercom with front panel listening and talk-back, cue-attenuators on four mixing channels.  
For more information circle 124 on coupon

**Miles Walkie-Recordall Recorder Improved.** Self-powered — no wires or warm-up period — no exposed microphone. Completely noiseless operation. Picks up and records voice within 60-foot radius screening interferences such as typing, coughing, air-conditioners, etc. Also adjustable for close-talking purposes. Provision for start-stop by voice activation. Records on non-flammable safety-film belt.  
For more information circle 125 on coupon

**Reeves Soundcraft Tape Spooled on Quick-Thread Reels.** All five and seven inch reels of recording tape are now being supplied on a new "Quick-thread" reel designed to provide easier, faster loading of recording tape. Tape is inserted in slot which extends from the hub to the outer edge of the reel, guiding it into position with a minimum of manipulation. Reel also lends itself to finger-loading.

mined effort to develop courteous habits by constant practice with the help of the group—until he can be courteous automatically. Pri.

**For more information circle 154 on coupon**  
**Kid Brother** mp MHFB 25min sd b&w \$145. Explores some of the hidden emotional forces that lie behind excessive drinking. Reveals that behavior problems which appear on the surface to be concerned with alcoholism may, in young people, be an expression of the many difficulties that adolescents face in adapting to the world around them. The film also depicts the social pressures that are put on young people to take a drink—both by their own group and by adult example.

**For more information circle 155 on coupon**  
**Stress** mp MH 11min sd b&w \$60. Based on Dr. Hans Selye's theory that stress is a general alarm reaction through the pituitary and adrenal glands which is set off by an attack on the body through disease, injury, or emotional tension. He shows some of the experiments which led him to his discovery and discusses the progress being made in combating disease with hormones.

New audio system in  
Bell & Howell  
magnetic recording projector

**New FILMOSOUND 302-E has 50% more output—  
high fidelity response—at no increase in price!**

Bell & Howell pioneered low-cost sound movies through magnetic recording on film with the Filmosound projector. Now the new 302-E (Bell & Howell's third magnetic model) introduces still more improvements that add the thrill of hi-fi sound to your 16mm films.

Its powerful 15-watt amplifier has 50% more output. The wide-range frequency response — like an expensive high fidelity instrument—will reproduce any sound in the audible range. Microphone sensitivity has been tripled. An additional "peak" indicator light and automatic switching of input circuits help to make recording even simpler.

The Filmosound 302-E not only enables you to create and enjoy top-quality sound movies — it also brings out the best in magnetic tracks previously recorded! And, of course, you get brilliant, sharp projection of either

optical or magnetic sound films. The 302-E is lighter in weight, easier to operate — all at *no increase in price!*

**\$100.00 trade-in bonus!** For a limited time, your old projector is worth *\$100.00 more* than its "Blue Book" value when you trade it in on a versatile, new Filmosound 302-E. And your Bell & Howell dealer will soundstripe up to 400 feet of your favorite 16mm film *absolutely free* — just to demonstrate 302-E performance.

See your dealer today! Or write Bell & Howell, 7117 McCormick Road, Chicago 45, Illinois.

## Control Overhead Daylight with LEVOLOR Skylight Blinds

**instant control at your fingertips**

Many schools are being built today with skylight domes to allow a natural entrance of the sunlight. For Audio-Visual purposes this sunlight must be controlled.

Levolor Skylight venetian blinds can be controlled manually, but the greatest advantage lies in motorizing these blinds. You just press the button and the room is instantly changed from maximum light to a soft diffused light—or maximum darkness, whatever the instructor prefers.

This type of Levolor Audio-Visual Blind is called the LEVOLOR SKYLIGHTER.

For full details and specifications of the LEVOLOR SKYLIGHTER and other Levolor Blinds write to LEVOLOR LORENTZEN, INC., A-V Dept., 720 Monroe Street, Hoboken, N. J.

*Be sure to specify*

# DON'T DISCARD DAMAGED SLIDEFILMS F & B FILM REPAIR and SPlicing BLOCK

Only \$19.95

SAVE YOUR TORN, BADLY DAMAGED, GOUGED Slidefilms and movie films. Replace torn and missing sprocket holes. They can now be repaired speedily, efficiently, economically and PERMANENTLY—by using the F&B Film Repair and Splicing Block in conjunction with the Magic Mylar Transparent Splicing Tape.

Here's how bad tears, and missing perforations can be repaired.

The F&B Film Repair and Splicing Block provides a solid base registration of the sprocket holes so that the Mylar Splicing tape can be applied accurately on both sides of the film.

Also, the block is used for strengthening conventional lop splices—and to make butt splices. The upper channel comprises a complete splicing block for 1/4" magnetic recording tape. The F&B Film Repair and Splicing Block is made of precision milled anodized aluminum. The block is completely non-magnetic. Magnetic—or magna-striped film may be repaired in perfect safety.

For schools, colleges, industry, government, film and slidefilm libraries, projection rooms, for all users of film—the F&B Film Repair and Splicing Block is a prime necessity, made available by mass production at the unusually low price of \$19.95.

—Order Yours Now for Earliest Delivery—

- CLEAN** ● Self-Sticking—No Cements Required
- DURABLE** ● Tear Strength Greater Than Film
- SAFE** ● 1/1000" Thick—Passes Thru Projector Easily
- INVISIBLE** ● Optical Transmission of Spliced Frames Unaffected
- ECONOMICAL** ● No Frame Loss When Repairing Torn Film or Perforations

## Magic Mylar Transparent Splicing Tape

16mm SINGLE OR DOUBLE PERF at \$5.00 per 66 ft. Roll (2640 frames)  
35mm at \$9.00 per 66 ft. Roll (1056 frames)

## COVER: New Harper Textbook

This month's cover shows a selection of full color illustrations gleaned from the new audio-visual textbook, "Audio-Visual Materials: Their Nature and Use" by Walter Arno Wittich and Charles Francis Schuller, under the advisory authorship of John Guy Fowlkes. (See listing under Helpful Books, page 317.) Publishers of the textbook are Harper & Brothers, 49 E. 33rd St., New York 16, N. Y. Pictures are from the Encyclopaedia Britannica Films productions.

## Too Good To Miss

Since we aren't running a "Letters" page in this issue, and since we didn't want to pass up passing these on . . . we've just purloined a part of *this* page for them.

Editor: Enjoyed your dip into Dorris' text . . . one of the first books I ran across and I agree still one of the best. Also this points up the usual thirty-year lag between ed. leadership and field action, rather well, from publication of Dorris to today.

Henry C. Ruark, Jr.  
Director of Information, NAVA

Editor: Congratulations for your *Tribute to a Pioneer* editorial in the May issue.

My only cherished copy of Anna V. Dorris' book disappeared one summer session at Northwestern University when I was loaning my private library to students enrolled in the class. It was the only book that had ever been stolen from me. Another tribute to Anna V. Dorris.

Stanley McIntosh  
Motion Picture Association  
Washington, D. C.

Ed. Note: Maybe the person who bor-

rowed Stan's copy will return it! Or maybe someone else has two copies and will get in touch with him.

## S.O.S.

The Film Council of America, now in its 11th year, is currently operating without any foundation subsidy. It is appealing for industry and individual support to continue the activities that have proved of solid benefit to the non-theatrical field, including the annual Film Festival, and to entries in festivals abroad, the Central Film Information Service, The Public Library Film Circuits, and the publication of its RECENT FILM RELEASES and its newspaper RUSHES. Immediate payment of membership dues and an emergency contribution of \$10.00 each from individual members by July 1st, is counted on to tide over the organization's move to a self-supporting basis.

Its new Board of Directors is now composed of people directly concerned with the growth and progress of the nontheatrical film, and the "Advisory Councils" provided under its recently revamped constitution are already drawing into active cooperation a good many more workers directly concerned with specific fields of film use. Address Film Council of America, 614 Davis St., Evanston, H. A. Tollefson, Pres.

## See You In July

Don't forget, we'll be meeting you again in the pages of our new July Issue this year. And we're looking forward to meeting you all in person at the NAVA Convention and Trade Show at the Morrison Hotel. The theme, you know, is to be "Public Relations," but we feel good personal relations are the basis of public relations.

—GM

# How many of these Pageant benefits exceed *your* present specifications?

**1. Simple setups**—Folding reel arms, in-place drive belts, film path printed on the projector, plus new spring-loaded snubbers make it easy for anyone to put on a good show. And single-switch reversing lets you start at the opening frame, rerun important scenes for emphasis.

**2. Minimum maintenance**—Lifetime lubrication for the Pageant takes place at the factory. For you it means an end to costly and disrupting breakdowns due to improper lubrication, the most common cause of projector difficulty. You can be sure your portable Pageant is ready for use when you want it.

**3. Bright screen pictures**—Brightness of the projected image reaches a new level with the Pageant's fine optics and Super-40 Shutter. At sound speed, a 2-bladed shutter mechanism automatically projects 40% more light than standard shutters . . . permits long "throws" and large screen images.

**4. Sound fidelity**—The Pageant offers a simplified fidelity adjustment which permits making the most of every sound track, regardless of position or condition. It also has tone and volume controls for precise, comfortable sound and a well-baffled speaker for full frequency response.

## NOW... the Kodascope Pageant Magnetic-Optical Projector (Model AV-104M)

Add *your own* sound, change it to fit changing needs. Do it easily, economically. This is really two machines in one—first it's a fine projector for showing 16mm films—silent or sound, with either optical or magnetic sound tracks. And it's a precision recording instrument, too. With it you can add sound to silent films, add personal narrations, mix music with narration, add a foreign language version to your English language sound films. You'll find *endless* uses for this new educational tool. Discover the *many* ways it can help make ALL your film programming more effective. Your Kodak A-V Dealer will demonstrate it. Or send for a free brochure giving full details.

For a preliminary evaluation, send for this free brochure. No cost or obligation, of course.

Visit your nearest Kodak A-V dealer for a full demonstration of the Kodascope Pageant 16mm Sound Projector's merits. See, hear, and learn how and why the Pageant takes the "project" out of projection. Choice of 3 models—one to match your 16mm projection needs exactly.

# Have you heard?

## CBS Television Wins Two National Scholastic Film Awards

CBS Television's "You Are There" series and the "See It Now" program, "The Vice Presidency," received two of the ten National Film Awards given annually by the Scholastic Magazines to the outstanding films in the educational field at presentation ceremonies May 7, at the Advertising Club of New York.

Winners of the Scholastic Film Awards are selected by a panel of 40 educators across the country who, this year, screened more than 300 films in actual classroom use.

The "You Are There" Award was the first ever made to a series. Each film in the series re-creates an important event of the past through modern on-the-spot reporting techniques. The series also recently won the Peabody Award in the Television Education classification.

"The Vice Presidency," produced for CBS Television's "See It Now" series by Edward R. Murrow and Fred W. Friendly, studies the rights and duties of the Vice Presidency and the men who served in this office. Last week, "See It Now's" "Report From Africa," won the Golden Reel Award of the Film Council of America in the International Understanding category.

## Optical-Magnetic Sound Track At SMPTE Meet

A demonstration of a transparent magnetic sound track highlighted the exciting session on Sound Recording and Reproduction that closed the 81st Convention of the Society of Motion Picture and Television Engineers which met at the Shoreham Hotel, Washington, D. C., April 29-May 3.

Other discoveries and developments pointing to revolutionary changes in the motion picture and television industries which were described at the session included the new film used by CBS in its television news production, the revised projector developed by Eastman Kodak for use with the new magnetic soundtrack, and RCA's adaptation of 16mm television-film projectors for magnetic sound reproduction.

The papers presented at this session point clearly to the further development of bilingual soundtracks. The new direction which research seems to be taking has obvious implications in the areas of economics and politics.

A paper by George Lewin of the Army Signal Corps described his discovery of a method for reproducing an optical track even when completely covered by a magnetic track. This means that it will no longer be necessary to resort to half-width tracks when combined optical and magnetic tracks are required.

The main objection to half-width tracks is that they result in loss of quality in both magnetic and optical sound and, as a consequence of the uneven head wear maintenance costs are increased.

Some of the applications of this discovery would be in the field of regular 35mm theater release prints as well as multi-language prints in both 35mm and 16mm gauge, Mr. Lewin said. He stated that relatively minor modifications of most present day equipment would be necessary and that most military projection equipment requires no modification.

Like most discoveries this one came about in an "accidental" fashion. "I unexpectedly and to my complete surprise, discovered that under certain conditions the magnetic strip has been transparent all the time," Mr. Lewin said. The discovery came about following the installation of a Reeves 16mm striping machine. In making the test roll, the half stripe was improperly placed and covered the optical track. Mr. Lewin decided to run the test roll through on a projector equipped for optical sound only to hear how badly it would sound. "To my amazement," Mr. Lewin said, "the optical track sounded quite normal."

The projector Mr. Lewin was using at the time he discovered this is one which is fairly standard in military installations, known as the Jan Spec. One of the unique features of this projector is that it uses a lead-sulfide photoconductive cell in place of the more common caesium photo-electric cell. One of the principal features of the lead-sulfide cell is that it is much more sensitive to infrared light than

the caesium cell. The iron-oxide magnetic stripe is evidently highly transparent to infrared light, so that while it looks opaque to the eye the lead sulfide cell can look right through it and see the modulation of the optical track, Mr. Lewin explained.

## Now You Can Study Piano Via Television

SAN FRANCISCO, CALIF. — A beginner's course of 13 piano lessons will be offered to television viewers in the Bay Area starting the evening of May 2, from 7:15 to 7:30 P.M. on KQED, Channel 9. Called "Recreational Piano," the weekly film series has been supplied to KQED by Sherman, Clay & Company as a community service.

For 15 minutes every Thursday evening, Dr. George C. Stout, Professor of Music Education at the University of Houston, Texas, will conduct televised piano lessons according to a new, proved class piano instruction technique he developed.

Even those who do not have a piano in their homes can benefit from the lessons by using a cardboard keyboard.

## Public Relations Convention Theme

Public relations for the audio-visual field will be the theme of the 1957 National Audio-Visual Convention and Exhibit in Chicago July 20-23.

"It is easy to see that the general public lacks a clear understanding of the tremendous impact audio-visuals are having in education, industry, and the religious field," William Birchfield, convention chairman, said. "We feel that the audio-visual dealer and salesman has a responsibility as well as a real opportunity in building this understanding. Our convention program is designed to teach basic public relations know-how to our people, for use right down at the grass-roots local level."

## A.V.C. Meets In N. Y.

Summer Meeting of the NEW YORK AUDIO-VISUAL COUNCIL will be held in Albany, New York, July 11-13, 1957. In addition to business meetings and panel discussions by members of the professional staff of

# Flick!

Carle Place High School, Long Island, N. Y.

## *Flexalum*® Audio-Visual Blinds turn a sunny classroom into a dark auditorium instantly!

*Light without glare . . . complete ventilation, too.*

Now, both new and old classrooms can be equipped for modern audio-visual training at a cost well within school budgets. The new Flexalum Audio-Visual Blind permits the most precise adjustments for any desired light condition—from bright daylight to darkness for opaque projection. It frees the auditorium or multi-purpose room for other uses. Its original cost is competitive with less versatile window treatments, and its service life is far longer, making it the most economical buy in the long run.

Flexalum's complete light control is

achieved by a new special design that permits greater overlapping of slats and much tighter closure than has ever been possible before. Channels at the sides, top and bottom of the blind prevent light infiltration around the edges. Complete satisfaction is assured by the Flexalum Audio-Visual Blind's 5-year Guarantee.

**CLEAN YOUR FILMS**  
**THE SAFE WAY**  
**THIS SUMMER**

in the death of a technician's association this tragedy

**CARBON TET PROVES FATAL!**

Carbon tet poisoning has been listed as a contributory factor in the recent death of a film editor. Following this tragedy, the National Association of Broadcast Employees and Technicians has launched a determined drive to ban the use of carbon tet as a film cleaner. "Carbon tet can poison," the association warns. "If you're using it, better switch to another product!"

ides the f...

**Switch to NON-TOXIC**  
**ECCO #1500**  
**Anti-Static Film Cleaner**

- Cleans Better, Dries Faster Than Carbon Tet
- Cleans, Conditions, Lubricates Film in One Operation
- Non-Poisonous — Non-Flammable
- Stops Dirt-Attracting Static
- Fast-Drying
- Conditions "Green" Prints, Kine Films
- Keeps Films Pliable, Eliminates Waxing
- Fewer Cleanings Needed
- Absolutely Safe for Film, Personnel

Don't risk the health of your personnel — stop cleaning film with deadly carbon tet! Start using ECCO #1500, the anti-static film cleaner that contains no poisonous carbon tet . . . cleans, conditions and lubricates in one application!

ECCO #1500 is the film cleaner used in most audio-visual centers, film libraries, schools and colleges. And ECCO #1500 is used by many Hollywood film studios and TV networks — NBC, CBS.

Discover for yourself that it pays to clean film as the industry's leaders do — with ECCO #1500.

 60-E Franklin Street, East Orange, N. J.

the State Education Department, the program includes various Field Trips.

**N.E.T. Finds Permanent Home**

ANN ARBOR, MICH. — The Educational Television and Radio Center has moved into its modern new building in Ann Arbor, a move which gives National Educational Television its first permanent home. N.E.T. is the youngest TV network, linking together the 23 non-commercial stations.

Main offices of the Center have been located in Ann Arbor since the national organization's inception, but expansion of activities during the past year resulted in the decision to build more permanent quarters. The Center had rented a small building previously.

Though the Center is not equipped for live production or broadcast, the new building has a small closed circuit television installation. Through this installation, films can be put on a film chain, or TV projector, and relayed over special TV receivers in other parts of the building. All films distributed by the Center, amounting to about 4,000 per year, are screened and edited by staff members. The closed circuit installation will greatly expedite this work.

**Wide Diversity in Audio-Visual Archives**

The wide diversity of materials and methods used in audio-visual education is well illustrated in a single shipment of accessions by DAVI Archivist, William F. Kruse, to augment the collections housed at the State University of Iowa.

There is, for instance, a glass lantern slide to fit the Edison Home Kinetoscope already in the archives by gift of the Victor Animatograph Corporation. Included also is a collection of two score hand-colored stereographs, by veteran producer George E. Stone, and a very early SVE Picturol filmstrip set on "What It Means to Be a Christian," obviously taken from still earlier McIntosh Co. glass slides. A collection of 21 film and filmstrip catalogs is being added to several already at the university, the oldest two, dating back to the '20s, coming back "home" as a gift, arranged by Forrest Alter, from the World Council on Adult Education, in London, England. These are the filmstrip catalog of the Spencer Lens Company, and the film and filmstrip catalogs of the University of Kansas, 1928. By contrast, this shipment included also the current school demonstration LP record and catalog of the Columbia Records Co., and two remembrance tapes by AV veterans. Contrast again, three financial account books by DVI secre-

taries spanning the 1938-1945 period from Don Carlos Ellis to Vernon Dameron. There are as yet relatively few photographs in the archival collections but this shipment makes a good start with about 40 stills dealing with World War II armed forces film production and utilization, plus a good dozen photographs of AV events from B. A. Aughinbaugh and from the personal collection of the archivist. Finally, there are even a couple of original scripts of the instructional films produced in the American Council on Education project, under grant from the Motion Picture Association of America.

While this diversity does not hold for every shipment sent to the university, it does give some idea of the scope of the materials that are being assembled for future researchers and historians. Anyone having materials thought suitable for inclusion is invited to correspond with Wm. F. Kruse, 45 Ingleside Shore, Ingleside, Ill.

**"Merit" Scholarships**

CHICAGO — "Like a free ticket to the best of training" was the description for scholarships to the Ninth Annual National Institute for Audio-Visual Selling, applied by Al Hunecke of the DuKane Corp., St. Charles, Ill., chairman of the Institute Scholarship Questionnaire. Hunecke announced the scholarships to the Institute, held annually at Indiana University, Bloomington, through cooperation of Indiana University and the National Audio-Visual Association.

The Institute meets this year from July 14-18.

"Four days of the highest kind of sales and a-v training, working with the top men from all phases of the industry—that's what these scholarships represent," Hunecke said. He explained that the scholarships are sponsored by Advisory Members—manufacturers and suppliers of AV equipment and materials—of NAVA.

The scholarships are awarded on a merit basis, using a questionnaire instrument, Hunecke said. The questionnaire, in two parts, deals with the National Sales Institute and with a series of suggestions for discussion or "buzz" topics at the Institute. Answers to the questions and selection of topics are rated by the faculty of the Institute at Indiana University, under the direction of Dr. K. C. Rugg of the Audio-Visual Center.

# DU PONT INTRODUCES

## TONTINE<sup>®</sup> flame-resistant vinyl drapery material for darkening and decorating classrooms

Now you can specify an opaque drapery material that complements the décor of rooms used for audio-visual work. "Tontine" flame-resistant vinyl drapery material comes in a selection of attractive patterns and colors on its textured side (see diagram) and in neutral beige on the smooth side facing the window. Soft and pliable, drapes of this new fabric gracefully draw up into minimum space after use. And there's no "boardiness" in low temperatures, or "tackiness" in high.

### EXCELLENT SERVICE ADVANTAGES

Although Du Pont "Tontine" is of a weight and softness designed to drape gracefully over large expanses, it withstands rough handling and possesses balanced resistance to deterioration, discoloration, shrinking and stretching. Its flame-resistant characteristic is equal

to that of "Tontine" triplex window shade cloth, which has passed every governmental test it has undergone. For free samples and specifications, mail coupon below.

Cross section of "Tontine" drapery material

*Base fabric is high-grade cotton, coated with virgin vinyl resins formulated to impart permanent flame resistance. Black pigmented vinyl gives opacity. Vinyl coat on one side has embossed textile design.*

segment in the Middle East, reports enthusiastically about results obtained in local production of educational films by use of pre-stripped magnetic recording film. Mr. Spurr and an assistant produced nineteen educational films, in one case turning out an eight-minute newsreel in four working days that under other production techniques and locally available facilities would have taken a month or more to do. "The magnetic striped film," according to the official UNESCO report, "developed on the spot, enabled Mr. Spurr and his assistant to produce sound films with music, commentary, and lip-synchronized dialogue with no sacrifice in basic quality and with a tremendous gain in speed."

### A-V In India

"Indian Education Abstracts," quarterly published by the Government of India's Ministry of Education, lists a number of papers that have appeared in that country on A-V topics. The titles parallel our own principal concerns: "what every teacher should know about projection," The Blackboard, Model-making, Models in the teaching of Geography, Demonstration techniques, the Educative value of a zoo, and Audio-Visual aids to education. The last named represents the

inaugural address to the Indo-Australian Seminar on Audio-Visual Aids to Education, by Har Govind Singh, at Lucknow, 1955.

### French Film Cycle Announced

The program for "Sixty Years of French Film," which will be presented at the Museum of Modern Art, 11 W. 53 St., New York 19, from May 29 through September 30, was announced on Monday (April 29) at a reception at the Museum held in honor of Mr. Jacques Flaud, head of the French Government's National Center of Motion Pictures. The cycle, which is the largest commemorative film cycle ever presented in the United States, will be presented jointly by the Museum's Film Library and by the French Film Office in New York, representing the Centre National de la Cinematographie and Unifrance, the French association of film producers.

### Announcement

The International and Universal Exhibition of Brussels 1958 organizes an INTERNATIONAL EXPERIMENTAL FILM COMPETITION to which it invites all independent filmmakers throughout the world to enter their production. Two Grands Prix will be given to the two best experi-

mental films, the first of which will receive a gold medal and a sum of 500,000 Belgian francs (about \$10,000) and the second a silver medal and a sum of 250,000 Belgian francs (about \$5,000). Films entered may be either in 16mm or in 35mm, black-and-white or in color, sound or silent.

A regulation-leaflet will be sent, as well as any further information, by request to the Cinematheque de Belgique, Palais des Beaux-Arts, Bruxelles, Belgium.

### Closed Circuit in Atlanta

The public schools of Atlanta, Georgia, begin an important experiment in September. The board of education will operate an ultra high frequency TV station, which will broadcast closed-circuit TV programs to classes within the school system.

First thing Supt. Ira Jarrell had to do was to assure the staff "that no teacher will be out of a job as a result of the experiment." Miss Jarrell said that the number of new teachers needed in the system may be cut down slightly if the experiment succeeds. Atlanta has studied the closed-circuit broadcasting being carried out in Hagerstown, Md., and has been "impressed by it."

### Item in the News

All administrative and manufacturing functions of the Victor Animatograph Corporation have been transferred to Kalart Company headquarters in Plainville, Conn., as a result of the affiliation of Victor as a division of the Kalart Company.

### Tours to Washington

Is there enough "education" in those high school senior education tours of Washington?

The U. S. Office of Education is trying to determine the answer to that question. It plans to use this summer's student tours as a laboratory, observing itineraries and planned programs by students and their teachers.

"Some of the student tours to the nation's capital have become little more than sightseeing junkets," says a USOE spokesman. The Federal agency is interested in finding ways of impressing the young visitors to Washington with the fact that "what happens in the capital has a direct bearing on their lives back home."

In addition to observing the tours, USOE's researchers plan to consult educators on their own experiences with student visits to Washington.

The new research project stems from the fact that organized student visits to Washington in recent years have become tremendously popular. Bus-

### Word About Workshops

The University of Oklahoma, Norman, Okla., is to hold a workshop in Graphic Materials Production, June 17-28, culminating with the 18th Annual Audio-Visual Conference. For information, write John J. Long, Coordinating Director, Educational Materials Services.

Two three-week workshops are being held at Elmira College, Elmira, N. Y., as follows: June 24 - July 12: Methods and Materials of Audio-Visual Instruction and July 15 - August 2: Evaluation of Audio-Visual Materials. Each of these workshops will carry three semester hours credit. They will both be taught by J. Gerald Loughlin, Director of Audio-Visual Instruction, Elmira Public Schools and Instructor at Elmira College.

The Summer Session is a resident one and is designed primarily for students who live within commuting distance of Elmira. The tuition is \$22.50 per semester credit hour or \$67.50 per workshop.

### Well Deserved Appointment

Philip Lewis has been appointed director of the Bureau of Instructional Materials of the Chicago Public Schools. As of August 1st Dr. Lewis will have supervisory charge over the Visual Education, Radio - Television, and Library Divisions, and jurisdiction over all textbooks bought by the Board of Education. Aside from his service to *Educational Screen & AV Guide* as Technical Editor, he has been a classroom and TV science teacher, instructor of AV training classes and Dean of Education at Chicago Teachers College, and, at present, is principal of the Herman Felsenthal Elementary School. Dr. Omer Williams, former dean of Chicago City Junior College, and present Director of Instructional Materials, is moving up to the post of District Superintendent.

## DUOLITE—gives dual protection

1. On regular screens, in darkened rooms
2. On built-in screen for lighted rooms

### WITHOUT A PRICE PENALTY

When you look at 16mm projectors for your school, look especially at TSI Duolite — for this economy reason:

Duolite gives full DeVrylite quality projection on large screens, in the usual way, in darkened rooms.

**Duolite ALSO gives TV-size projection, on its own built-in screen, for use by small study groups in un-darkened rooms.**

You pay little, if any, more. The TSI Duolite is competitively priced.

### How is this possible?

Duolite has the 40-year-proved DeVrylite mechanism. And TSI builds nothing but 16mm sound and silent projectors for educational and industrial use. Such specializing saves you money.

Why not ask for a demonstration? Use of the coupon below will not obligate you in any way.

Livonia, Michigan

Please have your dealer get in touch with me to demonstrate the TSI Duolite. I understand that this does not obligate me in any way.

NAME .....

ADDRESS .....

CITY AND STATE .....

offering many practical applications. Notable is an even greater and more discriminating use of illustrations; there are many new pictures, and numerous diagrams have been redrawn. A greatly increased and very effective use is made of color where this makes a definite added contribution to better understanding. Pictures have generally been updated: the steam locomotive is banished, maps measure distances in "jet time," and space rockets now launch the chapter on still projection. Banished also are the obsolete tools such as wire and disc recorders for classroom use, and equipment illustrations include very recent model changes and

such timely developments as magnetic sound. The tackboard has been merged into the treatment of study displays, and the chapter on teaching by radio has become generalized as part of "Audio - Learning Experiences." Television is treated only in its educational and commercial broadcast aspect.

Textually there is little basic change, the book remains a solid, authoritative, thoroughly usable work for both classroom and reference purposes. There is a new introduction, a new preface, numerous short new approaches to the various chapters. Source lists have been expanded and chapter bibliographies

are enriched by addition of considerably more projected material.

The first edition was a fine useful book, the second is even better, especially pictorially. Anyone interested in textbook illustration and in flat pictures generally may find it profitable to compare the two editions picture for picture to analyze the considerations that may have motivated the authors in making the changes.

— *Wm. F. Kruse*

## People in the News

NEW YORK, April 25, 1957 — Helen Parkhurst, distinguished educator, child psychologist and broadcaster, has been appointed an officer in the Order of Orange Nassau by royal decree of Queen Juliana of The Netherlands, in recognition of her founding the international Dalton Plan for education.

The insignia of the Order were presented to Miss Parkhurst today by Hubert van Rijkevorsel, Consul General of The Netherlands, at the Consulate General in New York.

ANN ARBOR, MICH., May 13—Dr. Herman B. Wells, president of Indiana University, was recently elected for a five-year term to the Board of Directors of the Educational Television and Radio Center. He began his service to the University as a professor of business and later served as dean of the School of Business.

In addition to his work as an educational administrator, Dr. Wells has served the U. S. Government on two missions abroad. He was a member with ministerial rank of the Allied Missions for Observation of the Greek Elections and was the first advisor on cultural affairs to the military governor of the U. S. occupied zone of Germany.

The Audio Visual Coordinators Association of Minnesota met at the Lemmington Hotel, Minneapolis, Minnesota for its Annual Spring meeting. New officers were announced for 1957-58.

President — Robert Schultz, Audio Visual Director, Rochester Public Schools.

Vice-President — E. Dudley Parsons, Audio Visual Director, Minneapolis Public Schools.

Secretary-Treasurer — Wesley J. F. Grabow, Audio-Visual Materials Advisor, University of Minnesota.

Plans are being made to host the DAVI convention in April of 1958, which will be headquartered in the Lemmington Hotel, Minneapolis. The committees already in action are planning many unusual program events, field trips, and inviting smorgasbord.

V-M tape-o-matic Model 711.  
Two-tone gray leatherette. \$209.95\*

*A NEW Sound, A NEW Effectiveness for Your Audio Program!*

## ✓ M TAPE-O-MATIC®

A Complete, Professional-Quality Tape Recorder that also plays STEREOGRAPHIC TAPES! It obsoletes none of your present equipment—pair it with your present radio, phonograph or any other amplifier-speaker system for the awesome, all-enveloping sound of stereo music. Many high fidelity recorded tapes, monaural and stereophonic, are available to enrich your audio program. Because tape-o-matic is a complete tape recorder, not just a tape player, it's a versatile educational tool of high effectiveness. Record from any source of sound for monaural play-back. Top recorder features at a popular price. You can even use it as a small P. A. system, too!

# TOO MUCH ENTHUSIASM

We think that Alexander J. Stoddard is letting his enthusiasm for educational television carry him beyond the bounds of good judgment. Without providing any evidence or justification, he is telling the American people that "no new elementary school should be built today without a television studio and closed circuit apparatus and connections for telecasting to all parts of the building and play spaces." That's going just too, too far at this stage in the development of educational television!

Dr. Stoddard is one of the nation's most prominent educators. He is the former Superintendent of Schools from several cities including Los Angeles and Philadelphia. He was for many years Chairman of NEA's Educational Policies Commission. He now is apparently writing and speaking under the sponsorship of the Fund for the Advancement of Education. His words carry weight and authority. We think he should be more careful with them.

We read and re-read Dr. Stoddard's brochure, published by the Fund, "Schools for Tomorrow: An Educator's Blueprint." We've heard him speak on the same subject. He offers no blueprint, however, for what to do with closed circuit television equipment. He makes no specific suggestions for its use. He produces no evidence whatsoever to justify the installation of such equipment. He just tells you to put it in every school. Apparently he is depending upon his fine reputation and his eloquence to persuade people.

We hope that people will not be persuaded that way; and in saying this we hope we will not be accused of being opposed to educational television. We know as Dr. Stoddard does that "television is a powerful means of communication." We know

that all over this country there is extensive experimentation in the educational uses of television. Schools and school systems are applying closed and open circuit television to the solution of educational problems. They're using both commercial and educational stations to transmit educational programs. The educators of this country are seriously trying to find the answers as to just how television can best be used for education.

So far as we know, however, there is absolutely nothing in the experience to date that would warrant the sweeping demand that a television studio and closed circuit facilities be built into every new elementary school.

It must be Dr. Stoddard's enthusiasm and feelings that cause him to jump so far to his conclusions. He should have read his own brochure more carefully and thought about it. He would have read on page 27 that it "is not definite or certain at the present time" what part television can play in the process of education. He would have read on page 43 a proposal calling for experimentation to determine how television can be used at the elementary school level. He would have read on page 57 that the final big question was whether or not the schools could develop the potentialities of television "to justify its widespread installation." In the light of these uncertainties, and in the light of all that we yet do not know about educational television, Dr. Stoddard's conclusions just do not make sense.

Many times we've heard Ralph Steetle of the Joint Council on Educational Television declare that educational television was such a great and important idea that it would survive its enthusiasts. We sincerely hope it will.

*Paul C. Reed*

The Henry Ford  
Museum,  
Dearborn, Michigan

Producer-Writer Marion Corwell is shown as she opens her own television program, "Window to the Past."

# bringing LIVING AMERICAN HISTORY to the CLASSROOM

by Marion E. Corwell

Television Coordinator — Henry Ford  
Museum & Greenfield Village

Detroit area elementary students are gaining a deeper appreciation of their American heritage as a result of a unique attempt to combine the facilities of the newest mass communications medium with the resources of one of the country's outstanding museums.

At 2:30 every Tuesday afternoon during the school year, teachers and students, as well as many community groups in the metropolitan area, gather around their television receivers for a meaningful educational experience. What they see and hear during the next fifteen minutes is a presentation of the Henry Ford Museum and Greenfield Village called *Window to the Past*.

Planning of the series began in the summer of 1955 in anticipation of the inauguration of Detroit's own educational station, WTVS. As a charter member of the Detroit Educational Television Foundation, composed of 18 educational and cultural organizations in Detroit, the Museum, its officials felt, had a definite responsibility to do its part in contributing to the station's program schedule.

To formulate plans for the series, a television committee was designated composed of the director of education, audio-visual coordinator, manager of research and information, and the television coordinator, who was appointed chairman. It was the responsibility of this committee to determine the general purpose and format of the series, select the respective titles, and decide the nature of the content, intended audience, length of each presentation, and musical theme. After reaching general agreement in regard to the basic principles, policies, and

procedures, the committee was disbanded and the responsibility fell upon the television coordinator for the actual planning, writing, and producing of the program series.

The *Window to the Past* programs are designed especially for in-school viewing and aimed particularly at elementary students in grades three through six, although the content appeals to a wide range of interests and grade levels, as well as to adult viewers. Each program in the series features a subject taken from our nation's history. The individual programs are not based upon specific units of study in the various conventional fields of subject matter, but rather each is a self-sufficient entity on a significant topic in American history.

Basically, each telecast in the series features the story teller who appears on every program to tell the story of what is on the other side of the *Window to the Past*. The story teller is aided by Museum resource

Lighting is explained to WTWS storyteller.

specialists. Museum objects, miniature properties, film clips, and special effects. Through the use of a "magic clock," viewers go back a century or two and see events and conditions typical of the America our forefathers knew.

Objectives of the program series are five-fold:

1. To present authentic, factual information in an interesting manner.
2. To make the study of American history more meaningful.
3. To contribute to the building of better citizens among tomorrow's adults.
4. To expand the horizons of the social studies curriculum by showing the events and people who contributed to our nation's growth.
5. To share the American history collections of the Henry Ford Museum and Greenfield Village with an ever-increasing number of teachers and students.

In planning the series, it was necessary to consider the educational nature of the materials on display in the Museum and Village, and to determine the most effective way of utilizing television to present these materials. Since the Museum and Village are primarily showcases of American history, it was natural that the programs should be designed to tell the story of America's past, as depicted in the Museum and Village resources. Actually, the objectives of the Museum and Village are included in the objectives of the program series—to show how Americans have lived and worked, from early colonial days to the recent past, and to tell the story of their inventions and accomplishments.

Any educator who has toured the Museum and Village cannot fail to

realize the tremendous potential this dual institution affords for television program material. With over ninety historic buildings which typify the America of yesteryear, the Village is a natural setting for remote telecasts and it has been used for this purpose on four occasions by the national television networks. But since the educational telecasts are transmitted from the WTWS studios, the early American setting must be simulated in the television studio. Fortunately, the studio acquired a rear-screen projection unit soon after telecasting began, which has enabled the creation of a complete backdrop with the use of a 4x5 positive slide. Usually, the slide is an actual photograph of a location in the Village.

To contrast the present with the past, each program opens with the story teller in a contemporary setting giving some background on the subject to be featured and setting the scene for the day's trip into the past. With the "magic clock" device, the bridge of time imposes no problem and any period in history can be visited. This element of drama brings history to life, stimulating interest on the part of the viewer.

Costumed "actors," who are actually

Museum staff members, portray the roles of historical figures to be visited by the story teller and her viewers. Make-up and wigs are used, when necessary, for maintaining reality. Rehearsals are held at the Museum with the properties to be used and then a dress-rehearsal on-camera is held in the studio each week immediately preceding the airing of the program.

Typical programs presented since the series' inauguration in November of 1955 are, "Pioneer Schools," "The Toy Shop," "Lincoln's Speech at Gettysburg," "Thomas Edison," "The Village Blacksmith," "American Folk Dancing," "Spinning," "Weaving," "The Potter's Wheel," "Candlemaking," "Keeping House the 1870 Way," "America's Postal System," "The Shoe Shop," and "Glassblowing . . ."

The programs have been kinescope-recorded for rebroadcast and free-loan to schools and educational groups throughout the United States. Having each show preserved on 16mm film has also proved a tremendous help to the producer of the series in objectively appraising and improving the production quality and methods of presentation.

# using COLOR SLIDES in SCHOOL

by David Dufty  
Fulbright Exchange Teacher from  
Australia

*Editor's note: Mr. Dufty is presently teaching at the Bessemer High School, Greensboro, North Carolina, but will return to his native Australia via England, when school finishes at the end of May. His address is - 3 Tryon St., Chatswood N.S.W., Australia. He was raised in Sydney and is a graduate of Sydney University. At home, he teaches High School social studies and uses 35mm color slides to illustrate his lessons.*

I am a color slide fanatic. There are a good many of us in Australia and I guess there must be hundreds of thousands in America. What I wonder is, how many of us are using these slides in school with serious educational intent? I would be delighted to hear from people who are; in fact a major aim in writing this article is to sound out the possibilities of a worldwide fellowship of color crazy teachers, who would be interested in exchanging 35mm slides just as others exchange stamps, shells, tape recordings, etc.

With that off my chest, let me pass on for your consideration some of what I have learned about this medium in approximately nine years use of color slides in secondary schools; mainly in the teaching of social studies; especially world geography.

## 1. USES OF THE COLOR SLIDE.

### A. *The Slide as Entertainment.*

"Here are a few color slides today, class, which I took during the vacation. The order is a little mixed but I think you'll enjoy them. No! No! Not that way!"

I think most of us have met teachers who use movies and other aids in this way just to fill in a period or for the relaxation of the class or the teacher. It is a pity, however, to see valuable tools of knowledge such as the movie, and the color slide used in such a wasteful way.

### B. *The Slide as Motivation.*

When a really striking personal experience is related by the teacher the pupils tend to pay attention. When visual evidence is there, too, they really take notice.

"Gee whiz, Mr. Paddlem, did you

really take that picture?"

Of course he did. Effective modern photography is within the talents of any teacher who keeps his eyes open and has learned one or two basic techniques. In social studies the slide can create interest in places, principles and problems. In English and foreign languages it can be used to stimulate written and oral expression. In art it can be used as subject matter for drawing, for a record of paintings or types of architecture, or if time ran out on the field trip you can show a slide of the spot the next day.

### C. *The Slide as a Source of Information.*

One wonders about the current method of titling each frame of a strip film. The method appears to give away vital information which could well be deduced by careful observation along the lines suggested in the recent UNESCO publication "Handbook of Suggestions on the Teaching of Geography." The "talkie" film has a similar disadvantage derived from the very fact that it does talk and that it frequently talks too much and too quickly. The color slide need not have these disadvantages. For example, carefully taken slides of typical mountain, plateau, hill and plain scenery, can be used in such a way that the pupil discovers the difference himself. Strips and slides have the educational advantage that they can be viewed for as lengthy a time as the teacher requires, whereas movies cannot be safely and agreeably stopped too frequently. In addition, slides can be arranged in the exact order required by the teacher and can be used for emphasis and contrast in various series; for example, the

same slide will be relevant in a series on climate, one on soil, and on vegetation. Half a dozen slides at a suitable place in the lesson development seem preferable to a long and not always completely relevant movie film.

### D. *The Slide as a Means of Revision and Testing.*

The lack of titling of the color slide is again an advantage, for where work is being revised each pupil may then give an account of the features shown. With sufficient light provided for writing the slide can be also used for a written test. Following a field trip in geography or biology, slides taken by teacher or pupils could be shown and used for follow-up purposes. This could be tied in with the work of the school camera club since development of color film is now possible by the amateur.

## 2. *Some Problems and Limitations of the Color Slide.*

The UNESCO handbook, which I mentioned earlier, says the aim of geography is to aid pupils to "imagine accurately the conditions of the great world stage." Slides would be ideal for doing this, but the difficulty is to obtain those that are representative. I have a handful of slides of South America, but when I show them to my pupils they judge the whole of the country by my few not very typical photos. Commercial slides are rather expensive as are strip films in color, and currency is often a problem when one is buying outside of the nation. So I return to my hobby-horse of an exchange scheme, whereby I could exchange some slides of kangaroos and Australian deserts for slides of llamas and Argentine pampas.

Where teachers have technical difficulties, it might be possible to hold summer school courses on educational photography. Again I probably just haven't heard of them. Some commercial firms might, perhaps, have useful publications written for teachers on how to take good color pictures for school use. In regard to projection it has been my experience that a large vivid picture, in a well darkened room, is desirable in this cinemascopic age in order to command all the attention of the pupil and give him such a sense of reality that he indeed feels he is a participant in the drama taking place on that part of the world stage which he is viewing.

Perhaps I am not a true fanatic. I don't wish to imply that the color slide is an educational panacea or a substitute for teaching, but if used wisely . . . I believe that it merits a more prominent place among the "tools of the trade" of the modern teacher.

# Producing A-V Materials in School Systems

by  
Jerrold E. Kemp

**Editor's note:** This is the second and last part of the two-part series, presented by Mr. Kemp, on AV production in central departments of school systems and in individual schools.

Children learn while they do. Here their teacher instructs them in mounting story-telling pictures for display and use in their studies.

The audio-visual field is expanding in many directions. For example, not only are commercially prepared materials finding wider distribution and subsequently greater use, but also increasing interest is being shown in the local production of materials in school systems for specific purposes. Recently this growing importance for local audio-visual production was recognized by the Department of Audio-Visual Instruction of the NEA which devoted one day of its 1957 convention to the theme "Meeting Local Needs Through Local Production."

In order to determine the extent of this expansion and the increasing interest in the local production aspect of audio-visual programs, the writer conducted a nation-wide survey of school systems active in audio-visual production work, and then made case studies of nine midwest school systems with outstanding programs. He found widespread interest in local produc-

tion and patterns of activity developing which foretell further expansion in this phase of school system audio-visual programs.

In a recent article<sup>1</sup> the findings, concerning one aspect of this study, namely the production activity taking place in central audio-visual departments, were reported. It is the purpose of the present article to discuss another phase of this study—the extent of local production activities in individual schools—and to point out some of the contributions such activities are making to school programs.

## Purposes Served

As indicated, the production of audio-visual materials in school systems can take place on two levels. Materials having broad general uses frequently are prepared in the central audio-visual department, while mate-

rials designed to meet specific needs of a principal, his teachers, and their pupils best can be produced in the school itself.

In schools, materials are prepared primarily for classroom use by teachers who have found the need for a greater variety of up-to-date teaching materials with which to motivate and to challenge pupils, as well as a greater desire to relate class activities to things, places, or situations in the community. Also, frequently there is a need for converting one form of instructional material into another for greater or more flexible use; i.e., a diagram in a book may be converted into a transparency so that it may be projected and viewed by the whole class while being discussed by the teacher or by a student making a report.

For many principals, good public relations between the school and its community frequently are maintained

<sup>1</sup>See *Educational Screen*, May, 1957, p. 234 "Producing Audio-Visual Materials in School Systems."

by keeping the public informed of contemplated changes in the school's program, regular and special school activities, and problems which are important to both the school and the community. Often locally produced audio-visual materials effectively serve one or more of these public relations purposes. A set of two-by-two color slides on the school's educational guidance program, used by a dean or guidance counselor at a PTA meeting, not only enriches and gives greater meaning to an otherwise verbal presentation, but may also provide parents with easily understood information which helps them make plans with their children for further education.

Certain visual materials, prepared in schools, are also important to such projects as the school newspaper and yearbook and may serve as photographic records of school activities and of personalities for administrative use. When students participate in preparing materials certain accepted educational goals may be met. These include opportunities for developing leadership, cooperation, responsibility, initiative, and vocational and avocational interests.

### Materials for Production

The variety of audio-visual materials prepared in schools is very similar to that produced in the central audio-visual department of a school system. Here also, needs, available

equipment, and the competencies of those interested in production determine the particular materials which are given attention.

The preparation of two-by-two color slides receives great attention since many schools and a large number of teachers possess 35 millimeter cameras. Slide sets are prepared on school and class activities, community resources, and items of local history. Teachers and pupils bring to school visual reports on vacation trips to share with each other. Science teachers, as well as others, copy printed or pictorial materials and build collections of slides which permit them to individualize and better adapt their instruction to their particular class needs. There is also a growing interest in making records, in the form of slides, of outstanding exhibits, bulletin board displays, and student projects for future reference. As term projects, many classes (including elementary school groups) prepare materials for slides or a filmstrip and frequently the audio-visual director of the school system, or a staff member, cooperates by making the slides which are used in class along with tape-recorded narration.

Because of the needs of school newspapers and yearbooks, a great deal of attention is given to black and white photographs. In many schools the responsibility for providing pictures is assumed by students in photography or journalism classes or clubs. A principal, an audio-visual coordinator, or

frequently a science teacher, with an interest in photography, may be responsible for taking publicity pictures for the school. In some situations, in order to relieve the professional person from routine darkroom work, the exposed negatives are developed and prints are made by local commercial photographic services.

A significant development in school audio-visual programs is the growing use being made of overhead projectors. Since this projector requires that a teacher develop materials to suit his own approach to his subject and to class needs, transparencies for use with the projector must be produced locally. Some teachers use diazo films (nonphotographic film processed in ammonia fumes), while others find that high contrast films are suitable for their purposes.

Motion pictures have been produced in many schools. Initially, this seems somewhat surprising in view of the need for expensive equipment, the cost of materials, and the time required for those who participate, but in almost every instance locally prepared films serve definite and continuing needs. Secondary schools produce orientation films for new students while, with the cooperation of the audio-visual director and persons from the community, films are made on special school activities and programs, even in elementary schools. The athletic departments of high schools sponsor films on football games and other events. Some experimental studies have pointed out the value of combining film production with regular class activities, especially in science and social studies, but as yet the extent of this activity seems limited.

Smaller school systems that operate FM radio stations frequently set up broadcast studios in the local high school and students operate the station under the direction of an interested teacher (often the audio-visual coordinator). Even in large school systems radio classes from each high school assist in the technical operation of the station as well as in writing scripts and performing on shows. Many audio-visual directors encourage elementary classes to plan and present their own live or recorded programs. Television programs, usually of a public relations nature, also are produced with the cooperation of school groups.

A new trend is noted in one phase of local production activity in schools. Encouragement is being given and interest is being shown in the preparation of inexpensive materials by teachers and by older students, under teacher direction. These materials include mounting free and inexpensive

Teacher completes a copy on polaroid film. When removed from the camera the transparency is ready for mounting and projection.

**Design for workroom by Harvey Frye, Indiana University, shows suggested area for AV production in schools; general workroom, photographic darkroom and storeroom.**

pictorial materials for better display, storage, and greater classroom use; preparing charts and posters, using semiprofessional lettering, drawing, and coloring techniques; using simple photography to make copies of materials for display or projection; and employing all of these techniques for exhibits and bulletin board displays. The enthusiasm and industry with which many teachers have applied some or all of these skills to produce their own inexpensive teaching materials is quite remarkable.

### **Facilities and Equipment**

School facilities for production work are generally limited to small darkrooms, but there is a growing interest to provide a suitable workroom for the various forms of inexpensive production previously noted. Audio-visual directors and principals find that teachers naturally are more interested in making materials if facilities and equipment are easily available. Space is being found in older buildings and provision is being made in many newer buildings for workrooms (15x20 feet) and darkrooms (5x8 feet).

Equipment for photography consists of 35 millimeter cameras, larger press-type cameras for copying as well as for regular picture-taking, and necessary darkroom equipment, including a photographic enlarger. Sixteen millimeter motion picture cameras are possessed by some schools, but frequently the central audio-visual department makes one or more cameras available for school use. Equipment for inexpensive production includes a dry mount press for picture-mounting, equipment for mounting large charts and maps, and lettering guides and mechanical devices for poster and display work.

### **Personnel Engaged in Production**

As one part of the survey conducted on local production activities, case studies were made in a number of school systems. The author visited with administrators, supervisors, audio-visual personnel, principals, and teachers. Most persons interviewed expressed an interest in production work, but only those who directly had engaged in making some of their own materials were really enthusiastic and realized the possibilities inherent in these activities and the resulting materials for improved teaching and other communications purposes.

The extent to which the faculty and the students in a school engage in production work often depends on the interest of the principal and his recognition of the values of these activities in the school program. School system audio-visual directors, through demonstrations and their own use of locally prepared materials, make principals aware of this area and so may gain their support. Also demonstrations and in-service workshops for teachers indirectly interest principals in supporting production activity and making necessary funds available. A number of principals, especially those with a hobby interest in photography, prepare their own materials. These mainly concern school activities for public relations.

Many school audio-visual coordinators are interested in photography and this leads them into the production of materials. Motion picture production within a school is often directed by the coordinator and he may be assisted by other teachers and students. Some school system audio-visual directors conduct in-service

courses in production and school coordinators are encouraged to participate in this training. In turn, they can instruct and assist their own teachers in various types of production work.

Teachers in both elementary and secondary schools engage in production activities. For some, production is limited to mounting pictures for display and then use with children in story-telling situations, while others prepare color slides for presenting abstract concepts and information on local topics to their classes. The most frequently mentioned obstacle to teacher participation in production work is finding time to devote to the activity. Unfortunately those active in production often must do their work outside normal school hours; but for many teachers the returns for their efforts, in the form of improved teaching efficiency, satisfaction gained from the accomplishment of creating materials and then sharing them with their students, and student participation tend to minimize the time factor as a serious deterrent. Teachers mention that while planning materials for production they often gain greater insight into their subjects. Also, audio-visual directors note that teachers who prepare their own materials develop greater skills in the utilization of all materials and also become more appreciative and critical of other instructional materials.

Pupil participation in production work also may be limited or extensive. Earlier in this article some educational goals for students were noted, which in part may be realized through participation in production work and thus tend to encourage greater activity for many boys and girls. Children work with teachers in preparing materials for class use; or under the direction of the audio-visual coordinator and special activity teachers, they prepare materials for school-wide or community use. Older students relieve teachers of much of the routine involved in mounting pictures and in darkroom work, while some audio-visual or photography groups provide production services for teachers which include the preparation of needed slides, photographs, and other visual materials.

### **And the Future . . .**

Local audio-visual production probably started when an enterprising teacher first used a blackboard in a classroom. That teacher, in a sense, was attempting to individualize his manner of communicating ideas and information to his pupils. Since that day we have seen local production

*(Continued on page 291)*

# Slide Making Is Easy

by Bruce A. Lloyd

When children are photographed in action, they should understand why the pictures are being taken so the action will be as natural as possible. Showing them actively taking part in a project is of interest to other classes and to parents as well when special programs are presented for them.

Have you ever wished that you could show your favorite pictures of classroom activities without using the cumbersome opaque projector? Have you found it difficult to show pictures to large audiences? Have you found that showing small pictures to small groups of children takes too much time and not all children get a good look at the pictures?

If you have ever been faced with these problems then you will be happy to learn that you can avoid them by making and showing your own slides. Slides offer the advantage of ease of showing and storing plus ease of handling. Slide making offers the further advantage of being as simple and easy as picture making. The most inexperienced amateur photographer can make his own slides.

All that you have to do is make exposures with a 35mm camera, develop the negative, make prints on fine-grain positive film, develop this film and mount in 2 x 2 slide mounts and you are ready to show your own slides. That's easy enough, isn't it?

Perhaps it seems like a waste of time and a lot of trouble to make your own slides, but there are a number of good reasons for making them.

When children see themselves on the screen it helps them relive the learning situation that took place.

Children learn to cooperate because they are working together for a purpose.

Slides are an excellent means of showing parents some of the school or classroom activities in which their children have participated.

Slides may also be used as a teaching and motivating device.

They may further be used to help orient new teachers both as to showing some of the classroom and school activities that have been done and how those activities were accomplished.

*Equipment and Materials.* Surprisingly enough only a 35 mm camera, tripod, and exposure meter are all that is needed to make your own slides if you wish to forego the satisfaction of doing it yourself. On the other hand, to make them yourself all that you need add to the above list is an inexpensive darkroom outfit.

In making our slides the following equipment and materials were used:

1. A 35 mm camera
2. A tripod
3. An exposure meter

4. A contact printer
5. Fine grain positive film and negative film
6. Film processing chemicals and developing tank
7. 2x2 slide mounts for 35mm slides

*Steps in Slide Making.* In order to obtain a really good photographic record of any classroom activity the following steps are suggested:

1. Preparing the children for picture taking.
2. Taking the pictures.
3. Processing the negative.
4. Printing, processing, and mounting the slides.

*Preparing the Children.* The children should understand why pictures are being taken so that the action shown will be as natural as possible. One reason for photographing a classroom activity may be to help augment a regular program for parents. The slides can show the various steps of the activity in which the children participated. Another reason for photographing the activity may be to show other classrooms what one room has done. In any case the purpose should be made clear to the children.

*Taking the Pictures.* Pictures in the

classroom can be taken by using either flash or time exposure. Flash is most convenient because it does not interrupt the children in their work. A time exposure is recommended, however, because it produces more even lighting of the subject.

The pictures that are taken should show the children doing something. Not too many children should appear in each picture. Ideally, the pictures taken should show the various phases of the activity, step by step, from beginning to end.

**Processing the Negative.** Have the film developed at any reliable photographic dealer or develop it yourself according to the manufacturer's recommendations.

**Printing, Processing, and Mounting the Slides.** Any good film processor will make black and white slides from your 35mm negatives, but it is much cheaper to do it yourself. Also, if you process your own slides you can make them the way you want them.

The first step in making the positive is to print it. This is done exactly as in making paper prints. An ordinary printing frame is sufficient in this step, but it is more convenient to use a contact printer.

In the darkroom place the 35mm negative strip in position on the print frame or contact printer. Be sure that the emulsions side of the negative is up or facing you. Then place a small piece of fine grain positive film, emulsion side down over a frame of the negative. Line up the sprocket holes in both pieces of film. Close the lid of the printer and expose to light for about one second. Remove the

positive film from the printer and develop it.

In processing or developing the positive film it is recommended that the developer used be of high contrast such as Kodak D 11. Dilute the developer as follows: one part D 11 to two parts water. Develop the positive by inspection until the image shows through the film base. The time will vary from five to ten minutes. The emulsion side will appear quite dark. After development for the recommended time place the positive in a short-stop bath for fifteen seconds and then in the hypo or fixer. After a minute or two the film will be clear. Turn on the white light (after checking to see that all film is covered) and inspect the positive. It should be dark enough to show detail, but thin enough so that light will pass through it. If the slide is too dense the projected image will not show up well on the screen.

There is no cut-and-dried exposure-development formula that will assure perfect positive slides. Experimentation with exposure and development times is the only sure way to get the results that you want.

When the positive slides have been completely processed mount them in slide mounts and they are ready for projection.

With a little practice it soon becomes easy to make fine positive slides; slides that you will be proud to show. Try making your own slides. The satisfaction of having made them yourself is its own rich reward. Try it, and then you can tell others that slide making is easy.

## Living American History

(Continued from page 285)

Teachers and students have been enthusiastic in their reception of the *Window to the Past* series. Discussions following the telecasts indicate that the material presented was meaningful and teachers have reported that students will often refer to something seen on a program, sometimes even weeks after it has been viewed.

Recently, third grade students at Lafayette school in suburban Detroit's Lincoln Park were asked to take pencil and paper to the auditorium in the event they would like to jot down some notes to remember while watching a *Window to the Past* program. The sketches of period furniture drawn by these eight-year-old students from scenes in the program were remarkably accurate and were evidence that the material presented was understood and remembered.

"Combining a happy balance of entertainment with education to make an interesting, yet educationally worthwhile program, is a challenge," according to the Museum and Village Executive Director, Dr. Donald A. Shelley. "*Window to the Past* is an experiment in utilizing this combination, which we feel has proved successful."

## Producing AV Materials

(Continued from page 289)

activities develop and slowly become an essential part of our educational programs.

For some school administrators, supervisors, and teachers these ideas and activities are still beyond their grasp, but their number is becoming smaller and smaller as they realize the unique contributions that local production can make to the improvement of instruction. The point has now been reached at which a teacher can use a camera to record a scene or activity and immediately have a slide for projection, without time or expense for further processing. Similar developments can be expected in other areas of production. The success of local educational television will be dependent to a large extent upon the local production of visual materials.

In the future, we will see greater reliance upon local production activities to fit specific local needs—in the classroom, the school, and school-community relations. Each teacher will adapt techniques of local production to help in solving her own teaching problems and to serve her own instructional needs, and will, surprising enough, find more time available for teaching a greater number of topics more effectively.

Here is all the equipment you will need to enjoy the fun of making your own slides. Full list of items is given on the facing page.

Shakespeare's *Macbeth* became more tangible and much more interesting to the students of English Literature, when assisted by a short film of the play, a tape recording of the actors and a comic book production of "Macbeth" to clarify the plot and order of events.

Photo by  
Major Ragland

## SEEING ENGLISH by Mrs. Elizabeth Miller

IT TAKES some doing in these times of rapid advancement and changing needs to keep students vitally concerned with those "required" subjects at the high school level. English, which has been a "required" subject since the first day of school, seems to take top honors in this group. Audio-visual material has proved a medium in my English classes that has helped remove monotony and stimulate interest. Above all else, it has helped focus attention on common designs and experience with a result of accomplishment for all, regardless of ability.

One of our most commonly used visual-aids is the film. How better can one study the English and American novel than with a full-length film based on "Jane Eyre" or "The Tale of Two Cities."

Another field is in the strictly audio department—tape recordings. We have made use of short films on Shakespeare and on "Macbeth," but to have the privilege of hearing the entire production of "Macbeth" with such actors as Judith Anderson and Maurice Evans added greatly to our appreciation of the drama. In this same study the class used a comic book production of "Macbeth" to help understand the plot and fix the order of events in mind. The authentic organization of the comic book makes it a good reference source for all

level students.

The core curriculum is not the plan of organization for St. Helen's High School, but the theory of this plan has been the basis for development of some of our visual aids activities. Through student work we have developed a time chart integrating knowledge of events from history with events in literature. By combining an outline map of the United States and name pendants, we have associated authors geographically. Since all three things are dependent upon each other a better recognition of literature's place in our lives has been established. One student's contribution is a modified cartoon of map, list of authors, and figures representing titles.

An excellent source of pictures for mounting has been made available to English literature teachers this year through the illustrated story on Sir Winston Churchill's "History of the English Speaking Peoples" as published by Life magazine. First showing these pictures with the opaque projector and then using them on a bulletin board helps to add reality to the English history which must supplement the English literature to give it reason and meaning.

The flannel board can have a definite place in the understanding of origin of the English language; for instance, I have in mind a large map of England on flannel with name

plates of invading peoples that can be added and moved as time advances. Reading, seeing a movie on this, and using the flannel board for recreating the steps gives a three-way experience that is pleasant and lasting.

After completing the study of the growth of American literature the class quickly recognized the weakest point of their experience—the accurate linking of author with title. So as to strengthen this point in their learning we prepared the good old flash-card type of thing and did some class competition in matching on the bulletin board. This is usually considered strictly an elementary approach, and yet, as long as we do not allow the activity with the cards to continue too long, the class participates, competes, learns and has a variation in its usual procedure.

We have used records for the medium of studying folk literature. This is more appealing to the student if a current favorite among the artists can be introduced. So as not to be interrupting the playing, we list the titles on the board which makes for more undivided attention.

There is no limit to the amount of audio-visual experiences that can be used for teaching English literature and grammar, too. I feel quite sure my students are happier in their study with this added type of learning.

# GOLDEN REEL AWARD WINNERS

Highlights of the

# AMERICAN FILM ASSEMBLY, 1957

Citizenship and Government: **The Big City** (Entrant and Producer: Charles Guggenheim & Associates, Inc.; Sponsor: Mayor Raymond R. Tucker; Distributor: Charles Guggenheim & Associates, Inc.)

Education: **A Desk For Billie** (Entrant, Sponsor, and Distributor: National Education Association and Affiliated State Education Associations; Producer: Agrafilms, Inc.)

Junior and Senior High School (Natural Sciences, etc.): **Village of Spain** (Entrant, Producer, Distributor: Churchill-Wexler Film Productions)

Junior and Senior High School (Art and Crafts, etc.): **Indian Artist of The Southwest** (Entrant and Producer: Cine' 937 Productions; Distributor: Coast Visual Education)

Preschool Through Intermediate Classroom: **Gallant Little Tailor** (Entrant and Distributor: Contemporary Films, Inc.; Producer: Primrose Productions)

**The Hot Rod Handicap** (Entrant and Sponsor: Richfield Oil Corporation; Producer: Hal Raach Studios; Distributor: United Artists, Stanley Warner, Southside Theatres, Metropolitan, Pat Patterson Productions)

Recreation: **A Place For Growing** (Entrant and Producer: Campus Film Productions, Inc; Sponsor and Distributor: Boys' Clubs of America, Inc.)

Economics: **Your Share In Tomorrow** (Entrant: Knickerbocker Productions, Inc.; Producers: Knickerbocker Productions, Inc. and International Film Foundation, Inc.; Sponsor: The New York Stock Exchange; Distributor: Modern Talking Picture Service, Inc.)

Business: **Outside That Envelope** (Entrant and Producer: Parthenon Pictures; Sponsor: Connecticut General Life Insurance Company)

Features: **The Great Adventure** (Entrant and Distributor: Louis de Rochemont Associates Film Library; Producer: Arne Sucksdarff)

The Fourth American Film Assembly, Golden Reel Competition and Sound Slidefilm Conference, drew a record attendance of more than 1200 film enthusiasts to New York's Statler Hotel from April 22-26. A total of 258 films were on the program, for which 72 awards were made. Entries totaled almost 400; many were eliminated in regional pre-screenings. Sound slidefilms entered were 70, programmed 54, awards 13. More than \$10,000 was spent on entering the films and slidefilms; this year's increase in entry fee to \$25.00 did not prevent publishers and sponsors from submitting their products for competitive judging. An estimated \$6 million was the production cost of the films screened.

## "RICHLY DESERVED AWARD"

U.P. Photo

Helen Keller (right) received her Golden Reel from Nancy Hamilton who produced the 16mm film "Helen Keller In Her Story," and H. A. Tollefson, President of the Film Council of America, at the fourth Annual American Film Assembly. The film is distributed by Louis de Rochemont Associates, 35 West 45th St., New York 19.

## **new teaching films from Coronet...**

Continuing a balanced program for all grades, from primary through high school.

### **The world's largest producer of educational films**

In the 12 month period—October, 1956 through September, 1957—Coronet Films will have completed sixty-six new and outstanding educational motion pictures. Each film on this huge production schedule has been produced under Coronet's control every step of the way—at the initial planning stage, during the script-writing, when working with skilled educational collaborators, while shooting and editing the films, and when the finished prints are being prepared. These vigilant production standards have also held true for the 655 other motion pictures produced by Coronet since it began making teaching films. The result—teaching films of the highest caliber, integrated into a long-range, carefully planned educational program . . . the largest of its kind in the world.

*new films for this year are listed by grade level on the next page. Each is offered in color or black-and-white and*

## 21 FILMS FOR THE PRIMARY GRADES

**Beginning Responsibility: Being on Time.** The importance of being on time and how to do something about it.

**Beginning Responsibility: Other People's Things.** Builds positive attitudes about respect for the property of other people.

**\*The Big Sun and Our Earth.** How the sun affects the earth—why we have night and day and how the sun gives us light and heat.

**A Boy of the Netherlands.** A language arts film which will create interest in old and new Holland.

**\*Bushy, the Squirrel: Background for Reading and Expression.** The story of Stevie's friendship with a squirrel will stimulate reading and storytelling about this animal.

**Fairness for Beginners.** Ways of being fair that make a happy classroom.

**How Birds Help Us.** Jack's observations convert him from believing that birds are pests to awareness of the many ways they help and please us.

**How Insects Help Us.** Bill finds that insects have many uses—why, even the grasshoppers he uses for fishing bait are useful.

**How Trees Help Us.** How trees help us by supplying lumber, food and materials for things we make.

**How Water Helps Us.** The major uses of water and how it helps man, plants and animals.

**How Weather Helps Us.** The way that weather affects man, plants, and animals, reviewing the weather that accompanies the changing seasons.

**Kindness to Others.** When Sam is ill, his classmates remember his kindness and begin to learn something of its meaning and importance.

**Lands and Waters of Our Earth.** The various land and water forms shown help the pupil understand the relationships among them.

**Let's Measure: Ounces, Pounds, and Tons.** A graphic demonstration which clarifies the relationships among measures.

**Let's Measure: Pints, Quarts, and Gallons.** Standard liquid measures have basic relationships and symbols of their own.

**Summer is on Adventure.** This film shows the major features and activities of summertime.

**The Truck Farm.** Life on a truck farm—the work done on it, what the farm produces, and where the products go when harvested.

**We Explore the Woodland.** An exciting exploration in the woods—trees, wild flowers, small animals, colorful birds, insects, and wild fruit.

**Where Does Our Food Come From?** From the men who deliver products to the store in which Dickie works, he learns the sources of our food.

**Woolly, the Lamb: Background for Reading and Expression.** A tender story of a lonely little lamb who looks for a playmate and finally finds one.

## 21 FILMS FOR THE INTERMEDIATE GRADES

**Adaptations of Plants and Animals.** (1 1/4 reels). Selective views and directed observation of various forms of life, leading to understanding of the principles of adaptation.

**Amphibians.** The life of frogs, toads, and salamanders, showing the characteristics they share and the differences among them.

**\*Animals with Backbones.** The structural differences between vertebrates and invertebrates are shown by means of living examples and illustrations.

**Audubon and the Birds of America.** (1 1/2 reels). The life work of a great "American Woodsman."

**Australia: The Land and the People.** (1 1/2 reels). The climate of the Australian continent and its major economic activities.

**Bicycle Safety Skills.** The performance techniques, traffic rules and procedures and bicycle inspection practices that make safe cyclists.

**Boy of Renaissance Italy.** Filmed in Italy, this is the story of Niccolo who goes to Florence to become an apprentice artist.

**\*The Boyhood of George Washington.** The formative years of Washington held experiences which later uniquely equipped him for leadership.

**Courtesy at School.** Jerry learns that being courteous helps him to enjoy his work and play more.

**Fossils: Clues to Prehistoric Times.** The exciting story of fossils—where they are found, how they were formed, and what they tell us about the past.

**Indonesia: The Land and the People.** (1 1/4 reels). A survey of the geography and history of a rich island republic.

**Inventions in America's Growth (1750-1850).** The inventions which met the needs of a growing America—the steam engine, locomotive, telegraph, cotton gin, and others.

**Inventions in America's Growth (1850-1910).** The inventions which allowed men to live comfortably in huge, concentrated urban populations—the automobile, telephone, electric lamp, and others.

**\*Ireland: The Land and the People.** Economic activities, the political division of the island into north and south, and new industrial developments.

**\*Life of a Philippine Family.** The simple life of a village family illustrates the means by which rural Philippine people meet their needs.

**Life of a Primitive People (Africa).** (1 1/4 reels). A primitive tribe in Africa today shows a way of life paralleling that of man in prehistoric times.

**\*The Philippines: Gateway to the Far East.** The past, present and future growth of a republic with interests similar to those of the U. S.

**Southeast Asia: Lands and Peoples.** (1 1/4 reels). A review of economic and human resources of four countries—Burma, Thailand, Malaya and Indochina.

**The Soviet Union: The Land and the People.** (1 1/2 reels). (B&W only). A view of the economics and geography of the world's largest country.

**The Story of Citrus Fruits.** The growth of citrus seedlings, the care of trees, and how fruits are harvested, processed, canned, and frozen.

**Understanding Fire (Exploring Science).** The characteristics and uses of fire—and its three requirements: oxygen, fuel, and heat.

**Understanding Our Earth: How Its Surface Changes.** A visual presentation of the forces which build up and wear away the earth's surface.

**Understanding Our Earth: How Its Surface Changes.** A visual presentation of the forces which build up and wear away the earth's surface.

## 22 FILMS FOR JUNIOR & SENIOR HIGH SCHOOLS

**American Literature: The Westward Movement.** The people and themes of the westward movement as a source for writers from 1800 to today.

**The Ancient Orient: The Far East.** (1 1/4 reels). An unusually rich film on the growth of the early civilization of China, Japan, and India.

**\*Behavior in Animals and Plants.** Clear definition and illustration of tropism, reflex action, instinct, and intelligence.

**Brahms and His Music.** (1 1/4 reels). The life of the musician, the controversy over his music, and a clear explanation of his great musical contributions.

**Careers in the Building Trades (Basic Skills).** Seven occupations in the building trades shows some of the advantages of and skills required for each.

**Early American Civilizations (Mayan, Aztec, Incan).** (1 1/4 reels). The cultural growth and attainments of 3 civilizations.

**\*English Literature: Chaucer and the Medieval Period.** (1 1/4 reels). The major literary forms of this age, with re-enactments of some of its greatest works.

**English Literature: The Romantic Period.** (1 1/4 reels). A period of literary revolution, with dramatized selections from Burns, Byron, Shelley, Keats, and others.

**English Literature: The Victorian Period.** (1 1/4 reels). A great age of English literature—of Eliot, Dickens, Thackeray, the Brontes, and others.

**The French Revolution.** (1 1/2 reels). An unusual film of the major events of a turbulent period.

**\*How Living Things Change.** An examination, comparison, and illustration of the theories of Darwin, Lamarck, and de Vries.

**The Human Body: Circulatory System.** (1 1/4 reels). An analysis of the entire circulatory system—heart, lungs, kidneys, arteries, and veins.

**Liszt and His Music.** (1 1/4 reels). The "prince of pianists" and his music—with re-enactments of the composer's life and times.

**Mark Twain: Background for His Works.** (1 1/4 reels). The colorful life in Missouri and the West which inspired some of Twain's greatest works.

**The Mayas.** The ruins of ancient American civilization tell us of great cultural advancements.

**The Napoleonic Era.** (1 1/4 reels). The great moments of 1796-1815 from Napoleon's rise to power through the disintegration of the Empire.

**The Nature of Color (New).** (Color only). A clarification and demonstration of the nature of color and the principles of color mixing in painting, photography, and printing.

**\*Reproduction in Animals.** The function of each parent, three main types of sexual reproduction, the embryo's development, and the birth processes.

**Understanding Our Universe.** Vivid presentation of how man learned and is learning about the universe.

**United States Expansion: The Louisiana Purchase.** (1 1/4 reels.) Scenes depicting the details of this territory's history in relation to westward expansion.

**Using the Laboratory (Chemistry and Physics).** The scientific ways, attitudes, safety practices required when solving a laboratory problem.

**Walt Whitman: Background for His Works.** (1 1/4 reels.) Scenes of the poet's life and of the nineteenth-century America in which he lived contribute to a deeper understanding of his work.

**Using the Laboratory (Chemistry and Physics).** The scientific ways, attitudes, safety practices required when solving a laboratory problem.

**Walt Whitman: Background for His Works.** (1 1/4 reels.) Scenes of the poet's life and of the nineteenth-century America in which he lived contribute to a deeper understanding of his work.

**How the Animals Discovered Christmas.** (1 1/4 reels.) A delightful story of how the animals of Cozy Valley make their Christmas a happy one.

**The Life of Christ in Art (Catholic Version).** (2 reels.) Great paintings illustrate the life of Christ for Catholic Schools.

## A CHANGING LIBERIA

(Association Films, 347 Madison Avenue, New York, New York) 29 minutes, 16mm, sound, color, 1956. Rental Free. Produced by Vogue Wright Productions for the Firestone Tire and Rubber Company.

### Description

The grafting of a rubber tree to improve its hardiness and productivity symbolizes the film's theme "that two different worlds can enrich each other when they solve their problems together." Liberia, Africa's only republic, is a land of the old and the new. The old is represented in the tribal organization of the people, their traditional methods of agriculture, and their folkways. The new is represented in the technology which accompanies the growing of rubber trees and the processing of latex. The impact of modern civilization on the native people is illustrated by the case of Saba Joe, who learns how to tap the rubber tree in a special school, and his wife, Fallalai, who gradually accepts the idea of modern medical care and agrees to have her baby in a hospital.

The history of the Republic, its size, location, and natural resources are described. Soil and heavy rainfall were determining factors in the introduction of rubber culture in 1926. The initial problems were clearing the jungle for plantations, competing with

primitive agriculture for labor supply, and combating fever and disease. Nowadays the extensive plantations and processing plants for rubber production are the economic foundations of the entire country. The rubber industry has brought modern housing, health facilities, schools, roads, seaport facilities, commercial air transportation, and has stimulated the development of other industries. "The welfare of people and their productivity and the welfare of the world are inseparable."

### Appraisal

This is a technically competent film which was written and directed by one of America's outstanding documentary film producers, Gordon Weisenborn. It is hard to imagine an audience which would be bored by the film, with its fascinating people and processes. Although few teachers will find the film tailored to fit their curriculum, many should find it useful. The geography teacher has in A CHANGING LIBERIA an example of man's adaptation to a hot, wet land, as well as a fairly detailed exposition of the story behind the production of one of the world's important economic commodities. The social studies teacher can use the film to show how United States' interests are involved in Africa. Some will draw the implication that the economic development of a country by American private capital without interference in

that country's government can strengthen that country's resistance to communism. For a keener insight into the political aspects of Liberia, however, one would do well to see the Liberia section in Part I of Edward R. Murrow's REPORT FROM AFRICA, a recent 16mm release of the McGraw-Hill Book Company. A CHANGING LIBERIA shows folkways of the people, particularly their dress, dances, and music which might well interest the anthropologist. The length of this film, its richness of material, and its very style of treatment, suggest that it could become a very popular auditorium film for schools. It is an anthropogeographical film which will also be of general interest to family and adult audiences. Because A CHANGING LIBERIA is a film sponsored by an industrial organization for public relations purposes, some film users may ask if it is sufficiently unbiased to have educational value. Those who are anxious about this point should see the film and answer the question for themselves. The film is believable, contains no direct advertising, and treats a country about which few films are available.

Ledford Carter

## ENGLISH LITERATURE: THE ROMANTIC PERIOD

(Coronet Films, Coronet Building, Chicago 1, Illinois) 13 minutes, 16mm, sound, black and white or color, 1957. \$68.75 or \$125. Teacher's Guide available.

### Description

A visit by a London reporter to a literary critic of the 1820's reveals many of the ideals and revolutionary activities of that period of English history referred to as the Romantic Period and recalls briefly some of the major literary figures who contributed to that movement.

Mr. Sims, a London newspaper reporter who is writing a series of ar-

THE FINEST CLASSROOM FILMS ARE MADE BY CHURCHILL-WEXLER FILM PRODUCTIONS

tides on the writers of the late 18th and early 19th centuries, calls on Mr. Ernest Dawes, a literary critic, for an interview. Through a process of flashbacks and reminiscences, Mr. Dawes talks of the historical significance behind the Romantic Period which was influenced by four major revolts—the American, French, Irish, and Industrial Revolutions. He characterizes the period as one of individual self-expression in which the romanticists or revolutionaries were pledged to urge the freedom of man.

The literary critic's discourse on social justice is punctuated by dramatized selections from the works of the major leaders such as Lord Byron, Robert Burns, William Wordsworth, Percy Bysshe Shelley, Samuel Taylor Coleridge, William Blake, John Keats, and Sir Walter Scott.

Throughout the film, selections are quoted to strengthen the premise that Romanticists were striving for freedom, equality, and brotherhood. According to the French writer Rousseau, "Man is born free, and everywhere he is in chains." The spirit of the time was expressed by, "men who envisioned in their writing, a better world—a world in which beauty, brotherhood, and human dignity gain a better world." Poets are referred to as, "... legislators of the world." The statement, "We have, all of us, one human heart," is attributed to Wordsworth who described poetry as a, "spontaneous overflow of our feelings." Coleridge and Blake are categorized as mystics who at times could not face a real world but must retreat to dreams. Lord Byron is considered a true revolutionary and a man who was, "bad, mad, and dangerous to know." Keats and Scott took refuge in the romance of another time. Evil was set down and good triumphed. They were romanticists for the sake of romance alone.

Romanticists are described as writers who saw the world and people personally in their search for the freedom and brotherhood of man. The Industrial Revolution is pictured as leading to the slavery of man and the corruption of children, contributing to the movement for human freedom advocated by the Romanticists.

**ENGLISH LITERATURE: THE ROMANTIC PERIOD** concludes with the reporter taking leave of the critic after they had discussed the more compelling writers of the period and had reviewed some of their major ideas and works concerning the freedom of the individual.

of the more important writers of the Romantic Period provides an effective medium of organizing and reviewing the dominant ideas and literature of the time. The skillful use of flashback and interview-narration type of presentation adds much interest to a subject which could have been easily hampered by undue trivialities. ENGLISH LITERATURE: THE ROMANTIC PERIOD is especially suitable for a senior high school audience as an introductory film prior to the study of this period of literature. It contributes to the complicated problem of associating the writings of the period with social forces prevailing at that time. For these same reasons, this film might well be used on the early college level when studying English literature.

O. E. Bismeyer, Jr.

## TECHNIQUES OF ORGANIC CHEMISTRY —

### Parts I, II, III, IV

(Young America Films, Inc., 18 East 41st Street, New York 17, New York) Total running time, 62 min. Four parts: 11 min, 20 min, 12 min, 19 min. 16mm, sound, color, 1956. Complete set price, \$540; individual parts \$100 per reel. Teacher's Guide available.

#### DESCRIPTION

In this series of four films, Professor Louis F. Fieser, Harvard University, demonstrates a number of organic chemistry techniques.

Part I. In this film, Dr. Fieser first shows how to assemble some of the equipment that is used in the experiments; he then presents demonstrations of fractional distillation, melting point determination, and the Rast determination of molecular weight.

In fractional distillation of a mixture of benzene and toluene, Dr. Fieser shows how to pack the column with a stainless steel scouring pad, how to fit the hardwood slip collar on the microburner, how to make the chimney holder, and the need for careful heat control to separate the two liquids. Graphs of distillation curves show the relative efficiency of various column packings.

Next, Dr. Fieser demonstrates melting point determination. After showing how the open end of a melting point capillary is pushed into a pile of sample to scoop up a short section of material, he demonstrates the attachment of the column to a thermometer and finally the proper technique for heating the sample in a bath of paraffin oil.

The last demonstration in this film is the Rast determination of molecular weight. Dr. Fieser shows the placing of

a solid solution of substance in camphor in a capillary which is then evacuated and sealed. This tube is attached to the thermometer alongside a tube of camphor alone and both are heated. The molecular weight can be calculated by melting the mixture and the camphor then observing their temperatures and the per cent of substance.

Part II. Dr. Fieser's demonstrations in this film are crystallization, clarification, isolation of cholesterol from gallstones, and collection of a precipitate.

He first shows various kinds of equipment and demonstrates the uses of several kinds of wash bottles. After showing the importance of solubility tests, he demonstrates the proper procedures for crystallization including the transferring of the substance to a flask, gravity filtration, addition of more solvent, heating, allowing to stand for slow crystallization, and the precautions taken to prevent premature crystallization.

Next, he demonstrates clarification of Martius Yellow, a synthetic dye. Crude acid and water are added and Dr. Fieser shows the useful technique of swirling. Then he transfers portions to four test tubes and adds different amounts of crude carbon to each. Finally, in demonstrating a second method of clarification he shows that heating is only required in working with a hot, saturated solution.

In the isolation of cholesterol from gallstones, a portion of crushed stones is digested with dioxane. After filtration of the solution a hot solvent is applied to the walls of the flask, the filtrate reheated then diluted with hot water. The yellow impurity is now removable.

In Dr. Fieser's next demonstration, benzoic acid is precipitated from an alkaline solution, the slurry placed into a suction funnel, and eventually a compact cake is formed which is vacuum dried. He points out the significance of the reaction of the resulting orange compound with aniline then shows supersaturation by the addition of a seed crystal.

Part III. Extraction, countercurrent distribution, and elution chromatography are demonstrated in this film. Equal volumes of ether and water are added to a simulated reaction mixture of a yellow acid and a blue hydrocarbon in a separatory funnel which is then shaken, swirled, and twirled. The lower layer is drawn off then dilute alkali and salt solution are added which make the layers visible. The yellow acid is recovered from the red solution; the final stage being the addition of methanol and the setting aside of the

solution to crystallize.

In the countercurrent distribution demonstration, two natural pigments are used which are acids differing from each other only in that one is the hydroxy derivative of the other. Half-gram portions of the two are dissolved in ether, aqueous buffer is added, and the aqueous layer of the mixture is run into a second funnel. Fresh buffer is added to the first funnel and fresh ether to the second. Both are equilibrated. Dr. Fieser shows that time can be saved by performing two operations at once when the process is repeated. When the process is suitably extended, he shows that one of the samples crystallizes into needles, the other, into plates.

Dr. Fieser first shows how to load a chromatograph tube in the elution chromatography demonstration. The mixture to be separated contains equal parts of a crude hydrocarbon and its yellow oxidation product. A portion is dissolved in benzene and the solution poured into the tube. He demonstrates the elution of the column and the evaporation of the solvents resulting in a sharp separation of the two components. He then shows an example of purification of a crude azulene preparation.

Part IV. In this film Dr. Fieser demonstrates a synthetic sequence involving preparation of Martius Yellow and of six derived compounds. In the preparation of Martius Yellow, a sample is crystallized and saved. The rest is reduced to the air-sensitive diamine which is dissolved in dilute hydrochloric acid. The clarified solution is divided into two parts. One part is oxidized and compound II separates as fiery red needles. A part is crystallized and saved; a part is converted to yellow diacetate, and a part is hydrolyzed to orange aminonaphthoquinone. The second half of the solution is treated with acetic anhydride and sodium acetate to produce a diacetate. This separates as a pure white solid. A part is crystallized and a part is oxidized to the yellow acetylamino compound; this is hydrolyzed to the last compound of the series. Dr. Fieser mentions that in his class this series of experiments is the basis for an annual Martius Yellow Prize Competition.

#### APPRAISAL

The evaluation committee feels that these four films are excellent for use in college chemistry classes to supplement lectures on general laboratory techniques and to help illustrate certain chemistry principles. Some of the demonstrations are the type that will probably be repeated by the student in the laboratory while others illustrate certain principles and need not

be repeated. Dr. Fieser's demonstration techniques are outstanding and will serve as an inspiration to chemistry students. One is impressed with the speed, precision, and confidence with which he carries out the experiments. These films are straightforward with few frills and little or no wasted time. They start immediately with the problem and Dr. Fieser wastes neither action nor words. During some of the demonstrations, the scenes are changed very infrequently, but this does not detract from the film's effectiveness. Although these are primarily college films, they probably will be inspirational and motivating to younger students. Also chemists and chemistry instructors will find them helpful.

— George Vuke

## INDIAN FAMILY OF LONG AGO (BUFFALO HUNTERS OF THE PLAINS)

(Encyclopaedia Britannica Films, Inc., 1150 Wilmette Avenue, Wilmette, Illinois) 14 minutes, 16mm, sound, black and white or color, 1957. \$125 and \$62.50. Teacher's Guide available.

#### Description

This film, produced on the Pine Ridge Indian Reservation in South Dakota and at Custer State Park, tells the story of the Indian tribes who inhabited the great plains of the southwest nearly 200 years ago.

In the opening sequence, Redhorn, the hunter, and his family are preparing to leave their winter hunting grounds in the hills to join the rest

13 East 37th Street, New York 16, N.Y. Dep't ES

of their tribe on the plains where they prepare for the first great buffalo hunt of the season. The women and girls have taken down the teepee and have packed and loaded the family's household goods. As the family begins its long trek, Redhorn leads the way on his horse. Close behind him on another horse is Chatanna, his eleven-year-old son. Chatanna's sister, Yellow Flower, walks behind him but in front of their mother. Oessedah, who leads the horse which is drawing the family's belongings on travois poles. The grandmother walks behind everyone.

After many days of travel the family reaches the camping grounds near the land where the buffalo herds graze. While the girls and women put up the teepees, some of the men go out to hunt rabbit or deer for food. Redhorn teaches Chatanna the things that every Indian man must learn — how to make bows and arrows, how to hit targets, and the arts of hunting. The father tells his son stories of their ancestors who were great hunters.

A shift in scenes shows Indian boys playing games. In the meantime, the girls and women must do all of the hard work around the camp. The girls are taught how to make clothing from buffalo and deer skins and to embroider designs on them. Also, they learn how to use buffalo hide for making parafleches — boxes in which to store dried meat.

Another sequence shows women cooking rabbit meat in the stomach from a buffalo. The pouch is suspended on poles, and some water is poured into it. The meat is added, and cooking begins when heated stones are dropped into the water. After sun-

down, the chief sends a scout out to locate the buffalo herd. While they wait for his return, Redhorn paints stories of his own life on the walls of his teepee. The women and girls are busy cutting pegs and setting up racks on which the fresh meat will be dried after the hunt. The scout returns on the second day and makes his report. A crier calls the hunters together and final plans are made for the hunt. Although Chatanna is too young to take an active part in the hunt, he joins the hunters. When the herd is spotted, and the men close in for the kill, Chatanna watches from a distance on his horse as Redhorn strikes down a big bull and gives thanks to the Great Spirit. Two other bulls are also killed.

After the herd has gone, the women come to skin the killed animals, cut up the meat, and take it and the hides back to the camp. The meat is hung up on racks, and the skins are stretched, pegged to the ground, and scraped before drying. At nightfall Redhorn's family gathers around the fire in their teepee to feast and listen while he tells heroic stories of his past. Chatanna dreams of the day when he, too, will become a great hunter.

Camp is broken as the film ends, and the family is getting ready to move again as they must follow the wandering buffalo herds.

#### Appraisal

INDIAN FAMILY OF LONG AGO should be of special interest to teachers of social studies on the elementary school level. It gives a vivid picture of Indian family and tribal life as it probably existed among the buffalo hunters of the great western

plains. All character roles in the films are played by members of the Oglala Sioux tribe now living on the Pine Ridge Indian Reservation in South Dakota. The costumes and artifacts pictured in the film were loaned by museums, and the authentic Sioux background music was provided through recordings from the United States Library of Congress.

Pearl Walker Headd

### TALKING SENSE: IRVING LEE—

### WHY DO PEOPLE MISUNDERSTAND EACH OTHER?

(NET, Audio-Visual Center, Indiana University, Bloomington, Indiana) 30 minutes, 16mm, sound, black and white. Produced by WOI-TV in association with Fund for Adult Education. \$100.

#### Description

Irving J. Lee, in a series of films "Talking Sense," introduces a number of significant areas in communication for discussion. In this film he deals with the unique character of words and the question, "Why do people misunderstand each other?"

Lee's opening remarks reveal the polar nature of people's reactions to ambiguous statements — outright dismissal of the speaker or an attitude of inquiry and puzzlement. It is the situation in which one person dismisses the assertions and person of the other that Lee recognizes some interesting facets in human dynamics.

The major sequence to follow includes Lee's survey of five significant characteristics of words: (1) their technical or nontechnical character, (2) regional differences in usage, (3) their change in meaning through time, (4) the way new words are continually being coined, and (5) how different circumstances call for differences in tone or "status" in choice of wording. All these characteristics are illustrated with concrete examples of word usage according to differences in situation, time, or place.

Lee then analyzes the act of communication as a process of human interaction between speaker and listener and shows what occurs where the listener interprets words as he would use them rather than as the speaker meant them. The result is "by-pass" — the speaker uses words one way, and the listener interprets them in another. Examples are used indicating how "by-pass" on occasion can lead to humorous or tragic consequences. One illustration involves the misinterpretation of an "X" made by

Lenin on a note reporting the imprisonment of 1500 counter-revolutionaries in Russia. The head of Secret Police regarded the "X" as a death sentence and proceeded forthwith to execute the prisoners. It was subsequently revealed that Lenin's "X" meant merely that he had noted the contents of the message. A more recent instance of "by-pass" in communications between representatives of foreign nations is also revealed. America's agreement that Russia was "eligible" for trusteeship was misinterpreted by the latter's representatives as meaning that America would support Russia's request, while it turned out that it was merely a recognition that Russia would "qualify" and that this recognition was not intended as an implicit approval. Again, confusion and misinterpretation result from an over-emphasis of the "word" and a simultaneous neglect of the intentions of the speaker.

Implications of "by-pass" in relations between parents and children and teachers and pupils are pointed out by Lee and suggest the importance of clear understanding for improved relationships between youngsters and adults. In conclusion, Lee observes that communication is a two-way process requiring a willing listener and a speaker eager to make himself understood.

### Appraisal

The late Professor Lee, in his authoritative and captivating manner, presents a clear, analytic discussion of the characteristics and role of words in interpersonal communication. While some disappointment was registered by the previewing group in the lack of visualization in his presentation, especially in view of his use of a visual medium, Lee's ability as a "master teacher" to attract and hold attention and his exceptional competence as an authority in the field of general semantics were recognized by the members as sufficient in themselves to justify wide use of this film as well as others in the series. Certainly, classes in English literature, language arts, and social studies in high school as well as freshman classes in college would find this series appealing and helpful. Community adult groups who are working toward group consensus and collective action would do well to plan for a number of sessions dealing with some of the topics treated by this series of films—the nature of "good observation," making a statement of fact, the "disease of allness," and the difference between words and things. With Lee's untimely death, the series is likely to become classic in the field.

Many teachers are using these albums in classrooms and also recommending them for home study. Each ZODIAC album includes 3 unbreakable hi-fi 33½ rpm LP records, together with the text and translation, delightfully illustrated.

# SOUND advice

about audio materials  
 and equipment

by **MAX U. BILDERSEE**

Adlai Stevenson, on the "MEET THE PRESS" telecast of May fifth, made a statement which should challenge all teachers because it is, in a sense, a criticism of the schools and education. He said, "I have sometimes suspected that the greatest problem in our country today with respect to conduct of public affairs is the problem of communications." We as teachers are constantly dealing with communications in each daily school session and it behooves us to give our students an understanding and an appreciation of the media of communications which today impinge on all living in these United States. Particularly, radio and television are the greatest mass media and we must, as teachers, help our students learn to listen carefully and intelligently if our American schools and teachers are going to successfully do the tremendous task which we have accepted as our contribution to the democracy in which we live and work.

In both the April and May issues, we reported the question that has been posed to tape recorder manufacturers, along with some of the responses. The question was: "Can you tell me how best to adapt your school model tape recorder for group pickups and for use of low impedance microphones?" Reports from the Bell and Howell Company and the Revere Company were cited in April and those from Ampro, Bell Sound Systems, Columbia Records, and Mark Simpson Manufacturing Company, were quoted last month. And responses continue to come in.

Webster Electric Company of Racine, Wisconsin, suggests, "that by using the microphone mixer Model SS480A satisfactory results can be obtained." They go on to say, "By using the microphone mixer, a total of four low impedance microphones can be used, each microphone with its own volume control. In this way, more than one microphone can be spaced at the proper positions in recording

high school choruses and soloists."

Webcor gives specific information which can be extremely useful to all tape recorder users. Although they do not specifically answer the question as we phrased it, enough information is already in your hands to make the following statements really significant.

"When selecting a microphone, remember these important points:

**"Application:** Music-dynamic (or ribbon) type will best produce wide frequency response and full dynamic range. Voice—crystal, ceramic and carbon types can be used. For outdoor use—choose microphone with blast (wind) filter.

**"Output Level:** Since numbers are negative, —50db indicates greater output than —55db. P.A. amplifiers—have adequate amplification for any microphone listed. Tape recorders—microphones for home types should have an output of at least —55db. (similar to the one supplied by WEBCOR) to minimize effect of amplifier hum. Use a microphone with an output of —60db or more for professional-type tape recorders.

**"Impedance:** High-impedance microphones—suitable for tape recorders if cable is about 20 feet or less; can be used with P.A. amplifiers with cable up to approximately 50 feet. Greater length generally results in noticeable increase in hum. Low-impedance microphones—can be used with cable length of several hundred feet. Use matching transformer to connect low-impedance microphone to high-impedance input.

**"Crystal Microphone:** Fairly high output—efficient for low-cost general recording and P.A. Good for voice and music.

**"Ceramic Microphone:** Similar to crystal, except impervious to high temperature and moisture; has lower output level.

**"Dynamic Microphone:** Most rugged—withstands extremes of heat, moisture and hard usage. Best for music and voice.

# now

## audiotape gives you C-SLOT THREADING

... the fastest-threading reel ever developed!

### Only C-SLOT threading gives you these advantages:

- No kinks or loops in tape
- No "pigtails" to stick up and break off or cause reel to wobble when turned over
- No need to turn reel by hand to anchor tape

### PLUS these improved construction features:

- Smooth, unbroken rim — no slit to warp or bind
- Perfectly smooth inner surface — no sharp edges to catch or roughen tape
- Strong, non-warping construction — the ultimate in reel ruggedness

### HERE'S ALL YOU HAVE TO DO:

1. Insert tape through flange opening at top of C-slot.

2. Drop tape into slot, leaving about 1 inch projecting beyond the hub with tape slack on both sides of recording head.

### THEN PRESS THE "START" BUTTON!

Tape will grip and hold firmly . . . no need to turn reel by hand to anchor free end.

# audiotape *it speaks for itself*

AUDIO DEVICES, INC., 444 Madison Ave., New York 22, N. Y.

Offices in Hollywood and Chicago • Export Dept.: 13 East 40th St., New York 16, N. Y.

"Ribbon Microphone: Recommended for fixed location where it will not be roughly handled. Excellent for music and voice."

In answering our question the V-M Corporation offers the following recommendations for recording groups with the V-M model 710:

"The first recommendation was the use of a microphone having a cardioid pattern.

"Next, the microphone can be either high or low impedance. However, if a low impedance microphone is used, a matching transformer must also be used to match the high impedance input of the recorder.

"Since different recording sessions require the placement of the equipment in different positions, it would probably be an advantage to use a microphone that has a multiple output impedance, such as the Electro-voice, model 664."

Telectrosonic Corporation, speaking of their model 556 recorder says: "The gain of our Model 556 is much too low to enable one to use a high quality low impedance microphone. In order to use such an accessory, the user would have to utilize a separate preamplifier or possibly a mike transformer. Our recorder is not designed for such quality usage and nowhere do we even imply this.

"Our model 556 recorder is basically for voice and for the home."

The Sales Department of the RCA-Victor Corporation forwards the following information they obtained from their engineering division.

"For group pickups a multi-mike set-up can be used. Ceramic or crystal microphones can be paralleled with no additional amplifiers. Place the microphones at distances which will provide desired ratio of input signals.

"No modification is required for use of a low impedance microphone, just so that it will provide at least 2 millivolts signal to the recorder.

"We recommend SMC-2 microphone for improved performance on our 7TR2 and 7TR3 tape recorders."

The De-Jur Amsco Corporation offers the following information concerning microphone set-ups when using Tape Recorders, specifically their Model TK-820. They say: "Unfortunately, it is not possible for us to outline specific procedures as each situation requires a different approach. As you are well aware of, microphone set-ups for recordings of groups and soloists require considerable skill and individual matching.

"The microphone normally furnished with our TK-820 is our Model DM-11, which has a uni-directional cardioid pattern. Our other microphone DM 21 is available as an optional accessory and is an extended range omni-directional microphone. Both microphones are low impedance

devices and have impedance matching transformers, built into the line so that they may be connected to any high impedance in-put. The frequency range of the DM 11 is 60 to 12,000 cycles and that of the DM 21 is 40 to 16,000 cycles. The level on both microphones is -52db."

It is no difficult task to summarize these many reactions to a single question placed before the major manufacturers of school-used tape recorders. To begin with there is the inference, and occasionally the open statement, that the inexpensive portable tape recorder is not a "quality" machine in that it cannot be compared with more complex professional recorders such as are used by such professional groups as major recorders and broadcasters. There is the added inference that the typical school tape recorder is effective in the human voice ranges and therefore will reach its greatest school use where voices are to be recorded.

Multi-voice pick-ups require the use of several microphones, generally, particularly if the situation being recorded involves a soloist and chorus. This will be true whether a singing group or a speaking group is involved. In such a situation it will be desirable to use a "mixer" to which more than one microphone is to be connected. A three-position or four-position mixer is desirable. If the recorder is to be placed more than twenty feet (or thereabouts) from the microphones, then low-impedance microphones should be used. With most school-type tape recorders this will require the employment of a matching transformer between the mixer and the input of the tape recorder, and preferably as close to that input as is possible. Finally, on microphones we urge you to read again the information supplied by Webcor and quoted earlier in this summary of correspondence. They say, speaking of dynamic microphones, that these are "most rugged — withstand extremes of heat, moisture and hard usage. Best for music and voice." The facts that these are best for music and voice and that they withstand hard usage are telling selling points to us.

Finally, don't expect too much of your minimum price or medium price tape recorder. Just as station wagons are not built to haul pianos, so these are not built to record other than simple situations involving the human voice frequency range. Of course, you might get a piano into or onto a station wagon — and you might record a symphony orchestra on the school tape recorder using only a crystal or ceramic microphone in the balcony. But it is doubtful.

# New Filmstrips

## FAR WESTERN STATES SERIES

Encyclopedia Britannica Films, 1144 Wilmette Avenue, Wilmette, Illinois. Subject Area—Social Studies and Geography. Grade Level—Fourth to Eighth. Color—Number of Frames as Noted.

"THE NATURAL ENVIRONMENT" (52 Frames). This filmstrip deals with the topography, climate, and natural resources of the four states (Washington, Oregon, Nevada, and California) which combine to make the far western region.

Scenic pictures and geographical terms used provide for valuable discussion before, during, or after presentation of filmstrip and various related activities such as, making relief maps, making lists of rivers, etc.

"INDUSTRY" (52 Frames). A bird's eye view of industry in the four far western states. Very good color photography, and comprehensive captions under each picture. Could be utilized as a discussion starter for summarizing, or an initiating experience in studying industry in the Far West.

"THE PEOPLE AND THEIR HISTORY" (53 Frames). A short historical summary of the Far West, from Indians through Spanish, Portuguese, and Russian explorers, with emphasis on present day inhabitants. The historical review is unlikely to be meaningful unless the child has had an adequate background, however the portrayal of the people who live and work in the region today should prove valuable to the viewer.

"COMMERCE" (54 Frames). Shows interdependence of Far Western States and other regions of the country. This filmstrip also shows how goods are distributed within the region. Pictures composed of many good close-up shots as well as descriptive maps. The color captures scenes seldom noticed in textbooks; from Fisherman's Wharf in San Francisco to the Mexican Market in Los Angeles, and lumber in Oregon to Harold's Club in Reno, Nevada.

## SINGLE SUBJECT FILMSTRIPS

"THE MIDDLE EAST—AN OVERVIEW" Produced by Current Affairs Films, Subject Area—Social Studies—Grade Level—7 to 12, Black and White (41 Frames).

Excellent up-to-date pictorial and graphic presentation of European dependency upon the Middle East. Emphasis on oil and the Suez Canal;

Described and evaluated by **ROBERT CHURCH, WALTER PILDITCH, and HAROLD WARD.** Producers should send review copies of filmstrips to Robert Church, Audio-Visual Coordinator, Herman Felsenthal School, 4101 S. Calumet Ave., Chicago 15, Illinois.

some historical background leading up to as well as including the present day situation. Probable appeal to adult audiences as well as to junior and senior high school children.

"SIMPLE MACHINES" Produced by Visual Education Consultants, Madison 4, Wisconsin, Subject Area—Science, Grade Level 3-8, Black and White (21 Frames).

Describes each of the six simple machines; tells how and for what each is used. Terms to be explained, which make for better understanding, are at the beginning of the filmstrip.

Accompanying the filmstrip is a pamphlet which aids the teacher in explanation or discussion of each frame, and which has a list of questions and related activities for use after the filmstrip has been shown.

"THUMBELINA" Produced by Encyclopedia Britannica Films, Inc., 1144 Wilmette Avenue, Wilmette, Illinois. Subject Area—Language Arts,

Grade Level 3-5, Color (38 Frames).

Form of presentation includes text of story in written form complete, followed by illustrations at end of filmstrip. Separation of story and illustrations is questionable for use with lower grades for association of pictures with story. Colors used in illustrations are somewhat faint and faded. Would recommend preview and evaluation before anticipated purchase of this filmstrip.

## The Silent Filmstrip

When SVE told us it was going to produce sound filmstrips, and stated some reasons why, it also put part of the case for silent filmstrips. We appreciate Walter Johnson's reminder on this.

To summarize what SVE said, silent filmstrips are less formal; more under the control of the teacher; easier tailored to the purposes of the teacher and the needs of the group; puts the teacher into the teaching situation more definitely; and gives the teacher the role of bridging the gap between the known and the unknown. We heartily concur in these ideas.

The swing to sound filmstrips, we believe, has been the result of two forces. First, the local church worker prefers them. They are pre-cooked,

## We Did It This Way

FROM AGNES PEEBLES, Central-Covenant Presbyterian Church, Williamsport, Pa. Wanting a program on dating, our Junior Highs used the film, *Dating: Do's and Don't's* (Coronet, 13½ minutes; color) with considerable success. One of the junior highs introduced it as a good opportunity to watch for good and bad ways of doing things before or on a date.

Following the film, they practiced the correct ways of calling for a date, coming to the girl's home, serving refreshment, etc., by role-playing. Every member of the group had an opportunity to participate in some scene.

We wanted to use a film suggested by the Junior Hi Kit—*The Outsider* (Young America Films). It was not available for our date. Rather than change the subject, the chairman got together a group of young people and read to them the Kit summary of the film. The summary was good and they decided to present it by pantomime. The presentation was tops, and the discussion which followed was most spirited.

## What About Scholarship?

• Some knowledge of the findings of critical historical scholarship makes Biblical literalism pretty hard for some people to take, but never is it more diffi-

pre-packaged and ready to use — like stuff for her kitchen. They are supposed to be better. She is certain that they take less work. For these, and other reasons, she likes them.

Secondly, denominational A-V people have adopted them because they have something they want to say and they want it said that way undoctored by the user. It's his way of getting his message through to the 'customer' unchanged. And there is a place for this. We wonder if the church is the place. It's just the thing for the military, and sales promotion, but for the church, we wonder.

More on this at the coming Green Lake conference when the subject of "Which Media for Which Job" comes up for discussion at one of the 90-minute morning assemblies. — WSH

cult than when it comes in the form of pictures. They are so concrete, so definitive, so final! Objectivity becomes difficult for this reviewer when he sits down to three titles, about 34 frames each, by Alexark-Norsim (156 N. Arden Blvd., Los Angeles 4): *Moses I* — starting with the wilderness experience and going through the giving of the Second Tablets of Siani; *Moses II* — from the building of the Tabernacle to his death; *Joshua* — his whole career after Moses' death.

It is difficult to warm up to this style of art. Most frames are crowded, and some are cluttered. Few things are suggested; everything is crowded in somehow. If the narrative said there were a thousand tents, the artist tries to get them in. The idea of suggesting a vast number seems never to occur to this artist. Moses is represented as stiff, formal, aloof. Aaron is cut from the same cloth, only his beard is white. On top of pictorial literalism we have idealization: Fine horses and superb camels outfitted regally; and Moses, Aaron and Joshua, and the elders attired in costumes, not clothes.

But if this is what you are looking for in your Old Testament filmstrips, here it is and in a generous measure. This reviewer has a bias in favor of solid common sense and the findings of historical scholarship.

## Beyond Mere Showing

From W. R. MOORE, Central Baptist Church, Quincy, Illinois. One of the most effective uses of a filmstrip has been in conjunction with our course "Introduction to Teaching" (141a) where the filmstrip *Learn a Lot and Like It\** is used both as a teaching technique and as a vicarious life-situation examination.

The exam on the book is merely used to show the learners wherein they are weak. This exam is corrected by the student himself. He can share his views with others in the group as he sees fit, the instructor not seeing the pupil's paper at any time, thus removing any threat since no grade is given.

However, the real part of the examination is the filmstrip mentioned above. The early portion of the filmstrip is shown up to the point where the "Keystone" class loses its authoritarian type teacher with his lecture method. At this point the filmstrip is stopped and the students write out their idea of "What kind of a teacher the Keystone class needs." This gives them an opportunity to project the ideas they have learned and techniques they have used in class.

The filmstrip is then resumed and they are given the opportunity to see how satisfactorily they have solved the problem up to that point. Again, when the Keystone class in the filmstrip is confronted with the project and problem-solving type of approach under this new teacher, the filmstrip is stopped and the learners seek to discover "ways and means to help the 'Keystoners' work out the assigned areas of research and service."

\*88-frames, B&W; 18-min; 78 rpm-recorded; from denominational publishing houses; \$10.00 complete.

For The Most Complete Selection Of

*Religious Films*

Write for your free copy of our film catalog, THE PROJECTOR.

THE METHODIST PUBLISHING HOUSE

Atlanta 3    Baltimore 3    Chicago 11  
Cincinnati 2    Dallas 1    Detroit 1  
Kansas City 6    Las Angeles 12  
Nashville 2    New York 11    Pittsburgh 30  
Portland 5    Richmond 16  
San Francisco 2

Again the filmstrip is resumed and the learners can compare their approach and techniques with those of the filmstrip. This use of the filmstrip does several things:

It encourages the principle that learning is by doing. It enhances the theory that learning takes place best in a permissive atmosphere, under an acceptant leader, in a group process, and in reaching for problem-solving situations and satisfying goals. It suggests the theory that learning is not the addition of facts, but the sharing of series of experiences.

It uses the audio-visual technique as a teaching device, as a problem-solving process, and a measurement of learning achievement. It provides a satisfying series of learning experiences which usually leave the group feeling (attitudes) they have understood more of the teaching process, achieved additional skills, and created better attitudes toward teaching and learning — i.e., they have "Learned a Lot and Liked It!"

### Triumphant, Indeed!

Some one around the Presbyterian headquarters at 156 Fifth Ave., N. Y. 10, deserves an orchid for effort on the Sara Perkins film, *Prisoner Triumphant*, and a small cabbage for results! After a life time of service as a nurse in China, and four and a half years a prisoner in a Chinese Communist jail when she lived on little else than her Christian faith, this woman has something to say. And, despite a clumsy, formless, unstructured cinematic effort, she does say something and says it with humor, directness, charm and wonderful conviction. At last someone had the wit to do a film-interview of a notable servant of God but not the gumption to do a top job of it. It is obvious that next to no planning was put into it by the client and no imagi-

nation at all was used by the producer. This type of film — and they have a future — must be planned in advance and carefully structured. This can be done by someone who knows films and not by some well-meaning and hard-pressed board secretary. At any rate, let's toss the orchid and withhold the cabbage, for Sara Perkins can come right into your church and speak (via this color film) to all kinds of groups for only \$5.00, but a fraction of what her transportation would be. Besides, she deserves some consideration and ought not be expected to traipse all over the country to speak to assorted church groups who can be effectively reached by one of the mass media.

### Over-View Of Worship

Prepared for a unit of the Church and Home curriculum of the E & R Church, *Our Service of Worship* is a full-color photography filmstrip of some 82 frames which has considerable usefulness for those trying to give either youth or children an over-view of Protestant worship. The printed commentary is cast in the words of Judy who tells us what she learned about worship and its components, and also some of the reflections she had on this interesting new knowledge. There are two versions of the commentary — one for youth and adults and the other for children. The quality of the photography is uneven and at times none too well keyed to the commentary, demonstrating once again the real limitations of the pictorial form in filmstrips. (From Christian Education Press, 1505 Race St., Philadelphia 2, Pa.)

### Islam Film

*The Crescent and the Cross*, a 31-minute color film produced in the Near East, seeks to give a straightforward presentation of the religion of Islam via the experiences and observations of a young American couple who try and try but just don't quite become convincing. The faithfulness of the Faithful of Islam is supposed to jar this couple, and us, into a more acute awareness of the virtues of the Christian Way. Perhaps it will do that, when the audience is susceptible to this approach. Having just studied Noss's *MAN'S RELIGIONS I* found the treatment non-definitive and the photography a bit too selective — as when photos on a university campus lead us to believe that Islam women get an equal chance at education. In critical essence a religion is what it does and does not do for its adherents. Rather than this approach, we get a show-case version in which two over-dressed and self-conscious young Ameri-

cans spend far too much time packing bags, and fussing around, while tossing off a few facts about the religion of Islam — not having gotten below the surface in either pictures or thought. I recommend Noss. You can get half way through his chapter on Islam in 31 minutes! (Film available from any of the 14 offices of World Wide Pictures, P.O. Box 1055, Sherman Oaks, Calif.)

### Great Missionaries Series

We recommend the first two sound filmstrips in SVE's "Great Christian Missionaries" series — *Adoniram Judson*, and *Frank Laubach*. The first has 53 frames and the second 47, and the running time for the LP recorded commentaries is 17 and 12 minutes respectively. Both are in full color art which is up to acceptable standards in color and composition. The commentaries are well documented and narrated with average effectiveness. The musical background is good, but the sound effects add mighty little if anything to total effectiveness. The age-level is Junior and up, but the average teacher, with some careful preparation, can work out a shorter version of the commentary for Primary children. We recommend them for purchase by local

church A-V libraries because of their general usefulness with many groups in all seasons. Available with printed script as well as LP record.

### Now Is The Time

Local churches should be making note of the A-V materials which relate to the two mission study themes for this fall and winter. The themes are: Japan; and, Christ, The Church and Race.

SVE has announced three filmstrips in color photography on Japan: *Manachan and Koji* (Christian Children of Japan); *Tommy and Yoshi* (New Friends in Japan); and, *Close-Up of Japan*. The first presents every day experiences of a Christian family for use with Primary children. The second tells of the friendship of nine-year-old boys and is for the Junior age level. The last is keyed to youth and adult interests and presents general background information. They are available with or without LP recorded commentary. (To be reviewed in September).

Now is the time for A-V dealers to look into films and filmstrips on these two themes. Smart ones will ask local ministers and educators to help them decide what to buy and make available. The sharpest ones will tell the churches

very early about the material they have on these two themes.

And don't forget *Younger Brother*, BFC film on Japan tailored just for this year's study. It's for young people and adults. *Honshu Holiday*, also available from BFC, is a short film for Juniors, and, with careful use, the Primaries also. Libraries with *Kenji Comes Home* and *Fujita* on their shelves ought to dust them off and get them ready to work.

### Integration Documented

*A City Decides* is a 27-minute B&W dramatic documentary film on how the people of St. Louis integrated their public schools. The continuity is the experience and the view of one teacher as the process moves along, through an incident, to a plateau of great promise. Since it **does** not say what other communities should do, being content with effective reporting, this film would be just the thing for groups and clubs of men and women within and without the church. What a bright spot it would be in program desert of most men's service clubs! Nice piece, too, for that men's club in your church. (From Contemporary Films, 13 E. 37th Street, N.Y. 16)

### Stewardship For Children

*The Candlemaker* is a delightful 15-minute film in full color and animation, a film for children that gives the concept of stewardship the light touch — delightfully light but definitely lasting. It was produced in England at the Halas & Batchelor Cartoon Film Studios for Lutheran Laymen's Movement for Stewardship, 231 Madison Ave., N. Y. 16. The cartooning is delightful. It is naturalistic and artful but not the least bit in the mood of caricature, a glaring weakness in many American cartoon films. The music is psychologically geared to the story and does not seek to bruise and batter the consciousness of the viewer — as so much American film-music does. In this reviewer's book an A-plus for *The Candlemaker*, and congratulations to Henry Endress, and others, on its production. (Cathedral films, Inc. will distribute generally; rental \$10.00; try your local film library.)

Efficient Sunday school workers should know about . . .

## Broadman's SUNDAY SCHOOL AGE GROUP SERIES filmstrips!

These filmstrips answer many questions for those who work in Sunday school:

1. What is the purpose which motivates work in the different age groups?
2. What are the needs of a specific age group?
3. What are the best teaching methods for that group?

4. What are the supplies and equipment needed to carry out an effective program in the group?

5. What is the proper way to use available materials?

6. How should a class or group be organized?

7. How should the desired results be obtained?

Each of these exceptional full-color filmstrips has 40 single frames and comes with two manuals for the narrator's use.

Filmstrips in the series are:

- CRADLE ROLL SUNDAY SCHOOL WORK
- BEGINNER SUNDAY SCHOOL WORK
- PRIMARY SUNDAY SCHOOL WORK
- JUNIOR SUNDAY SCHOOL WORK
- INTERMEDIATE SUNDAY SCHOOL WORK
- YOUNG PEOPLE'S SUNDAY SCHOOL WORK
- ADULT SUNDAY SCHOOL WORK
- EXTENSION DEPARTMENT SUNDAY SCHOOL WORK

Each \$5.00; set, \$35.00

**VICTOR GUARDOMATIC SAFETY FILM TRIPS**  
go into action

With Victor's exclusive Guardomatic Safety Film Trips always on the job, your films are completely safe. Valuable films are safeguarded so your film budget can go toward building a finer film library, rather than buying replacement film. This Victor feature increases projector usage because it builds teacher and student operator confidence.

Check ALL these advantages of Victor 16mm Projectors:

1. Easy 1-2-3 threading and operation
2. Hi-Lite optical system for maximum screen brilliance
3. Sapphire-tipped shuttle for longer service
4. Lubrimatic Oil System with one-spot filling
5. Still picture, reverse, power rewind, and many others

Light weight High-Fidelity "Cine-Voice II" Sound Camera can go anywhere, operates from house current or car battery.

New professional turret of "Cine-Voice II" manufactured to highest precision standards and designed to take heavy-weight professional "C-Mount" lenses; can also mount zoom-type lens, as shown above.

\$795.00 complete including professional "Cine-Voice II" Optical Sound-On-Film Camera with Single-Lens-Mount, High Fidelity Microphone, Amplifier, Headphones, all batteries and tubes, professional heavy-duty fibre Carrying Case, and Instruction Book. Camera uses "C-Mount" lens (not furnished) same as most 16mm Cameras

# Announcing THE NEW AURICON CINE-VOICE II

16mm SOUND-ON-FILM CAMERA

with Professional Heavy-Duty 3-Lens Turret

Auricon proudly presents the new "Cine-Voice II", a worthy successor to the versatile Cine-Voice I now in use by Newsreel Cameramen and Film Producers all over the world.

The "Cine-Voice II" is available in a choice of models to suit a variety of filming requirements, such as...

- ★ Self-Blimped Camera for picture only, runs synchronously with double-system sound recorder.
- ★ Self-Blimped Camera for Single-System Sound-On-Film. Shoots picture and optical sound-track on same film at same time.
- ★ Self-Blimped Camera for Single-System "Filmagnetic" Sound-On-Film. Shoots picture on film carrying magnetic stripe.
- ★ Combination of Optical or "Filmagnetic" Single-System Sound-On-Film. Camera is quickly converted from Optical to "Filmagnetic" Sound without the use of tools.

Please write to BERNDT-BACH, INC., 961 N. Mansfield Ave., Hollywood 38, California, or phone HOLLYWOOD 2-0931 for free "Cine-Voice II" literature and prices.

# F & B FILM REPAIR and SPLICING BLOCK

Every School Needs One  
\$19.95

NOW — YOU CAN REPAIR TORN — DAMAGED FILMSTRIPS & MOVIE FILM USED WITH NEW MAGIC MYLAR SPROCKETED TRANSPARENT SPLICING TAPE

- **ECONOMICAL**—repairs torn slide-films and movie films, without loss of a single frame.
- **EFFICIENT**—replaces torn or missing perforations—without loss of a single frame.
- **SAFE**—prevents regular lap splices from opening.
- **INGENIOUS**—makes butt splices in 16mm or 35mm film.
- **VERSATILE**—includes a complete 1/4" magnetic tape splicing block.

- **ACCURATE**—provides 100% registration of sprocket holes.
- **NON-MAGNETIC**—aluminum construction insures perfect safety for handling magnetic or magno striped film.
- **INVISIBLE**—optical transmission of spliced or repaired frames unaffected.
- **DURABLE**—tear strength greater than film.
- **CLEAN**—self-sticking—no cements required, no adhesive bleed.

- **SUPER-THIN**—only 1.5 mils thick—passes thru projectors easily.
- **SOLVENT-RESISTANT**—commonly used film cleaners will not loosen tape.
- **UNIVERSAL**—can be used on all types film base.

## MAGIC MYLAR TRANSPARENT SPROCKETED SPLICING TAPE

16mm—Single or double perf. 66 ft. roll ..... \$5.00  
35mm—66 foot roll ..... 9.00

## FILMSOUND SPECIALIST...why it's the world's leading sound projector!

More schools and churches use Filmosound projectors than any other type. The reason lies in the machine itself.

You get a combination of exclusive features that meet the toughest teaching requirements. For example, the Filmosound Specialist offers:

- 1** 400% longer life—critical film-handling parts are surfaced with genuine sapphires.
- 2** Easiest and fastest set-up—top mounted reel arms with no overhang; safe, smooth tilt mechanism.
- 3** Full complement of controls—still-picture clutch and reverse

let you review whole scenes or stop to discuss a single frame.

- 4** Sharpest picture—straight-line optical system; 5-element lens; rhodium reflector.
- 5** Quality sound system—big 8-in. speaker; 15-watt amplifier.
- 6** Trouble-free operation—all-gear drive; three film sprockets; metered lubrication.

Ask your Bell & Howell Audio-

Visual dealer for a demonstration. He's listed in the yellow pages of your phone book. Or write for complete information, Bell & Howell, 7117 McCormick Rd., Chicago 45, Illinois.

**CREDIT** — where credit is due!

We hate making a faux pas (who doesn't?) and when we do we hate admitting it, (ditto) but we made a neat one recently and we hereby apologize.

It's about a letter recently received and from which we quote: "I'd like to thank you for the way in which you handled my two articles in Educational Screen for the last two issues. The presentation was fine.

I have one comment that I believe should be made. When I submitted these articles to June Sark (former managing editor) a few months ago, I requested that the Audio-Visual Center at Indiana University be given credit for the photographs involving people in each article. These shots were stills made as part of our film production program. I would appreciate some mention about these picture credits in a forthcoming issue. Thanks very much."

Jerrold E. Kemp

Production Supervisor  
Audio-Visual Center  
Indiana University

There is a saying — "if you're looking for an excuse, one is as good as another." So we won't try to excuse ourself. We should have caught that, but we didn't and we're sorry. Editor.

**AU REVOIR  
Wilber Emmert**

It was with a mingling of gladness and regret, that we learned of the retirement of Wilber Emmert from the post of Film Service Director at State Teachers College, Indiana, Pennsylvania.

We were glad that he is to enjoy at last — the leisure that he has so conscientiously earned. We regret that the College and the Audio-Visual move-

ment is to lose so active and gifted a participant.

In September of 1940, Mr. Emmert founded the Film Service at Indiana, which supplies sound films to churches, schools and other organizations. The Film Service, which has been built from nothing to a \$100,000 replacement value, serves not only Pennsylvania, but other surrounding states.

In the same year, Mr. Emmert initiated the Saturday night feature pictures, popular with ISTC students.

Before the local radio station was started, Mr. Emmert was the coordinator of the college radio programs and station WHJB at Greensburg, Pa.

During his career, he was also President of Roundtable of PSEA, President of the National Department of Audio-Visual Education of NEA and has been active on state and national committees of audio-visual work.

Throughout all these years, no one has been a more loyal and consistent supporter of Educational Screen and although Mr. Emmert will no longer be active in AV work, we know his interest will endure and we hope he will let use hear from him sometime.

**DON'T STOP!**

Now that you are this far, turn a few more pages and you will see how we have *literally crammed* Convention News into this issue in an effort to render an additional service to our readers. Read what each of the seven Audio-Visual groups are planning to do and when. Get a visual lineup on the Exhibitors and learn about the latest developments in Audio-Visual products. It's going to be a great show; a stupendous get-together of Audio-Visual specialists in the fields of Agriculture, Industry, Science, Church and School. We hope you will be there to enjoy it.

# WHICH full closure blind is best for your Audio-Visual Room?

1

2

Where optimum darkness is required your Audio-Visual room should be equipped with the Levolor A.V. Blind identified here as No. 1. This venetian blind has light shields and fascia (or light seal). Where normal darkness will suffice for projection purposes, the Levolor A.V. Blind identified as No. 2 is recommended. Closure is the same as No. 1 but a light seal is used at the head and there are no light shields.

Should you purchase blind No. 2 you can at any time add the light shields.

\* \* \*

Full details and specifications will be sent on request. Write to Audio-Visual Department, LEVOLOR LORENTZEN, INC., 720 Monroe Street, Hoboken, New Jersey.

Be sure to specify

**"Too Much Enthusiasm"  
Begets Enthusiasm**

*Editor:* Congratulations on your *Screen* editorial, "Too Much Enthusiasm." Foundation influence (and money) is in the dubious position of riding its own enthusiasm for educational television far beyond the point of good educational judgment. To carry your quote of Ralph Steetle one step farther, if educational television survives it will be *in spite* of its affluent enthusiasts.

Godfrey Elliott

President  
Young America Films, Inc.

*Editor:* Your editorial entitled "Too Much Enthusiasm" in the last issue of *Educational Screen* is certainly an excellent plea for more perspective in the literature on educational television. Congratulations!

I should like to see *Educational Screen* continue its efforts to publish reports of experience and experiments with the television medium which will help educators these days make a common sense appraisal of what it can and cannot do.

Ford L. Lemler, Director  
Audio-Visual Education Center  
University of Michigan

*Editor:* Your editorial, "Too Much Enthusiasm" was a fine one. I feel, too, that J. Stoddard is letting his enthusiasm carry him beyond the bounds of good judgment.

That statement by Ralph Steetle to the effect that educational television was so great and good that it would survive its enthusiasts is a wonderful one.

Stephen M. Corey, Dean

Teachers College  
Columbia University

*Editor:* I enjoyed your editorial "Too Much Enthusiasm."

In our St. Louis area we have a great deal of enthusiasm for educational television, but we also have much skepticism. I feel the over-enthusiasm for TV causes skepticism which could be prevented if we carefully analyzed television's potentials.

A second concern of mine is the manner in which teachers are evaluating TV. If television is as good as the evaluation cards say, "we have arrived." I wish we might do more to give teachers an idea of how to evaluate a TV school program.

Lee E. Campion, Director

Audio-Visual Education Dept.  
Cooperating School of  
St. Louis County Missouri

## **Welcome — All — To The 1957 National Audio-Visual Conventions**

Educational Screen & Audio-Visual Guide takes special pleasure in welcoming this great joint meeting of the principal professional and trade organizations dedicated to the furtherance of audio-visual communication. It is truly AV's "greatest show on earth". The participating organizations are to be congratulated on their emphasis, in this year's programs, of better and broader public information on the audio-visual idea. This year's joint arrangements and inter-related programs seem to mark a new high in mutual recognition and cooperation.

Our publication takes what we trust is pardonable pride in its advocacy, eleven years ago, of the dawning idea of contiguous conventions. In September, 1946, editor Paul C. Reed devoted a half-page to his impressions of the NAVED Trade Show and the evidence he felt it presented of growing understanding between commercial and educator interests. After high tribute to the "growth in the feelings of mutual respect and confidence between the commercial men and the educators" as a "sign of maturity that has come in this field," editor Reed concluded: "Plans should be started right now for next year to bring together every educator and every person interested in the use of audio-visual equipment and materials. Here is a proposal.

"For 1947 why not jointly planned conventions of all the organizations in the field . . . All would plan conventions for the same time and in the same city. Each organization would retain its own identity and have its own meetings. But there would be joint meetings for a maximum interchange of ideas and experiences, and there would be a single trade show to serve the interests of all. Such a combination of conventions would be so significant and important that no one interested in the field of audio-visual education could afford to miss it. It would be the one great date of 1947 for all who are visually minded."

The emphasis was in the original. Ten years later that emphasis still stands. Welcome — all — maker, seller, buyer, user — of the myriad devices and materials and methods and techniques that, interwoven, constitute today's audio-visual arsenal and tool-box.

# National Audio-Visual Association

William (Bill) Gove, vice-president of EMC Recordings Corp. of St. Paul, Minn., who will be the main speaker at the National Audio-Visual Association meetings during the National Audio-Visual Convention and Exhibit in Chicago July 20-23.

## Breakfasts Highlight Convention Programs

Breakfasts in the beautiful Terrace Casino, one of the outstanding meeting rooms in any American hotel, will begin each of the two General Sessions of this year's NAVA Convention program. Special entertainment will be provided in "wake up" programs during the breakfasts, according to an announcement of convention plans by General Chairman William W. Birchfield of Montgomery, Alabama.

The breakfasts are scheduled beginning at 8 a.m. Saturday, July 20, and Monday, July 22. NAVA members will have their choice of a special buffet breakfast at \$1.60, tip included, or can order from the regular Morrison menu. A farewell "Aloha Brunch" is planned for Tuesday morning, with some extra-special entertainment to be announced.

The famous Mid-States Four male quartet, managed by Marty Mendro of Midwest Visual Equipment Co., Chicago, will put on one of their hilarious shows Saturday morning. And on Monday, Dick and Marianne Stannard, NAVA members from Detroit who are former professional entertainers, will appear in what is sure to be a crowd-pleaser.

General sessions of the convention will be held right in the same room each morning at 9 a.m., immediately following the breakfasts.

## SATURDAY, JULY 20

- 8:00 a.m.—**Buffet Breakfast in the Terrace Casino**  
Stereo tape music to play during breakfast  
Entertainment: Mid-States Four male quartet
- 9:00 a.m.—**First General Session**  
Presiding: Ainslie Davis, President of NAVA
- 9:10 (to 9:31)—**Keynote Address: "PR—Paved Road to Success"**  
Dr. John A. Hunter, Dean, Junior Division, Louisiana State University, Baton Rouge, La.
- 9:32 (to 9:58)—**"Working with Press, Radio & TV"**  
Henry C. Ruark, Jr., Director of Information, National Audio-Visual Association, Inc., Fairfax, Va.
- 10:00—**Stirring band music via stereo tape—to pep 'em up**
- 10:01 (to 10:29)—**"The Ohio Program"**  
Dr. Clyde Miller, Director, Division of Audio-Visual Education, State Department of Education, Columbus, Ohio
- 10:30 (to 10:59)—**"Effective Advertising and Sales Promotion"**  
P. Ray Swank, President, Swank's Inc., 621 N. Skinker Blvd., St. Louis 5, Mo.
- 11:00 a.m.—**Adjourn for the day**  
Stereo tape to play while crowd goes out
- 11:00 a.m. to 6:00 p.m.—**Trade Show open**
- 9:30 p.m.—**The Annual NAVA Dance Party**  
(Hall opens at 9:30—dance orchestra plays 10 to 1)

## SUNDAY, JULY 21

- 8:45 a.m.—**Advisory Members' Meeting**
- 11:00 a.m.—**Audio-visual Church Worship Service**, sponsored by the Department of A-V and Radio Education of the National Council of Churches (Terrace Casino)
- 7:00 p.m.—**NAVA Religious Session**—closed meeting for NAVA members only
- At 6:50 p.m.—**Religious music starts to play with color religious slides on a screen.** This will continue until 7:00 p.m. The Stereo-tape music will be prepared by Ainslie Davis. Any music selections desired, please notify Ainslie.
- 7:00 p.m.—**Opening Prayer**—A. H. Parry, Deseret Book Company
- 7:00 p.m.—**Visual-Aid presentation**—Dr. James K. Friedrich. This will open to him for a presentation of his selection.
- 7:35 to 8:10 p.m.—**Discussion and visual presentation on Religious Advertising**—good and bad features by Rev. Harvey W. Marks.
- 8:10 to 8:20 p.m.—**Religious problems facing the religious field from the standpoint of the producer and supplier.** Beth Soffe. (Any problems you have, please send them to me.)
- 8:30 to 9:50 p.m.—**Workshop** by Brunson Motley and Dr. Donald R. Lantz
- 9:50-9:55 p.m.—**Closing remarks**—Beth Soffe (Thanks & etc.)
- 9:55 p.m.—**Closing prayer**—Rev. Milton Heitzman
- 10:00 p.m.—**Religious music by Stereo-tape**—no pictures—music only

## MONDAY, JULY 22

- 8:00 a.m.—**Buffet Breakfast in the Terrace Casino**  
Entertainment: Stereo tape music to play during breakfast.  
Dick and Marianne Stannard will entertain.
- 9:00 a.m.—**Second General Session**  
Presiding: Wm. W. Birchfield, 1st Vice-President of NAVA and General Chairman of the 1957 Convention
- 9:03 (to 9:29)—**"Public Service is Good PR"**  
Bernard A. Cousino, Cousino, Inc., 2107 Ashland Ave., Toledo 2, Ohio
- 9:30—**NAVA Annual Business Session**
- 9:31 (to 9:41)—**A visualized report to our "stockholders,"** the members of NAVA
- 9:41 (to 9:50)—**Introduction of new officers**
- 9:51 (to 10:33)—**"The Case of the Curious Citizens"**—Premier Showing of New PR Slide Presentation  
Adrian I. TerLouw, Educational Consultant, Eastman Kodak Company, Rochester 4, N. Y.
- 10:35—**Address:** Bill Gove, Vice President and Sales Director, EMC Recordings Corporation, 806 East Seventh Street, St. Paul 6, Minnesota
- 11:00—**Adjourn to trade show.** Tape plays "G'bye now."

## TUESDAY, JULY 23

- 8:30 (to 10 a.m.)—**Terrace Room—"Aloha Brunch"**  
**Members of the Convention Committee**  
Chairman: Wm. W. Birchfield, Alabama Photo Supply; Ainslie R. Davis, Davis Audio-Visual Co.; James W. Bell, Calhoun Company; R. Hilton McCrory, Stanley Projection Co.; P. H. Julfarian, Audio-Visual Center, Inc.; C. W. Petty, Christian Film Service; Edwin P. Guerard, Palmetto Pictures, Inc.; John J. Dostal, Radio Corporation of America; Ann Vath, Audio-Visual Aids.

## EFLA 14th Annual Conference

"Making The Most of Our Resources"

The Educational Film Library Association was incorporated in April, 1943. At that time EFLA was under the wing of the American Film Center, which in turn was sponsored by the Rockefeller Foundation. L. C. Larson, who was working with the American Film Center during a leave of absence from Indiana University, was EFLA's first President. Others on the early Board of Directors included Edgar Dale, Marguerite Kirk, J. C. Boerlin, Patricia Blair, James Kinder, and Bruce Findlay. EFLA's purpose, as stated in its constitution, is "To promote the production, distribution, and utilization of audio-visual aids suitable for classroom, assembly, or forum use by educational and adult groups."

The official purpose, as stated above, is obviously general enough to cover a great variety of activities. However, EFLA has always attempted to carry on a program which will fulfill two main requirements: First, one which will be of practical value to the EFLA membership; and secondly, one which does not duplicate activities which can be more effectively undertaken by some other organization. Since EFLA's members are primarily film librarians, audio-visual directors, and those in charge of film programs in all kinds of institutions and organizations, the emphasis has been on providing them with services which will aid them in providing information, selecting materials, and administering film libraries and film programs. Among these services are Film Evaluations, publication of the EFLA Bulletin, compilation of selected film lists, publication of the EFLA REDBOOK OF AUDIO-VISUAL EQUIPMENT, film damage insurance, Film Can Guides, annual and regional Conferences, and various special projects.

Best known of the EFLA services is the Evaluation Project. The first EFLA Evaluations were published in 1946, using a form designed by Edgar Dale. Originally the Evaluations appeared on 8½ x 11 sheets; since 1948, however, they have been printed on 3x5 cards punched for use in a standard library file. Over 3200 different 16mm films have been evaluated, and members receive forty new cards each month during the school year. The cards are also used by some members as catalog cards, accession cards, and to distribute to individual schools instead of printing a catalog of the central film library. Cards may be obtained by members, singly, in yearly sets, or in quantity, to fit their own needs.

EFLA has about fifty Evaluation Committees located at EFLA member institutions in all parts of the country. The Committees indicate what kinds of films they are particularly interested in, and new releases are assigned to them. Producers cooperate by sending preview prints of new films to the Committees, and most producers hold Service Memberships in EFLA so that they receive copies of all the Evaluations as they are issued. Evaluations are prepared according to a set of standards which has been evolved during EFLA's long experience in this activity. Recently UNESCO wished to issue instructions for film evaluation on an international basis, and asked EFLA to prepare a Manual on the subject. This was done, and the Manual has been published in English, French, and Spanish.

Membership in EFLA is of several different kinds. There are Constituent, Service, Personal, International, and Sub-Members. By far the greatest number are Constituent members. These are nonprofit, educational institutions or organizations, and among them are schools, colleges,

universities, public libraries, art galleries, museums, labor organizations, religious groups, and national and local organizations of all kinds. Service members are commercial organizations, chiefly producers and distributors of 16mm films. Personal members are individuals who are interested in the 16mm field. International members are the official government organizations in other countries which are primarily concerned with films or with audio-visual education. Sub-members are additional memberships within an organization which already holds a Constituent or Service Membership. It should be noted that, with the exception of Personal Members, all these categories are for organizations rather than individuals.

Only the official representatives of Constituent Members may vote or hold office in EFLA. The Board of Directors consists of nine members, of which three are elected each year to serve three years. The Board then elects the officers of the Association from its own membership. Present officers are:

President: Erwin C. Welke, Head, Audio-Visual Extension Service, University of Minnesota; Vice-President: Mrs. Wanda Daniel, Department of Instruction, Board of Education, Grosse Point, Michigan; Secretary: Mrs. Carol Hale, Director, Audio-Visual Aids Service, Girl Scouts of the U.S.A.; Executive Secretary and Treasurer: Emily S. Jones.

(L to R) Emily Jones, Executive Secretary; Garrett P. Weathers; Erwin G. Welke, President; Wanda Daniel, Vice President; Elliott Kane.

Other Board Members (three new members will be elected in June): Mrs. Muriel Javelin, Boston Public Library; Elliott H. Kone, Audio-Visual Center, Yale University; F. Edgar Lane, Instructional Materials Center, Dade County Schools, Miami, Florida; Austin Olney, Audio-Visual Center, University of New Hampshire; Miss Cecile Starr (she became Mrs. Aram Boyajian on June 3), Garrett R. Weathers, Director of Audio-Visual Education, South Bend, Ind., City Schools.

EFLA's goals for the immediate future are to increase and improve its present services, to expand the Evaluation project as much as possible (and possibly to evaluate filmstrips and recordings as well as films), to cooperate with other groups in such wide-scale activities as those of the Audio-Visual Commission on Public Information, and to develop new projects to fit the needs of its members. One project which is in preparation is a Manual on Film Library Administration, to be published in the fall.

EFLA's unique position as the only organization to cut

# Educational Film Library Association

across all subject and age level classification in film use makes it particularly concerned with the improvement of standards for all types of films and other audio-visual materials. What EFLA wants might be summarized as "More and better films — and more and better ways to use them."

In order to give everyone a chance to make a thorough examination of the Trade Show, and still get back to work (or vacation) by Monday morning, EFLA will open its meeting on Thursday morning, and will close with a special summary luncheon on Saturday. The Trade Show will be open on Saturday afternoon for the special benefit of EFLA members. Our special guests this year are from the fields of mental health and conservation. We will also have a section on religious film use. These sections will provide an opportunity for audio-visual directors, film librarians, producers, and distributors to exchange ideas on the increase and improvement of audio-visual use in these important areas.

The "Do-It-Yourself" Sideshow was such a success last year that it is being repeated by popular demand, with some new and intriguing demonstrations. We have more space for the Side Show this year, and can provide better facilities.

## THURSDAY, JULY 18

- 9:00 a.m.-6:00 p.m.—Registration—EFLA Office
- 10:30-12:00 a.m.—Screening: Art and Experimental Films
- 2:00- 3:15 p.m.—General Session
- 2:00- 2:10—Introduction—Verne Stockman, Conference Chairman
- 2:10- 2:30—Welcoming Address—Erwin Welke, EFLA President
- 2:30- 3:15—Keynote Speaker—Thorald Dickinson, Chief of Radio and Visual Services Division of the United Nations' Department of Public Information
- 3:30- 5:00 p.m.—Briefing for Program Participants  
Verne Stockman and Emily Jones
- 5:15- 6:30 p.m.—EFLA Board of Directors meeting
- 8:00-10:00 p.m.—Screening and Evaluation: Classroom Films  
Chairman: Violet Auwarter, Jacksonville, Illinois Schools  
Evaluators: Betty Stoops, Wayne University, and Others  
Films: To be shown
- 10:15-11:30 p.m.—Reception

## FRIDAY, JULY 19

- 9:00 a.m.- 6:00 p.m.—Registration—EFLA Office
- 9:30-10:15 a.m.—"Using Closed Circuit TV in the Classroom"  
Chairman: Donald Smith, University of Illinois  
Demonstrator: Wanda Mitchell, Evansville, Illinois Township High School
- Panel: Dr. John Stoddard, Fund for Advancement of Education (tentative); Godfrey Elliott, Young America Films; John Howland, Dage TV (tentative)
- Film: Closed Circuit TV in Hagerstown
- 10:30-12:15—Sectional Meetings: "Exploring AV Resources in—"
- A. Conservation  
Chairman: B. K. Barton, Director of Conservation Education, State of Illinois  
Panel: John Hood, Educational Consultant, Michigan Department of Conservation; Wilbur Stites, Wisconsin Dept. of Conservation; Art Jorgenson, Education Specialist, Wisconsin Department of Conservation; Minot Silliman, Area Conservationist, Soil Conservation Service, Joliet, Illinois; Brockett Bates, Division of Education, Department of Conservation, Illinois
- B. Religion—"Segregation or Crossover? Films Made for Church and for School"  
Chairman: William Kruse, Family Films  
Panel: Donald Smith, AV Center, University of Illinois; Shirley Ellis, Chicago Public Library; Paul Foght, President, Ideal Pictures
- C. Mental Health  
Chairman: Dr. Freda S. Kehm, Director, Association for Family Living, Chicago  
Panel: Mrs. Warren E. Potter, Mental Health Chairman, Illinois Parent Teachers Association; Edward Linzer, Director of Educational Services, National Association for Mental Health; Charles R. Meeker, Assistant Deputy Director, Mental Health Service, State of Illinois; Norman B. Moore, Rochester Public Library

1:30- 3:15 p.m.—General Session: "EFLA and Its Role in the AV Field"

EFLA Newsreel—Part I—EFLA'S FIRST SEVEN YEARS—filmstrip; Part II—THE SECOND SEVEN—Visual presentation

"EFLA Works with Other Organizations Through AVCPI"—Charles Schuller, Michigan State University, and Chairman, Audio-Visual Commission on Public Information

"Last Year and Next Year"—Executive Secretary's Report Annual Business Meeting: Erwin Welke, President of EFLA

3:30- 5:30 p.m.—Do It Yourself Show: Goldmine of Ideas for Making AV Materials

Chairman: Harvey Frye, Indiana University

8:00-10:30 p.m.—Screening: Adult and Special Interest Films  
Chairman: Clarence Tyndall, Brigham Young University (tentative)

Mental Health Film: KID BROTHER (tentative); Evaluator: Dr. Freda Kehm, Assoc. for Family Living

Conservation Film: WOODEN DOLLARS; Evaluator: Art Jorgenson, Wisc. Dept. of Conservation

Religious Film and General and Adult Films to be shown and evaluated

## SATURDAY, JULY 20

9:00 a.m. to 12 m.—Registration—EFLA Office

9:30-11:00 a.m.—Sectional Meetings:

A. How EFLA Evaluations Are Prepared

Chairman: Emily S. Jones

Demonstration Evaluators: Vincent Jukes, Director AV Service, Ohio Univ., Athens; George McIntire, Michigan City, Ind. Schools; H. L. Kooser, Iowa State University, Ames, Iowa; George Cole, Trenton, N. J. Public Schools; Austin Olney, University of New Hampshire, Durham

B. Different Procedures in Film Selection

C. Training Student Teachers in AV Methods—Chairman: L. C. Larson, Indiana University

D. Problems and Possibilities in In-Service Training

E. Minimum and Optimum Standards in Buildings and Equipment—Chairman: Helge E. Hanson, Dearborn, Mich. Public Schools

11:15-12:15—General Session: Making a Visual Presentation on AV to a Lay Audience"—Demonstration by Adrian Ter Louw, Educational Consultant, Eastman Kodak Co.

12:30- 2:00 p.m.—Closing Luncheon and Summary of Conference:  
Speaker: Dr. Clyde Miller, State Director of Audio-Visual Education, Columbus, Ohio

2:00 p.m. on—NAVA Trade Show

## SUNDAY, JULY 21

11:00 a.m.—Morning Worship Service: Sponsored by Religious Audio-Visual Conference

EFLA registrants are welcome at this and other events held by AV organizations holding concurrent meetings at the National Audio-Visual Conference

"Our guest speaker was called away suddenly . . .

but he made a tape recording of his speech."

# A-V Workshop for Industrial Training Directors

The Illinois Training Directors Association, an affiliate of the American Society of Training Directors, will stage its third annual Audio-Visual Workshop on Monday, July 22nd. This event is being planned in conjunction with the convention and trade show of the National Audio-Visual Association being held at the Morrison Hotel in Chicago, July 20-23, 1957.

The workshop is scheduled for 9:00 A. M. in the air conditioned Venetian Room.

Following a keynote address by an authority on the learning processes, the program will feature: (1) "Producing Your Own Training Film on a Low Budget"—how a couple of Standard Oil (Ind.) staff people went about making a sound motion picture on a safety problem at surprisingly low total cost. (2) "Preparing Slide Films in 3 Minutes"—a new technique developed by the Polaroid Corporation, makers of the popular Polaroid Land Camera. (3) "Navy Use of Audio-Visual Aids"—training specialists of the Department of the Navy will demonstrate interesting and unusual applications.

The sponsoring organization, The Illinois Training Directors Association, is a byproduct of the Chicago Emergency War Council. This was an organization set up during the early days of the second World War to coordinate the many activities for the mobilization and training of civilians in the successful prosecution of the war effort on the home front. Out of this organization a number of specialized groups were formed, one of which was the Illinois Training Directors Association. In 1943 it elected its first President, Deb Gaines of the Philco Corporation. The 1956-57 retiring President is H. Leslie Swift of Swift and Company. President-elect is W. E. Bright, Jr., of The Pure Oil Company. The officers to serve with Mr. Bright during the coming year are; Gordon S. Sargent, Spiegel, Inc., Vice-President, Harold I. Pratt, American Steel Foundries, Secretary and William Welp, Blue Cross-Blue Shield, Treasurer.

ITDA states its purpose, "to advance the profession of education and training in industry and commerce. In striving for this objective, provisions will be made for the professional development of its members through the discussion of mutual training problems, the exchange of experiences, ideas and methods, and the general stimulation of interest in sound education and training. The association shall arrange meetings, publish papers, magazines or bulletins and cooperate with other interested organizations in such activities as may from time to time be decided by the Board of Directors in conformity with its purpose."

The organization now numbers some 180 representatives of business, industrial and educational institutions in Chicago and neighboring communities.

The Audio-Visual Workshop is a project of the Activity Committee. Mr. M. L. Mullins, Standard Oil Co. (Ind.) is Committee Chairman. Verne A. Larson, Assistant Regional Training Officer of the Post Office Department, is Chairman of the Workshop project. Assisting him are: J. Wesley Johnson of The Sherwin-Williams Company, Donald P. Smith of International Harvester Company and J. J. Stadtherr of The Pure Oil Company.

Other projects of the Activity Committee include the recent publication of a fifty-five page "Directory of Training Services," active participation in the Chicago Area Career Conference for high school students, and active support of the Annual Conference on Training in Business, Industry and Government at Purdue University.

# Chief State School A-V Officers

## A C S S A V O

The alphabet type name above stands for an Audio-Visual organization interested in the exchange of ideas, promotion of better Audio-Visual materials and their more effective use in the schools of the nation. The organization is composed of the official in each State Department of Education that is chiefly responsible for the State's Audio-Visual program. This includes full time people or those only giving a portion of their time to this field. The present officers are Garland C. Bagley, President (Georgia); Bill King, Vice President, N.J., and Dr. Floyd Brooker, Executive Secretary, Washington, D.C.

Mutual problems involving organization, finance, handling and distribution of films, in fact, every facet of Film Library operation from the acquiring of films to the proper utilization of the materials by the school is talked about and solutions arrived at. This exchange of ideas has been found to be interesting and helpful. The Agenda of the program stated for this summer (1957) which will be held at the Morrison Hotel, Chicago, Illinois, July 20-22 will include state progress reports and the findings of several committees doing research on mutual problems. These are: (1) How to do it, Dr. Clyde Miller, Chm., Ohio. (2) Cost Study, Mr. Arnold Luce, Chm., Minnesota, (3) Minimum State Requirement for Audio-Visual Education, Mrs. Altha Sullivan, Chm., Indiana, (4) State Building Codes, Bill King, Chm., N. J., (5) Joint Account, Joe Murphy, Chm., Mass., (6) Tape, Hugh Proctor, Chm., Texas, (7) Educational Television, Joe Murphy, Chm., Mass.

A philosophy or objectives of the organization were compiled and passed on by the membership early in its formation and are listed herewith.

1. To promote the production and use of various audio-visual materials and media in the educational program.
2. To encourage schools in the respective states to acquire materials and equipment which are essential to providing well-balanced meaningful learning experience to their students.
3. To foster the pre-service and in-service training of teachers in effective use of audio-visual materials and methods.
4. To lend encouragement and support to other associations, organizations, and agencies in those activities which are consistent with the general purposes of our Association.
5. To strive for the provision of facilities in school buildings which will make possible the effective and efficient use of audio-visual materials.
6. To work for more cooperative relationships between educators and the audio-visual industry to the end that the purposes of education are more adequately served.
7. To see to raise the professional standards of those responsible for supervising and administering the audio-visual program.
8. To encourage research and experimentation in the production and use of audio-visual materials and methods.
9. To exchange ideas and experience among the members and between the various State Departments of Education.

# A-V Conference of Medical & Allied Sciences

The veterinarian, the dentist, the pharmacist, the surgeon, the physician, the nurse, and the hospital administrator are users of audio-visual materials both as teachers and as practitioners. National organizations of these teachers and practitioners have seen fit to include the special problems of A-V communication as association responsibilities either through special departments or committees. In many cases the existence of such departments was not known to similar departments in closely related fields.

In 1953 representatives of these groups met to find out about each other and agreed that the relationship should continue by means of an annual conference. This conference is to be held at such a time and place that members might benefit from the programs of existing associations such as the Educational Film Library Association and the Trade Show of the National Audio-Visual Association. The original purposes of the Conference were established as:

- a) To exchange information on the A-V programs of member organizations, and
- b) To discover, disseminate and exchange descriptive and evaluative information on A-V materials and their application as related to the medical and allied sciences.

Membership in the A-V Conference is limited to two representatives each from national nonprofit and nongovernmental associations or groups devoting resources to A-V materials and programming in the medical and allied fields. Included is representation from the Canadian Film Institute and the National Film Board of Canada.

The present elected officers are J. Edwin Foster, Director of the Medical Audio-Visual Institute of the Association of American Medical Colleges; Miss Helaine Levin, Film Librarian, American Dental Association; and Daryl Miller, Assistant Director, Motion Pictures and Medical Television, American Medical Association.

The Conference is a one-day meeting, this year to be held on July 22nd. The topics for discussion include: a review of the 1956-57 programs of the member associations, developments in TV, bottlenecks in A-V use and how they can be broken, and an analysis of the Golden Reel (FCA) winner.

L to R. Daryl Miller, Assistant Director, Motion Pictures and Medical Television, American Medical Association; Miss Helaine Levin, Film Librarian, American Dental Association; J. Edwin Foster, Director of the Medical Audio-Visual Institute of the Association of American Medical Colleges.

# Religious A-V Workshop

Sunday, July 21, 1957

All who are interested in the best use of religious audio-visuals are cordially invited to attend the big coming event—the Religious Audio-Visual Conference to be held on July 21, 1957 in conjunction with the National Audio-Visual Association Trade Show. The program will begin at 11:00 A. M. with a worship service arranged by the National Council, Dept. of A-V and Broadcast Education. The use of audio-visual materials is emphasized, the visualized sermon being a presentation of the new Broadcast & Film Commission release, *BROKEN MASK*. From 2:00 to 3:00 P.M. there will be a session devoted to age level use of audio visuals with demonstrations by Mrs. Lee Lenzen, Director of Pre-School Education for the Flossmoor Community Church, Flossmoor, Illinois, Mrs. Virginia Smallman, Children's and Youth Worker for the Rock River Conference of the Methodist Church, Rev. Wendell Eller, Director of Audio-Visuals for the Church of the Brethren, and Rev. Milton Heitzman, minister of the First Congregational Church of Beardstown, Illinois, and formerly Associate Secretary of the Department of A-V and Broadcast Education of the National Council of Churches. Then, the moderator for the afternoon, who will be Dr. J. J. McCracken, Associate Secretary of the National Council of Presbyterian Men, will lead a panel of selected producers in a discussion of "Who's Producing What—and Why?" After a reception at 4:00 P. M. registrants will be at liberty to visit the Trade Show until 7:00 P. M. when Rev. Donald Kliphardt, Administrative Assistant of the Department of A-V and Broadcast Education of the National Council of Churches will conduct a demonstration of the evaluation process used in compiling their *Audio-Visual Resource Guide*. This will be followed by previews of new materials as time permits. Registration badges (NAVA, EFLA, etc.) will admit wearers to this Religious A-V Conference, as its badges, reciprocally, admit wearers to open sessions of these groups and to the Trade Show.

The Worship Service program has been arranged by the Department of A-V and Broadcast Education at national headquarters in New York, but since that department moved from Chicago all local arrangements as well as the afternoon and evening programs have been the direct responsibility of the Committee on Audio-Visual Education of the Church Federation of Greater Chicago. This committee has been active for the past 15 years as an agency of the Department of Christian Education of the Federation. Besides arranging the Religious A-V Conference at the annual National Audio-Visual Convention, the local group operates three film evaluation committees under the Audio-Visual Resources Guide program of the national department, conducts monthly preview meetings of new religious films, assists religious educators in application of suitable A-V materials—in general assists in coordinating the efforts of all audio-visual forces for more effective use of the medium in the total program of the church.

The chairman is elected by the Department of Christian Education of The Church Federation of Greater Chicago; other members are invited to join because of special interests and aptitudes such as librarians, producers, and active clergymen and lay people.

Present chairman is Mrs. Mae Bahr, Librarian for Religious Film Libraries—Chicago; Vice Chairman is Rev. Rudolph Hartman, minister of Second Presbyterian Church in Joliet and owner of Film Chapel. Outgoing chairman is Mr. Wesley Doe of the Baptist Film Library in Chicago. Public relations are in charge of Mr. Paul R. Kidd, and Mr. William Kruse.

# Religious A-V Workshop

## DAVBE Plans for Green Lake Workshop

Within the interdenominational frame work of the National Council of Churches, 30 Protestant and Orthodox groups coordinate their efforts in those areas of work wherein joint approaches are the most economical and effective. The beginnings of what is now the Department of Audio-Visual and Broadcast Education, were seen in the late 1940s as leaders in the member fellowships sensed the potential of these media for the church's total program.

Steadily expanding in its services through the years, DAVBE now offers a variety to national, area, and local leaders as well as producers, distributors, and manufacturers. The International Conference on A-V Christian Education (commonly called the "Green Lake Workshop") provides the continual cutting-edge for the church-related field around the world. The department continues to supply interdenominational, pre-production counseling for all interested independent producers. DAVBE operates the only comprehensive evaluation program for A-V materials of use in religious education and offers its information on a nonprofit basis to the entire field.

Projects in developing and training leadership in more effective A-V use are stimulated. Creative programming in Christian education radio and TV is planned and coordinated on a national basis with broadcast outlets on network and local levels. These are but a suggestion of the department's outreach.

The most recent and newsworthy developments in DAVBE's operations concern the 1957 International Conference, and the evaluation program for 1958. This year's Conference has undergone a rather complete review of its purposes and program. "The re-thinking of basic A-V issues" will set the theme for morning and evening general assemblies, with presentations by Dr. John Bachman, professor of A-V education, Union Theological Seminary (NYC); Dr. Lester Greenhill, associate director of the Instructional Research Program, Pennsylvania State University; and Mr. William Hockman, church editor of *Educational Screen & A-V Guide*, and director of Christian education at Glens Falls (NY) Presbyterian Church.

Seventeen and one-half hours will be used for seminars (advanced leaders and professionals in the field) and work groups (other leaders with less A-V specialization and/or experience). Delegates will also be able to preview materials from the world's largest collection of current, church-related A-Vs. The event returns to Green Lake, Wisconsin, this year September 4-10. Detailed booklets describing the 1957 Conference will be available during the NAVA Convention at the Broadcasting and Film Commission trade show booth.

The *Audio-Visual Resource Guide*, long the standard in its field of religious education, becomes a biennial publication with the completely revised 4th Edition (1958-59). Providing a single source of the evaluation program's information, the volume will be released in August 1958 and contain classified and detailed accounts of over 2500 motion pictures, filmstrips, slides, and recordings.

Edited from reports of 800 Christian educators in 50 committees across the country, these evaluations are available only through the AVRGE and its monthly channel for interim information, the *International Journal of Religious Education*. This periodical is the official organ for the Council's Division of Christian Education.

Further information on DAVBE services may be obtained from: Rev. Don Kliphardt, DAVBE, NCC, 257 Fourth Ave., New York 10, N. Y.

# Agricultural Audio-Visual Workshop

## Audio-Visual Workshop For Agricultural Leaders

SUNDAY, JULY 21

Morning—10:00—Registration

11:00—Audio-Visual Church Service

Afternoon—How to Make Your Own Flannel-Aids by Elmer S. "Flip" Phillips, Visual Aids Specialist, Cornell University.

—The ABC's of Colored Slide Production by Stig Stabe, Visual Aids Specialist, Rutgers University

—Attend Trade Show

MONDAY, JULY 22

Morning—How to Make Slides "On the Spot" (Polaroid Transparency System) by Kemon Taschioglou, Polaroid Corporation

—How to Take Better Pictures by John Creed, Graflex, Inc.

Afternoon—Second Session on:

—How to Make Your Own Flannel-Aids by Elmer S. "Flip" Phillips

—ABC's of Colored Slide Production by Stig Stabe

—Attend Trade Show

Elmer S. "Flip" Phillips, Visual Aids Specialist, Cornell University, will conduct a session on "How to Make Your Own Flannel Aids" at the 3rd Annual Audio-Visual Workshop for Agricultural Leaders. He is shown here preparing artwork for a magnet board.

The first Audio-Visual Workshop for Agricultural Leaders was held during the National Audio-Visual Association Convention in Chicago, July 25-26, 1955. Sponsorship for this program was given to COUNTY AGENT & VO-AG TEACHER magazine under the guidance of its editor, Gordon L. Berg.

The primary objectives of these annual Workshops are:

- 1) To help agricultural leaders gain a better understanding of what audio-visu-als can do for them and their profession.
- 2) To help agricultural leaders see their opportunities and responsibilities in the audio-visual field.
- 3) To help agricultural leaders make the most of the audio-visual tools they have.
- 4) To help expand the use of audio-visu-als in agricultural teaching and advisory work.
- 5) To make every agricultural leader a proficient mechanic of agricultural communications.

Those attending these sessions are county agents, agricultural extension specialists, vocational agricultural teachers, state agricultural education personnel, soil conservation specialists, and commercial people primarily interested in the agricultural field.

# Exhibitors

- Advance Furnace Company** Booths N-94 & N-95  
2300-18 East Douglas, Wichita 7, Kansas, FO 3-4232  
Exhibiting: Pixmap Projector Tables, Optivox Easels, Pixmap Book Trucks  
Personnel: Carl W. DeVore, Kenneth B. Northcutt, Maclean Briggs
- American Electronics, Inc.** Booth C-16  
655 W. Washington Blvd., Los Angeles 15, Calif., RI 9-5361  
Exhibiting: American Series AV 100 Audio-Visual Tape Recorders  
Personnel: Jim Hervey, Eugene Clears, John Tait
- American Optical Company** Booth S-131  
Box A, Buffalo 15, New York, FIlmore 4000  
Exhibiting: Educational Projectors, both Opaque and Slide  
Personnel: Edward V. Finnegan, John P. Baker, John P. Britton
- American School Publishing Corp.** Booth R-122  
470 Fourth Ave., New York 16, N. Y., MUrray Hill 5-9252  
Exhibiting: "School Executive," "School Equipment News" and "American School and University"  
Personnel: Frank J. Raymond, John A. Raymond, James F. Murphy, Prentice C. Ford
- Ampex Corp** Booth R-123  
934 Charter Street, Redwood City, California, EMerson 9-1481  
Exhibiting: Ampex Models A-122 Stereophonic Reproducer/Recorder along with A-692 Speaker/Amplifiers, Ampex Model 350-C, Ampex Model 601-P.  
Personnel: Robert G. Fuller, Charles Adams, C. Arthur Foy
- Arel Inc.** Booth O-98  
4916 Shaw Ave., St. Louis 10, Mo., PRospect 3-0600  
Exhibiting: Cameras, Editors, Tape Recorder & Photo accessories  
Personnel: A. Lipsitz, Jack Freeman, A. L. Korbel
- Audio-Master Corp.** Booth N-78  
17 East 45th Street, New York 17, N. Y., OXford 7-0725  
Exhibiting: 4-speed Record and Transcription Players - Transistorized Record Player - 6-Hour Tape Recorder - Battery Operated Tape Recorder - Recording Tape - 8-Hour Background Music Service - Combination Record Player and Slidefilm Projector  
Personnel: Herbert Rosen
- B & K Mfg. Co.** Booth E-28  
3726 N. Southport, Chicago 13, Ill., EAstgate 7-9480  
Exhibiting: TV Equipment: Flying Spot Scanner, Automatic Flying Spot Scanner, Closed Circuit Television Transmitters  
Personnel: R. M. Karet, John S. Margolin, Carl Korn, Wm. Grossman, Sheldon Schak, Jos. Rigor, Jack Alschuler, Harris Asher, Vic Bernin
- Bausch & Lomb Optical Co.** Booth B-12  
635 St. Paul St., Rochester 2, N. Y., LO 2-3000  
Exhibiting: Balopticon Projector, Micro-Projector, School Microscopes  
Personnel: A. E. Fischer, M. Seelinger, E. Lindbloom, James Mead, Ray Littlefield, T. Mitchell
- Bell & Howell** Booths L-59, L-60, L-61  
7100 McCormick, Chicago 45, Ill., AM 2-1600  
Exhibiting: Filmosound Specialist, Filmosound 302, JAN, Specialist Tape Recorders, Specialist Filmstrip Projectors, 16mm Cameras, Slide Projectors  
Personnel: Bob Kreiman, George Myles, Chuck Musson, Al Zacharias, Jim Graven, Connie Gray
- Charles Beseler Co.** Booths M-65 & M-66  
219 S. 18th St., E. Orange, N. J., OR 6-6500  
Exhibiting: Still Picture Projectors, Vu-Lyte, Vu-Graph, Prepared Transparencies, Do It Yourself Vu-Graph Materials  
Personnel: M. F. Myers, W. E. Schwanhausser, J. J. Kuscher, R. H. Yankie, M. Breyer, A. Eccles
- Bioscope Mfg. Co.** Booth U-158  
Box 1492, Tulsa, Oklahoma, LU 4-5360  
Exhibiting: Microprojectors  
Personnel: D. W. Hodges

**Advance Furnace Co.**, 2300 E. Douglas, Wichita 7, Kansas. **Beaths N-94 & 95. Projector tables and display easels.** The **Pixmobile** table has been revised and refinished in appearance and has greater strength, smoother workmanship. The **Optivax Easel** is designed for lecture presentations. The working surface is steel with a green surface for chalk. Equipped with painter, wax crayons, chalk, and eraser. Accessories include magnets for attachment of label cards or other material, lamp, black fluorescent light, fluorescent chalk and crayons, paper pads, and carrying case. The easel alone weighs 17 pounds. All products are moderately priced.

**Acro Service Corp.**, 210 E. Cortland St., Philadelphia 20, Pa. **Elastic Relief Map of Pennsylvania.** Lithographed in nine rich colors on sturdy Vinylite, showing Keystone State mountains and valleys in realistic third dimension, 59 by 39 inches. A sturdy fibre-board back enables the self-framed map to stand in the chalk ledge or hang from map hooks. A 3-D map of New York State will be completed early in September.

**Alpark Educational Records Inc.**, Suite 1F, 40 E. 88 St., New York 28, N. Y. New records by Helen Parkhurst—with focus on the teen-ager—include two an "Going Steady"—The Girl's Viewpoint and The Boy's Viewpoint, "Punishment," and "Guilt." Each record is in two parts. In the first part teen-agers discuss the problem. In the second part an adult panel reacts to the discussion. Each record \$8.

Miss Parkhurst with teenagers around discussion circle.

**American Optical Co.**, Instrument Division, Buffalo 15, N. Y. **Beath S31.** Delineascope models currently manufactured by the Instrument Division in Buffalo include the popular Standard and new High Speed series Opaque 1000 for the projection of opaque material and the Standard and High Speed GK Series for the projection of 2x2, 2 3/4 x 2 3/4, and 3 1/4 x 4-inch slides. Plans call for future additions to the Delineascope line.

**American Television & Radio Co.**, 300 E. 4th St., St. Paul 1, Minn., new, improved models of plug-in inverters have been developed for use of traveling supervisors and others who have occasion to dictate typed reports en route. Another new item is an electronic tube protector designed to protect TV and radio amplifier tubes from damage due to current surges. Two models, priced at \$4.95 and \$6.95, adequately protect all types of electronic units having input wattage from 100 to 300 watts. The ATR line also includes a new full-transformer 26-tube chassis for custom-built rack, wall or cabinet installation.

**Ampex Corp.**, 934 Charter St., Redwood City, Calif. A superb new Ampex designed for A-V needs and budgets at the low starting price of \$395 yet with the extraordinary high level of performance expected from Ampex. The A112 offers tape position indicator, simple two-speed selection (3.75 and 7.5 inches per second), and recording volume indicator. The Ampex A122 adds stereophonic sound at \$449.50.

**Ampro Audio-Visual Division of SVE Inc.**, 1345 Diversey Pkwy., Chicago 14, Ill. **Coths R-114, 115, 116.** The Ampro Classic two-speed tape recorder is designed and built for institutional use. Sturdy scuff-proof case and shock-absorbing rubber bumper guards for dependable service under hard usage. Piano-key controls, automatic shut-off, record safety tab, automatic selection indicator, two speeds. \$257.50.

**Animated Equipment Corp.**, 38 Hudson Street, New Rochelle, Y. Y. A 4-page folder is available describing equipment on which filmagraph as well as conventional animation can be produced, including 3-D work using as much as six planes.

**Art Council Aids**, Box 641, Beverly Hills, Calif. Recently released kodachrome slide sets include "Arts of Melanesia" (excluding New Guinea), 31 slides \$21; "Arts of New Guinea," 34 slides, \$23; "Arts of Polynesia," 25 slides, \$17; and "Asian Shadow Theatre Puppets," 28 slides, \$19. Mr. Ralph C. Altman edited these series and wrote the accompanying commentaries and bibliographies. The three Oceanic series illustrate and explain the significance of such primitive art forms as masks, figure sculpture, shields, utensils, drums, paintings, textiles, jewelry, and other artifacts, and include map slides of the areas involved.

**Association Films Inc.**, 347 Madison Ave., New York 17, N. Y. A new catalog of "Selected Motion Pictures" will be available in early fall—free. Special brochures describing new films of interest to specific school or church groups are also available free on request. These include "Program Planners" Guide to Free Informational Films for Community Organizations," "Educators' Free Films Supplement," "Free Films for Grade School Teachers," "Catalog of Walt Disney Movie Classics."

**Audio Devices Inc.**, 444 Madison Ave., New York 22, N. Y. Master Audiotape for magnetic recording reduces layer-to-layer print-through to a slight fraction of that which characterizes conventional tape of standard thickness. The reduction is measured at 8db. Particularly suitable for permanent recordings, it is claimed that it would take more than 100 years for Master Audiotape to reach the print-through level that standard tape reaches in one week. Master Audiotape, along with other Audiotapes, is now being made available on C-slot reels that provide for quick attachment of tape to reel simply by slipping the tape end into a curved groove in the hub.

**Audio Master Corp.**, 17 E. 45 St., New York 17, N. Y. **Booth N-78.** In addition to its usual line of 4-speed record and transcription players, a complete line of tape recorders will be shown, all of European origin and all being shown in this country for the first time. Among them is a tape recorder playing up to 12 hours; a hi-fi battery-operated machine with 7.5 inch tape speed; a dictating machine with a playing time of one hour, using standard reels; and the Selectophon with a 2-inch width tape held in a cartridge and providing up to 12 hours recording time. The **Tefifon**, an 8-hour player with pre-recorded music, is a new and completely novel design, along with a library of diversified sound books.

**Audio Master 4-Speed Record Player** sports the newest in compact, modern styling. Speaker is concealed when lid is attached.

**Bailey Films Inc.**, 6509 DeLongpre Ave., Hollywood 28, Cal. Now available for rental or purchase are two new series of important films. "Understanding Modern Art" is a series of three half-reel color films produced by Wayne Thiebaud. These three films, entitled "Cubism," "Impressionism," and "Non-Objective Art," present clear explanations of the unique qualities of modern art styles. "Child Arts and Nature" is the second series. Produced by Frank Bach and James Schineller of the University of Wisconsin, they indicate the significance of nature as a source of inspiration for child art. These three half-reel color films, entitled "Birds and Etching," "Insects and Painting," and "Weeds and Mosaics," contain many examples of children's interpretations.

**Bausch and Lomb Optical Co.**, 635 St. Paul St., Rochester 2, N. Y. **Booth B-12.** Exhibiting Balopticon Projectors showing slides, filmstrips and opaque pictures and objects. Also micro-projectors and school microscopes.

**Bell & Howell Co.**, 7117 McCormick Rd., Chicago 45, Ill. New portable tape recorder, Model 775, features dual recording-indicator lamps and centrally located pushbutton controls. A public-address switch setting converts the unit to a self-contained P.A. system, and permits the unit

Model 775 Tape Recorder doubles as P.A. system.

to be used as an auxiliary amplifier and speaker system for record players or small radios. Price \$189.50. The Filmosound 302 magnetic-recording projector has been equipped with a powerful 15-watt amplifier which meets all SMPTE standards and provides a 50 per cent increase in distortion-free output. Single case model \$734, other models available with 12" auxiliary and 25-watt power speakers. The rock-mounted Model 787A tape recorder affords up to two full hours on each side of the thin-base dual tape. Designed to fit standard size mounting racks.

**Berndt-Bach Inc.**, 961 N. Mansfield Ave., Hollywood 38, Cal. The **Auricon** 16mm sound-on-film camera is being used as a speech-training "mirror" by many organizations. Public speaking students are secretly photographed during their initial presentations and later when some poise has been achieved. Students progress faster when they can see in live action their improvement to date. Auricon equipment is sold with a 30-day money-back guarantee.

**Beseler Co.**, Charles, 219 So. 18th St., East Orange, N. J. **Booth M-65, 66.** Exhibiting the Vy-Lyte and Vu-Graph still picture projectors, prepared transparencies and "Do-It-Yourself Vugraph Materials." The company is sponsoring a "Beseler Dream Darkroom" in a trailer touring eastern states for two and three day stands in principal cities.

**Brandon Films Inc.**, 200 W. 57 St., New York 19, N.Y. Featuring unusually outstanding American and foreign language features and short subjects, the company is making available on exclusive long-term lease the Louis de Rochemont production "Lost Boundaries" featuring Mel Ferrer. Running time 97 minutes. Lease \$195. Teachers guide available.

**Broadcasting and Film Commission**, National Council of Churches, 220 Fifth Ave., New York 1, N.Y. **Booths T-145, 146.** Three new 16mm sound films, each 28½ minutes, color and black-and-white: "Broken Mask" — which will be featured in the Sunday morning worship service, "Younger Brother," the story of a Japanese convert to Christianity, and "Split-Level Family" dealing with the piece of Christian stewardship in a present-day standard of living.

**Carrier Manufacturing Co.**, 1235 Southeast Division, Portland 2, Oregon. Carrier atop station wagon accommodates two men and tripods, 22 sq. ft. of deck space, complete with access ladder. Sixteen rubber cushions carry evenly distributed weight. Intended for commercial, press or television photographers.

**Califone Corp.**, 1041 N. Sycamore Ave., Hollywood 38. **Booth B-14.** Featuring the Califone Commander and Director Playbacks. The 40V-7 has a high-fidelity amplifier with an output of 25 watts undistorted, 30-20,000 cycle response, two heavy duty speakers, center-drive turntable with speed range of 16 to 84 rpm, Strobeselector control for exact setting of four basic speeds, mike input. \$214.50. The Model 12V-7 has a 6-watt amplifier (undistorted), frequency response of 50-15,000 cycles, 12-inch speaker, mike input, and other features similar to the 40V-7. \$127.50.

**Camera Equipment Co. Inc.**, 315 W. 43 St., New York 36. New two-speed Stop-Motion CECO motor for Arriflex 16mm camera provides either ½ or ¼ second exposure, built-in 1:1 Veevor frame counter, forward and reverse, first American motor of this type. Also synchronous 24-speed motor for Cine Kodak K100 camera. New Soft Voltobloc Nickel-Cadmium battery, hermetically sealed, suitable for all types of motor-driven cameras. Authorized repair service on Maurer equipment.

**The Camera Mart Inc.**, 1845 Broadway, New York 23. Special offerings of new and used equipment, including disc recorders, tape recorders, 16mm sound projectors, 16mm arc projectors, spotlights, and other lighting equipment.

**Catalog of Free Teaching Aids**, Box 943, Riverside, Calif. Over 4,000 free teaching aids which may be retained by the teacher. Items are arranged under subject headings and extensive cross-referencing is used throughout. Annotation indicates the minimum grade reading level. \$1.50.

**Cathedral Films Inc.**, 140 N. Hollywood Way, Burbank, Calif. **Booth F-32.** Religious films. "Life of Christ" series, 16mm, 12 episodes in black-and-white and color. "Story of Jesus," 24 frame, color, soundslide films with dual purpose records — one side for children's services and one side for adult presentations. Also showing the other Cathedral Bible Story films and soundstrips.

**Churchill-Wexler Film Productions**, 801 N. Seward St., Los Angeles 38, Calif. Films for elementary science. "Ways

to Find Out" 10-minutes, black-and-white or color, correlates with the Health Elementary Science Textbook Series by H. & N. Schneider. In it a young child experiences the wet world about him. He can see the clouds, smell the damp leaves, hear the raindrops, feel the wetness and even taste the rain. In his home he explores the world that is revealed through size and shape, rough, smooth, loud and soft. \$50 and \$100.

**Jack C. Coffey Co.,** 710 Seventeenth St., North Chicago, Ill. **Booth F36.** Filmstrip library plan filing systems for filmstrips, disc records, 2x2 slides, sound slidefilms and records, stereo slides, mobile projector stands for the classroom and school building, mobile projector cabinet-stands, plastic filmstrip cans, filmstrip fibre mailing cases, fixed-focus glass-aluminum slide binders, filmstrip wall and table files for open display of filmstrips, Wheelit projector tables for moving equipment up or down stairs, album record racks.

Mobile Wheelit projector table is storage for records and film

**Coronet Films, Chicago 1, Ill. Booth G39.** During the next twelve month period, Coronet Films will release more than 65 teaching films for classroom use. These new releases will bring to 720 the number of films initiated, written, filmed, and edited by the Coronet Films production staff for the school curriculum. The new releases continue to exemplify Coronet's pioneering efforts in the field of color, for all but a few films are currently available in either color or black-and-white. A full color booklet in this issue of **Educational Screen and Audio-Visual Guide** tells the complete Coronet color story with concrete examples of the superiority of educational films in color. Almost two decades of producing films in color has served to anticipate the tremendous trend to color now being experienced in thousands of classrooms throughout the country.

As further evidence of leadership, Coronet has released the first film in its series of projected "educational spectaculars" — "The French Revolution." This and the subsequent films in the series are characterized by their large scale production, dramatic elements, and exciting appeal. They will add a new dimension to the teaching film and set a high standard for educational film production everywhere.

Scene from Coronet film "The French Revolution"

**Geo. W. Colburn Laboratory Inc.,** 164 N. Wacker Drive., Chicago 6, Ill. **Booth E-30.** Complete services to producers of 16mm motion pictures, 35mm slide films and slides — including research and script, photography on location or in studio, processing, edge-numbered work prints, sound recording and re-recording, editing and matching, titling and animation, release printing, magna-striping, slide film animation, slide duplicating, Vacuumating.

**Compo Corp.,** 2277 W. St. Paul Ave., Chicago 47. **Booth R-119.** Exclusive Compo reel with patented "Compo Clip" permits threading instantly and surely even in the dark. Holds film firmly yet releases easily when unreeling. Available on all 8mm and 16mm sizes up to 600 feet.

**Concord Record Corp.,** 519 S. Fifth Ave., Mount Vernon, N. Y. "Do-It-Yourself H.M.S. Pinafore." Along with a 12" LP recording of orchestral accompaniment to the best-known airs from the work, a booklet containing words and music is supplied for individuals or classes to sing along. Complete \$3.98 — additional booklets \$1 each. "Pinafore" is soon to be followed by a do-it-yourself version of the "Mikado."

Concord Record 3007, "American Anthology," is devoted to the life and times of America — in all forms and from all sources. It features American orchestral music from Fry to MacDowell. \$3.98.

**Contemporary Films Inc.,** 13 E. 37 St., New York 16. Herman Melville's "Moby Dick," beautifully read by Thomas Mitchell, and illustrated with drawings, integrated with special music to recreate the novel in a new motion picture art form. In color, 30 minutes \$250. Rental \$25.

**Co-Operative League of the U.S.A.,** 343 S. Dearborn St., Chicago 4, Ill., specialize in films dealing with the co-operative movement and philosophy, in this country and abroad, sold to university extension division and other rental libraries, or rented through regional and state co-op center libraries. Free catalog.

**Cousino, Inc.,** 2107 Ashland Ave., Toledo, Ohio have expanded their line of continuous, self-rewinding recording tape cartridges with a unit offering a whole hour's playing time. A new cartridge player, with de-luxe built-in pre-amplifier, is fitted with a tri-purpose magnetic head to play either manual or stereo tapes through any standard amplifier-speaker. The cartridge, originally designed as a straight message repeater, is being put to work in all kinds of electronic trigger situations. Early application to automatic filmstrip and 2x2 slide projectors is certain. Various accessories, including splicing tape and splicers, are offered in the Cousino line.

Cousino recorder with self-rewinding tape cartridge

# Product Review

**George F. Cram Co. Inc.**, 730 E. Washington St., Indianapolis 7. The newest development in world map projection, measuring 64-inches wide, the armadillo projection shows all of the continental areas unbroken, with a minimum of distortion. Makes it easier for the student to visualize how the map is taken from the globe. Latitude and longitude are clearly shown and directions indicated. Large, bold-face type and heavy boundary lines make the map easily read at classroom distances. Also available in 64-inch projection is a United States map and companion globes in 12-inch and 16-inch sizes with colors and physical and political features made to correlate exactly.

**Curriculum Materials Corp.**, 17 E. 48th St., New York. **Booth S-137.** Four new integrated sets of full-color filmstrips are being added this summer to the famous Curriculum Library which already numbers approximately 600 lesson filmstrips. The new titles include Stories for Beginners, Canada, Mexico, and Africa. A new Comprehensive Reading Lesson series, recently completed, is high on the list of new materials purchased from instructional funds by leading school systems. The entire Curriculum Library, comprising 160 units in 44 subject areas, is now owned and distributed by a new company headed by Herschel Smith, Memphis, Tenn. Other officer-owners are Herbert Elkins, Tujunga, Cal.; E. E. "Jack" Carter, Raleigh, N. Car.; and Carl J. Kunz, Philadelphia, Penn.

**Cushman & Denison Mfg. Co.**, 625 Eighth Ave., New York 18, N. Y. "Teachers Pet" Flo-Master Felt Tip Pen. Teachers who use this all-purpose felt-tipped pen for visual aid and drawing projects often wonder how they ever got along without it. It's a universal writing tool for paper, wood, glass, metal, cloth, rubber, and even plastics. From \$3.

**Dage Television Division**, Thompson Products Inc., Michigan City, Indiana. Dage TV Camera Model 60 can be operated by anyone — has unlimited educational possibilities in high schools, colleges, and universities all over the U.S.A. Dage closed-circuit TV has demonstrated its ability to solve a staggering array of educational problems.

**Da-Lite Screen Company, Inc.**, 2711-23 N. Pulaski Road, Chicago 39, Ill. **Booths P-106, 107, 108.** "Silver King" screen is completely new, from fabric to housing. It is meeting special favor in schools and institutions where rooms cannot be completely darkened. The new metallic-surfaced fabric has greatly improved flame and fungus resistance, and provides exceptionally sharp and true color rendition. New octagonal case, in silver grey hammerloid finish with maroon-colored fittings, has a new tensioning device which, simply by pressing the handle downward, stretches the fabric to a flat, wrinkle-free surface. The automatic pushbutton set-up of the Challenger model has been retained in the Silver King.

**Pat Dowling Pictures**, 1056 S. Robertson Blvd., Los Angeles 35, Calif. These Elementary Science films have earned wide popularity all over the United States. New titles include "Microscopic Wonders in Water," "Animal Life at Low Tide," "Aquarium Wonderland."

"Silver King" metallic surfaced screen is completely new from fabric to housing

**Dryden Press**, 31 W. 54 St., New York 19. "The Audio-Visual Equipment Manual" by Dr. James D. Finn is a comprehensive how-to manual of operating and maintenance instructions for all major types and models of audio-visual equipment. Available August 1st, the manual, printed in two colors and tab-indexed for quick reference to specific models, contains 386 pages of step-by-step instructions for the use and maintenance of projectors, record players, tape recorders, and other audio-visual devices now in general use. Its oversize pages (8¼ x 11 inches) contain nearly 1,400 illustrative photographs, line drawings, and cartoons. Its list price will be \$9.50.

**DuKane Corp.**, St. Charles, Ill. **Booth L-62.** Presenting student participation films — soundslide films with record providing instructions for student activities during an entire class period. Six titles now available include "The Dutch Battle with the Sea," "The Netherlands: Land & Waterways," "Belgium: Land and People," "Belgium: Town and Industries—Lower Rhine & Upper Rhine."

DuKane's new Flip-Top sound slidefilm projector provides person-to person AV selling

**E. I. duPont de Nemours & Co. Inc.**, Fabrics Division, Wilmington 98, Del. **Booths F-141, 142.** From complete blackout for opaque projector use to controlled sunlight for regular class activities, Tontine opaque drapes provide permanently flame-resistant darkening. Tontine washable drapery material is lightweight and pliable. Tontine washable window shade cloth comes in 45 beautiful colors including seven translucent "sky colors."

**Eastman Kodak Co.**, Rochester 4, N. Y. **Booths R-117, 118; S-132, 133.** To keep attention from wandering, school movie showings require the smoothest possible presentation. That's why it's so important that even an inexperienced person be able to set up a projector easily, that the sound be true and resonant, that the picture be sharp and sparkling even in a room light enough for note-taking. With a Kodoscope Pageant 16mm Sound Projector these things are possible. The Pageant's easy-to-follow film path is right on the projector. Exclusive Kodak Super-40 Shutter puts 40% more light on the screen.

(See photo on next page)

**Ednalite Optical Co. Inc.**, 200 N. Water St., Peekskill, N. Y. The Ednalite Electric Projection Pointer is perfect for the lecturer who requires a sharply defined contrasting arrow-image to indicate clearly the specific point of discussion at great projection distances and with constant high-output live voltage power. Made of precision, lightweight metals, this instrument is perfectly hand-balanced with feather-touch momentary switch. It operates on ordinary house current. Complete with 15-feet of detachable line cord \$49.50.

**Educational & Recreational Guides Inc.**, 10 Brainerd Rd., Summit, N. J. Course of Study in Photoplay Appreciation — "Standards of Photoplay Appreciation" — is the title of a new text by William Lewin and Alexander Frazier. Chapters include such topics as Why Study Photoplay Appreciation, Where Did the Movies Come From, Who Makes the Movies. \$4.95.

**Kodak 300  
Projector  
introduces  
"On-The-Top"

**Educational Developmental Laboratories**, 75 Prospect, Huntington, New York. **Booths N-92, 93.** Complete line of reading improvement instruments includes the EDL Controlled Reader, the new "Tach X" (replacing the "Timex"), the Typing Reader, and the Prism Reader (a Controlled Reader modified with Risley Prisms for near-point training).

**Educational Electronics Inc.**, 6322 N. Clark St., Chicago, Ill. Hobby kits for students and amateurs interested in experimenting with seven electronic circuits. Parts are coded by number or by color in order to make assembly of outfits extremely simple. Complicated sub-assemblies are pre-soldered. Radio clips eliminate the need for soldering on most kits. Kits graded in difficulty from junior high level to basic college demonstration units.

**Educational Screen & Audio-Visual Guide**, 2000 Lincoln Park West, Chicago 14, Ill. **Booth N-77.** Combination of the two oldest magazines in the audio-visual field. Free copies of this special Convention Issue. You are cordially invited to visit our exhibit and discuss our current innovations — and look over some of the back issues that mark important milestones in 35 years of audio-visual history.

**Educators Progress Service**, Randolph, Wisconsin. The 1957 Educators Guide to Free Tapes, Scripts, and Transcriptions, or third annual edition, lists, classifies, and provides complete information on sources, availability, and contents of 57 free tapes, 177 free scripts, and 96 free transcriptions. Included in the guide is an instructive article on useful audio experiences by Dr. Walter H. Wittich.

"The Educators Guide to Free Films" lists 3880 free films, 842 of which are new in this 1957 or 17th annual edition. The increase in the number of free films available is nearly 600% in the past 17 years. The guide includes an article by Dr. John Guy Falkes entitled "The Gifted Student and Free Films."

**Electro-Chemical Products Corp.**, 60-E Franklin St., East Orange, N. J. Non-toxic Ecco 1500 Anti-Static Film Cleaner cleans better, dries faster than carbon tet; cleans, conditions, and lubricates film in one operation; non-poisonous, non-flammable, stops dirt-attracting static, fast-drying, keeps film pliable.

**Electro-Voice**, Buchanan, Mich., adds a new crystal cardioid microphone to its line that is reported to give greatly improved results especially in over-reverberant rooms. Price \$49.50. Offer excellent new free booklet "The ABC's of Microphones".

**Encyclopaedia Britannica Films**, Wilmette, Illinois. New complete year's course in introductory physics, in color or black-and-white, developed by one of America's most distinguished teachers of physics, Dr. Harvey E. White, Vice-Chairman of the Department of Physics, University of California. The course has been developed by Dr. White and is planned to fit the daily class schedule, qualifying students for full academic credit. Each lesson runs about a half hour. The series includes 162 lecture and laboratory sessions in 16mm sound motion pictures. Films include: introduction, 4 periods; mechanics, 44 periods; properties of matter, 15; heat, 15; sound, 11;

special lessons on slide rule, algebra, trigonometry, 3 periods; light (optics), 18; electricity and magnetism, 24; atomic physics, 9; electronics, 8; quantum optics, 4; nuclear physics, 7.

**Enrichment Teaching Material**, 246 Fifth Ave., New York 1, N. Y. Enrichment Records dramatize 24 favorite Landmark Books with authentic voices, music, and sound effects. Latest releases include Ben Franklin of Old Philadelphia, Lincoln and Douglas; and The Panama Canal and Robert Fulton and the Steamboat. These are non-breakable 33 1/3 rpm records of 15-minute duration. Records cost \$3.95 each, containing two dramatizations each. Enrichment Filmstrips are correlated but not synchronized with Enrichment Records. Each filmstrip portrays the historical background of the event being depicted. Each filmstrip is about 45 frames each, in color and costs \$6.50 or \$35 in sets of six.

**Excelsior Fibre Case Co. Inc.**, 136 W. 14 St., New York 11, N. Y. Presenting film shipping cases, tape mailers, record mailers, and salan print mailers built to last and priced right.

**Eye Gate House Inc.**, 146-01 Archer Ave., Jamaica 35, N. Y. **Booth F-35.** Over 250 new educational and religious filmstrips are in production for release during the next 12 months. Eye Gate has purchased new quarters with five times greater space in order to house expanded production and increased service area. Among the new productions are 90 filmstrips on arithmetic produced in collaboration with D. C. Heath to correlate with "Learning to Use Arithmetic"; 45 filmstrips for the Catholic Church; 32 sound filmstrips for Protestant Churches; and 90 filmstrips for distribution to members of the Eye Gate Filmstrip Club Plan.

**Family Films**, 5823 Santa Monica Blvd., Hollywood 38, Calif. **Booths P-104, 105.** Motion pictures for church and educational use. New additions to Living Parables series that present Biblical parables in relationship to present-day living. A whole new series, in color and black-and-white, on the Book of Acts, with approach in terms of areas of Christian principle and basic teachings of the Early Church, rather than the purely biographical. These films are produced in the company's own studio where three leading TV series — Lutheran, Methodist, and Southern Baptist — and other productions for other denominations are also being made.

**Fiberbilt Sample Case Co. Inc.**, 40 W 17 St., New York 11, N. Y. Fiberbilt Shipping Cases are now being supplied with new, improved parcel post shipping cards that assure prompt arrival at destination. Each case is supplied with two cards at no additional charge. Approved by the United States Post Office, the card provides a separate line for the zone number and is designed to permit easier addressing and more prominence to the name of the consignee, thus reducing the possibility of error in handling. The card is held securely in the steel cardholder with locking device and, when properly addressed, assures safe and accurate delivery to its marked destination.

**Filmock**, 1327 S. Wabash Ave., Chicago 5, Ill. "Stop-motion" filmographic production puts still material on sound motion picture film. The novel technique produces simulated motion effects amounting to a limited form of animation

at a cost only slightly higher than that of a conventional filmstrip. Assures absolute synchronism of sound and picture and permits the inclusion of live action films and lip-synch dialog. Filmack's well known 35mm and 16mm title services have been expanded into a fully equipped production studio set up to impart professional finish to school-made, church-made and industry-made films, as well as to turn out original film productions of all kinds.

**Film Associates of California**, 10521 Santa Monica Blvd., Los Angeles 25. Educational film productions on a variety of important educational topics. A late 16mm release in color or black-and-white is the 1/4 reel primary film "People Who Work at Night."

**Florman & Esbb**, 68 W. 45 St., New York 36. F & B Split Reels provide a simple means of projecting, editing, synchronizing, cleaning, and inspecting film on cores without rewinding by simply slipping them into the special reels. 400-foot 16mm size \$4.50. Other sizes available. Also featuring recording tape and special new film cement for all films.

**F & B Film Repair & Splicing Block** enables you to save your torn, badly damaged, gouged slidefilms and movie films.

**Focus Films Co.**, 1385 Westwood Blvd., Los Angeles 24. Interesting and enlightening films for the use of students of the French language. A recent release is "Visages de la Ville Lumiere," film number four of the Accent Aigu Conversational Film Series.

**Forse Manufacturing Co.**, 2349 Sullivan Ave., St. Louis 7. Forse darkening shades and draperies are made of finest fabrics, custom-made in any size, complete, ready for installation, guaranteed for ten years, decorative colors.

**Garrard Sales Corp.**, 80 Shore Road, Port Washington, N. Y. S. G. Brown headphones, Type K, provide what are actually two miniature hi-fi loudspeakers, designed to reproduce the full orchestral range of 50 to 10,000 cycles. They are complete with rubber ear cushions and a flexible six-foot, one-piece connecting cord. The units have moving coil type motor assemblies, Bachelized conical diaphragm, flux density of 6,000 lines, impedances of 62, 600, and 18,000 ohms. Available with monoaural/binaural wiring, headbands and receiver cases of highly polished dural. \$28.95 to \$36.50.

The Model T Mk II 4-speed manual record player features unusual operating simplicity and durability, combined with compact size, and was developed specifically for hi-fi systems. Features 4-pole shaded induction surge motor and belt-free true-turret drive at \$32.50 less cartridge. Furnished with UL-approved wiring; both electric cord and pickup cable are ready for plug-in. Starts automatically and shuts off automatically at the end of the record.

**Genarco, Inc.**, 9704 Sutphin Blvd., Jamaica 35, N. Y. **Booth B-10.** Premiere showing of the new Genarco 3000 watt slide projector Model SM-2. Electric slide changer accommodates 70 standard 3 1/4"x4" slides, push button remote controlled. Cooling on this most powerful of all slide projectors is so efficient that a slide can be kept in place for hours without heating. Wide angle lens for rear projection and long focal length lenses available. Slide changes in less than a half-second.

**General Precision Laboratory Inc.**, 63 Bedford Road, Pleasantville, N. Y. Portable TV Projection System and Remote-Controlled Camera Turret. The Model PB-611A incorporates a newly designed optical system which provides clear, sharp picture detail and increases light output. TV pictures from six to sixteen feet wide, or larger. Simplified operation for educational use. The 3-lens turret for industrial TV cameras changes lenses by remote control in one-half second. The turret accommodates standard 16mm "C" lens mount lenses of practically any focal length and combination.

(See photo in next column)

**General Precision television projection system** incorporates newly designed optical system which greatly increases light output over earlier designs.

**Gruber Products Company**, 223 Albion St., Toledo 6, Ohio.

Two new folding projection stands and one nonfolding model have been added to the Wheelit line during the past year. Large 12-inch ball-bearing wheels with semi-pneumatic tires and 4-inch swivel casters make it possible to transport as much as 300 lbs. with ease. The folding models fold to a compactness of 14-inches . . . even the two-shelf model. The shelves are of thick sound-absorbing plywood covered with scuff-resistant Formica. A non-folding model of chrome tubing has two 19 1/2"x21-inch Formica-covered plywood platforms. The top platform is 41 inches high and the lower one 14-inches high. Folding, balance, stair operation, and ease of maneuverability are claimed by the manufacturer to be outstanding features of all Wheelit models.

**Non-Folding Wheelit** adds safety to the transport of AV equipment

**Hawald Co.**, 1210 Chicago Ave., Evanston, Illinois. The new **Movie-mite "Supreme"** 16mm sound motion picture projector weighs only 27 1/2 lbs., a complete answer to every classroom need. "**Splice-O-Film**" offers the school film center the sure safety of the professional hot splice at reasonable cost. **Inspect-O-Film** Model R provides automatic, electrically controlled film inspection. **Admatic** projector gives continuous slide shows. The **Moviescope** with precision German mechanism views 16mm films in motion. **Hawald** storage cabinets offer beauty, safety, convenience.

**Holzkamp Nature Pictures**, 538 Glen Arden Drive, Pittsburgh 8, Pa. Pioneer producers of outstandingly beautiful nature films, especially birds. Eastern representative: **Albertson Distributing Co.**, 1105 Park Ave., New York 28.

**Hi Worth Pictures**, Box 6, Altadena, Calif. Thirty-five photographic study prints of Canada, giving a coast-to-coast overview. Fishing, farming, forests, wildlife, a provincial capital, the Dominion capital, cities, and transportation. 8x10 mounted, \$38.50, unmounted, \$24.50; 11x14 mounted, \$66.50, unmounted, \$49; 15x20, mounted, \$117.25, unmounted, \$91.

**Household Finance Corp.**, Prudential Plaza, Chicago 1, Ill. "Your Money's Worth in Shopping," a new color filmstrip lecture just released by the HFC Money Management Institute illustrates ways to make personal and family goals come true through mastery of good shopping techniques. Available on free loan.

**Hunter Douglas Aluminum Division**, Bridgeport Brass Co., 405 Lexington Ave., New York 17, N. Y. **Booth B-16.** Flexaluminum audio-visual blinds turn a sunny classroom into a darkened auditorium instantly. Both old and new classroom may be equipped for modern audio-visual training at a cast well within school budgets. The new Flexaluminum audio-visual blind permits the most precise adjustments for any desired light condition—from bright daylight to darkness for opaque projection. Original cost is competitive with less versatile window treatments. Special design of overlapping slats for maximum darkness when needed.

**International Film Bureau Inc.**, 57 E. Jackson Blvd., Chicago 4, Ill. **Booth E-27.** Home of outstanding educational films. Particularly noteworthy series on psychology and guidance includes late release "Anger at Work," 21 minutes, \$125. Explains anger as one of the mental mechanisms of man's personality, his displacement of anger onto other men and how this impairs his efficiency in everyday living.

**Jom Handy Organization**, 2821 E. Grand Blvd., Detroit 11, Mich. **Booth R-111.** More than 700 class-tested filmstrips in 15 curriculum areas. The 1957-58 filmstrip catalog will be introduced, and new productions scheduled for release during the 1957-58 school year will be available for demonstration.

**Johns-Manville, Von Cleef Bros., Inc., Division**, 7800 Woodlawn Ave., Chicago 19, announce their Dutch Brand vinyl plastic tape in seven colors and three widths. The colors—red, yellow, green, blue, gold, silver, white and black—sell for 20 cents per half-inch roll, 25c per 3/4" roll, and 50c per 1 1/2" roll. These colors are especially useful in making color-keyed line charts. Black electronic tape remains a basic item in the line.

**Kalort Co. Inc.**, Plainville, Conn. **Booths H-43, 44, 45.** The Craig Projector-Editor with its brilliant 3 1/4x4 1/4-inch screen, Master Splicer, 400-foot capacity rewinds, frame marker, and focusing and framing adjustments is just right for editing as the pro's do it whether the film is 8mm or 16mm, color or black-and-white, sound or silent. Hooded screen permits comfortable viewing in a lighted room. Straight through threading. \$79.50.

**Keystone View Co.**, Meadville, Pa. Keystone Tachistoscopic Training enables thousands of schools to teach more with less effort. Gains of remedial reading classes using the Keystone equipment and materials have been as high as 75%. Training also helpful for typewriting, shorthand, bookkeeping, clerical training, music, and arithmetic.

**Kimberly-Clark Corp.**, Public Relations Dept., Neenah, Wisconsin. "The Woodlands Story" is a 25-minute film available on free loan. Produced and narrated by John Ott, well known nature photographer, it includes time-lapse sequences of pine seedling growth. Scenes of the selection and cutting of trees are included as well as pulp wood handling, transporting the wood to the paper mills, and reforestation and forest management activities.

**LoBelle Sales Corp.**, 510 S. Worthington, Oconomowoc, Wisc. **Booths P-102, 103.** New, integrated one-unit slide projector and tape recorder combination, the "Maestro II" consists of vertically mounted, 2-speed, twin-track recorder mechanism and control panel coupled with a rapid-automatic, high-capacity, 500-watt, 2x2 slide projector. One track carries the sound, the other the nonaudible tripping signals. The magazine will carry up to 150 slides on a single load. Automatic projection gives a full hour slide program without interruption. Slide change can be set so rapidly that there is actually a simulation of motion. The recorder section can be used as any standard tape recorder, while the projector can also be operated separately.

(See photo in next column)

"Maestro II" the one-unit slide-projector and tape-recorder combination for the ultimate in AV entertainment

**Levelor Lorentzen Inc.**, Audio-Visual Dept., 720 Monroe St., Hoboken, N. J. Educational effect and utility of the lesson are heightened by proper control of the illumination level in the classroom. The Levelor A-V Venetian Blind adjusts for every degree of darkness desired—in a matter of seconds—by means of adjustable slats.

**Lightmaster Screen Co.**, 12270 Montague St., Pacoima, Calif. A special, sinusoidal rib surface accounts for the "Lightmaster" screen's greater brilliance and vertical as well as side-angle reflectance. Dealers and users attest the efficiency of the screen in undarkened rooms, when correctly placed to take full advantage of its exceptional side-angle brilliance. Special positioning hooks are built in to permit tilting and hanging against wall, over map or chalkboard mounting. Weighs only 10 pounds.

**Manhattan Color Laboratory**, 254 W. 54 St., New York 36. Color filmstrip service for educational producers. Handling every size order and providing all kinds of services related to color processing.

**Meyercord Co.**, 5323 W. Lake St., Chicago 44, Ill. Decals for film container and reel identification. The latest job assigned to versatile decals is that of uniformly identifying motion picture film containers. First suggested to the Los Angeles County School System only a few months ago, initial tests were so successful that special decals were ordered in quantity. Other school systems have been quick to take up this new film-can identification, although the idea is not limited to schools. The decals may be serially numbered in manufacture if desired. They are available for identification of the lending library as well as providing open areas for stenciling, stamping, or typing the title and numerical information.

(See photo on next page)

**Miles Reproducer Co. Inc.**, 812 Broadway, New York 3, N. Y. Self-Powered Briefcase Conference Recorder. On-the-spot recordings may be made in or out of closed briefcase. Unit is self-powered: has no wires, warmup period, or exposed microphone. Operates from self-contained standard dry batteries, recording continuous up to four hours on each side of a nonflammable safety-film belt costing 3c per hour. Recordings are permanent, nonmagnetic, nonerasable. Easy to file or mail.

**Miller Manufacturing Co.**, 3310 E. Roxboro Rd., N.E., Atlanta 5, Ga. **Booth C-15.** The Miller Self-Adjusting Projection Table adjusts to the unevenness of any floor. Easy, efficient method of transporting projection and recording equipment and of showing materials at the projection or recording site. Built-in electrical outlets and extension cord. Locking casters. \$44.95 to \$59.95. A new "Miller Special" table is to be introduced at this NAVA show.

**Mohawk Business Machines Corp.**, 944 Holsey St., Brooklyn 33, N. Y. The 1957 Model Midgetape 44 is a battery-operated, pocket-sized tape recorder weighing under three pounds. It has a ball-bearing motor, new clutch assembly, anti-tape bunching feature, shield and other internal

# Product Review

improvements. Uses any kind of microphone and plays back through earphones or other available playback medium. Tape cartridges play 1-1½ hours. Uses two self-contained batteries. With batteries, lapel microphone, single earphone, and 1-hour tape cartridge \$249.50.

Smart, practical decals for film container and reel identification, provide uniformity in labeling

**Neumode Products Corp.**, 250 W. 57 St., New York 19, N. Y. **Booth T-147.** Neumade **Shepard Electronic Splicer** handles Cronor, triacetate and magnetic films; Cinemascope and standard perforations; 35mm, 16mm, and 8mm film sizes. Provides permanent welds using no cement. Extra narrow overlap of .03 inches. Fast. Easy to operate. Finished with an attractive lifetime baked enamel housing. Overall size 15x15x11-inches. Weighs 25 pounds. Also available for B&H pedestal splicer. **Renovex** nontoxic film cleaner and conditioner completes the new array of film handling equipment in display, including film racks, cabinets, power rewinds and cleaners.

**Nuclear Products Company**, 10173 East Rush St., El Monte, California, Dept. 72. The new 3" **STATICMASTER** embodies the latest scientific knowledge in the efficient peace time use of radioactive isotopes which insures instant removal of static electricity and static-attracted dust and lint. Created by the well known industrial designer Henry Chapman Keck, as a pleasing companion to the 1" **STATICMASTER**. New model priced at \$9.95. Royal blue. Sold by photographic dealers everywhere. Write manufacturer for descriptive folder.

**Park Films**, 228 N. Almont Drive, Beverly Hills, Calif. Two notable Burton Holmes travel films: "Austria," a study in courage and faith, 22-minutes, color \$190, black-and-white \$95, secondary level; "Coostal Brazil," 11 minutes, color \$100, black-and-white \$50, elementary level.

**Peerless Film Processing Corp.**, 165 W. 46 St., New York 36. Scratches on film are havens for dirt, and refract light. On the screen, they mar the picture, irritate audiences and distract attention from the message or story. On the sound track they produce offensive crackling. Fortunately, through Peerless processing, scratches can almost always be removed—without loss of light, density, color quality, sound quality, or sharpness.

**Pentron Corp.**, 777 S. Tripp Ave., Chicago 24, Ill. **Booth S-128.** The new "Tape Teacher" is part of a new line of integrated tape components for custom installation now being offered for those school and church institutions that give serious attention to their audio facilities. The line includes a choice of three tape transport

mechanisms, three preamplifiers and a 4-channel microphone mixer. Ten possible combinations include monoaural and stereophonic, and in-line (stacked) or staggered heads. At the other end of Pentron's extensive line is the Century Model NL-1 which, despite \$139.45 (for the stereophonic model) price, affords two-speed, 40 to 11,000 cps, 6" round PM extended range speaker, automatic braking, neon level indicator, and two input and two outputs. New "Pentape" recorded tapes and stereo conversion kits.

New Pentron High-Fidelity Tape Recorder

**Polocast, Incorporated**, 9750 Conklin Road, Blue Ash, Ohio. **Booth T-144.** New "Lenscreen" materials for projection in normally lighted, or even brightly illuminated rooms. Advertisers use it to project into daylight windows, schools will find it applicable to all situations where lights cannot be effectively dimmed. \$64.50 f.o.b. Cincinnati.

**Polaroid Corp.**, Cambridge 39, Mass. **Booth R-112, 113.** Quick, easy way to make slides. Complete system includes the standard Polaroid Land Camera, special black-and-white films, mounts, hardener, and projector—plus a versatile Copymaker that lets you make slides from any text material, existing photographs, charts, graphs, titles, or what have you. Choice of two sizes of film—2¼x2¼ or 3¼x4. Brilliant, grainless film quality for 12-foot wide pictures with no loss in detail. Fast ASA speed of 1000. Slides cost about one-third of other methods.

Snap a picture and project it on the screen in a couple of minutes, with the new Polaroid Land Transparency System. Uses new 1000-speed Polaroid Land Projection film, fastest in the world. User can have finished, mounted slides at a fraction of the cost of black and white slides.

**Portofilms**, Orchard Lake, Michigan. "Helping Johnny Remember," a 16mm sound-color film to show children how they can learn to be considerate of others; for lower elementary and primary children.

**Projection Optics Company, Inc.**, 330 Lyell Avenue, Rochester, New York. **Booth N88-89.** New and improved TRANSPAQUE MARK II Opaque and Overhead Projectors. 16mm Anamorphic Lenses. Speed  $f/3$  ( $6\frac{3}{8}$ " diam.) Will accept 10"x10" transparency or 11"x11" opaque for projection. Rapidly interchangeable from one to the other.

**Pyramid Enterprises**, 3815 Trimble Road, Nashville, Tenn. The Reflectograph Tape Recorder has three motors, two to three recording heads, interlocked micro-switch controls, precision-made mechanism reducing wow and flutter content, continuously variable speed control from 3.75 to 8.5 inches per second while operating or stationary, permitting recording or playback where supply voltage is below normal. Employs flywheel drive. Inching control. Complete electrical interlock all controls. Servo-operated brakes. This unit is particularly useful for professional recordist and those specializing in the scientific investigation of sound phenomena.

**Radiant Lamp Corp.**, 300 Jelliff Ave., Newark 8, N. J. **Booth N76.** Radiant Projection and Exciter Lamps include the new 500-watt T-10 single contact projection lamp, code EDK, which is used in the Viewlex "Powermatic" projector, Mansfield "Holiday" projector, and the latter's "Hi-Fi" and "500" models. Also the new 300-watt T10 single contact projection lamp, code CYC, which is used in the new Eastman Kodak "300" projector.

**Radiant Manufacturing Corp.**, 2627 W. Roosevelt Rd., Chicago 8, Ill. Among Radiant's several important innovations is a novel "Du-All" classroom screen which features a fine aluminized projection screen on one side and a flannel-board on the other. It is possible to switch instantly from one surface to the other, thereby combining projected and nonprojected aids with maximum teaching results.

Highly reflective DU-ALL screen surface provides bright, sharply detailed slide or film projection in semi-darkened rooms, permitting note-taking by the students while Dr. Rakove maintains normal supervision.

**Radio-Mat Slide Co., Inc.**, 222 Oakridge Blvd., Daytona Beach, Fla. For forty years the Radio-Mat slide has been a humble but very efficient servant for projecting announcements and information on the screen. Units may be quickly inserted in the typewriter and then easily mounted between slide covers for immediate projection. Gaining popularity in the military, education, medical, and religious fields. Make it yourself!

**Rapid Film Technique, Inc.**, 3702 27th St., Long Island City 1, N. Y. "Rapidweld" scratch removal process salvages valuable negatives and prolongs life of prints.

**Raven Electronic Manufacturing Co.**, Radionic Division, 3215 W. North Ave., Chicago 47, Ill. Ultrasonic portable, battery-powered, P.A. system and paging unit has 12-watt output using trumpet-type aluminum speaker with a voice range of a quarter of a mile. Intended for athletic field use, coaching, fairs, and other out-door functions. The operator carries the unit on a strap over one shoulder, leaving his hands free to handle the microphone.

**Shure Brothers Inc.**, 222 Hortrey Ave., Evanston, Ill. New microphones and studio pickup unit are among the latest offerings of this company. The model 430 is a multi-purpose, moderately priced microphone with built-in on-off switch. The Model 333 Unitron is a multi-impedance, uni-directional ribbon mike.

**Smith System**, 212 Ontario St., SE, Minneapolis 14, Minn. **Booth No. C-19.** Portable Shado-Screen. A unit especially adaptable to classrooms with flexible seating arrangements. Screen size 48x48-inches. Shadow frame telescopes to 4-feet high x 6-feet wide x 3-feet deep. Light-proof canvas is durable, fast-color. Shipped knock-down, the unit weighs 90 lbs. Assembled height 70-inches, width at casters 24-inches, length 50-inches. Sturdy tubular steel frame mounted on four 3-inch casters, two with side brakes. Reverse side of screen furnished in either cork or chalk board. Also showing safe-lock combination portable cabinet and projection table and mobile 3-in-1 all-steel cabinet for tapes, strips, slides, and films.

**Society for French American Cultural Services and Educational Aid**, 972 Fifth Ave., New York 21, N. Y. A new catalog of audio-visual aids, listing subjects dealing with art and architecture, crafts, entertainment, geography, history and present-day conditions, French language and literature, people of France, and science are available. Materials include motion pictures, kodalchrome transparencies and sound tapes, bulletin board exhibits, filmstrips, and other items.

**Society for Visual Education Inc.**, 1345 Diversy Parkway, Chicago 14. **Booths R-114, 115, 116.** Filmstrip-Projector Pico available through SVE authorized dealers. With each \$200 order for SVE filmstrips or slidesets, you receive a \$64.50 School Master "300" Projector free. When the order for filmstrips exceeds \$300, an \$84.50 School Master "500" is included.

**S.O.S. Cinema Supply Corp.**, 602 W. 52 St., New York 19. **Tel-Animastand, Tel-Animaprint Hat Press Titring Machine, and Sosolvex Film Cleaner.** The Animastand is a recently priced, self-contained animation stand for TV stations, producers, and educational institutions. Optical effects such as cuts, angles, zooms, or quick closeups are accomplished quickly and accurately. The Hat-Press titler produces titles, crawls, flip cards, and other titling effects utilizing ordinary printers' type and colored foil. Does away with ink and work is ready to use immediately. Sosolvex cleaner is safe, anti-static, and contains no carbon tetrachloride.

**Spindler and Seppic**, 2201 Beverly Blvd., Los Angeles 57, Calif. **Booth M-70.** Added to a long list of engineering contributions from this pioneer firm, is a new "Dual Selectroslide" projector accommodating 96 slides (2x2). Another model is just about completed to accommodate 100 slides (2 1/4 x 2 1/4) for either manual or remote control. A new aspheric condensing system materially increases the brilliance of the projected image even to the far corners of the screen. High speed lenses (f 2.5 and f 2.) are available.

**Standard Projector & Equipment Co. Inc.**, 7106 Touhy Ave., Chicago 31, Ill. **Booth F37-38.** New Model 200 Filmstrip Viewer with increased picture magnification and new **Desk-type Automatic Viewer** for 2x2 slides. Also exhibited will be a complete line of seven models of filmstrip and slide projectors, ranging from 150 to 1000 watt, and screens.

Desk-type Automatic Viewer with increased picture magnification

**Stromberg-Carlson Co.**, 1706 University Ave., Rochester, N. Y. Red telephone emergency alarm has been added to the intercom system available for school use. Instantaneous connection is made with every loudspeaker in the school. If a separate key is pushed, a siren sounds for additional attention-getting response. The emergency feature works within seconds even if the entire system has been turned off for some time.

**Strong Electric Corp.**, 87 City Park Ave., Toledo 1, Ohio. **Booth G-40.** Slide Projector and Spotlight. The Strong Universal Slide Projector, a powerful arc slide projector designed primarily for the projection of standard 3 1/4 x 4 slides will be shown. This equipment delivers approximately 7500 lumens to the screen. Also to be shown is the Strong Trouperette Incandescent Spotlight which employs a unique optical system to realize high intensities, particularly in the smaller spot size range. It is particularly adapted for use in small theatre groups, in schools, and for convention purposes.

**Talk-A-Phone Co.**, 1512 S. Pulaski Road, Chicago 32, Ill., offers a new model wireless 2-station system to its extensive line of cable-connected intercoms. Demand for answer-back facilities in connection with close-circuit TV teaching confronts AV specialists with new problems and new opportunities for service. Another line for the live-wire AV dealer to know—and sell. Intercom installations in dealer's own business save time, labor, money.

**Technical Service, Inc.**, 30865 Five Mile Road, Livonia, Mich. **Booths M-71, 72.** An extensive line of projectors using the noted DeVrylite mechanism, includes the "TSI DeVrylite" a compact, single-case, lightweight projector providing unsurpassed sound and picture for classroom or auditorium. The "TSI Duolite" offers a combination in a single machine of conventional front projection or TV-size built-in screen. The "TSI Model D" provides for continuous showing without re-winding or re-threading. The "TSI Moviematic" is a repetitive type with built-in folding screen, particularly useful for salesmen and for repetitive "point of sale" demonstration.

**Television Equipment Co.**, 161 E. Grand, Chicago 11, Ill. **Booths I-47, 48, 49.** Exhibiting Colortron lighting equipment for color photography, Auricon motion picture cameras for 16mm sound, Arriflex motion picture cameras in 16mm, Moviola editing equipment, motion picture and filmstrip splicers, closed circuit TV equipment, tape recorders, J. G. McAlister studio lighting equipment.

**United World Films, Inc.**, 1445 Park Ave., New York 29, N.Y. **Booth S-125, 126.** A new series of social studies motion pictures entitled "The Way We Live" series, presents the basic human activities in which man engages to supply a need or fulfill a desire. Photography by Louis de Rochemont Associates, editorial collaboration of C. F. Kohn, Northwestern, and W. A. Wittich, University of Wisconsin. The new films explore the lives of people, particularly emphasizing children, in horizontal studies of geographical areas around the world with varying climatic, economic, and cultural conditions. The first group available, "Family Living Around the World," includes "School Children," "Children at Work and Play," "Family Life," and "Homes."

**University Loudspeakers Inc.**, 80 S. Kensico Ave., White Plains, N. Y. A new series of hi-fi and public address units, both wide-angle and heavy-duty trumpet types, is now available, as well as a new submergence-proof speaker for marine and research installations. Hi-fi units include both factory assembled and do-it-yourself speaker enclosure kits, based on new horn-loaded designs.

**Vacuamate Corp.**, 446 W. 43 St., New York, N. Y. To eliminate the possibility of green film sticking in the projector, or tightening up in the magazine, Vacuamate, after several years of research, perfected the "no-en" treatment for continuous projector film. "No-En" provides a glossy smooth dry surface to the film on both emulsion and base so that a maximum amount of slipperiness is achieved, permitting the film to ride smoothly during projection.

**Victor Animatograph Corp.**, Davenport, Iowa. **Booths H-43, 44, 45.** Showing Victor 16mm sound motion picture equipment including the Sovereign 25 and Assembly 10 sound projectors, the Victor 1000 arc projector, Victor Megasound magnetic attachment for Victor projectors, the Victor Microscope, a compact and powerful microphone projector, mobile projector stands, microphones and accessories, Kalerit and Craig splicers, rewinds, editor-viewers, and other items of movie editing equipment.

Victor 16mm sound motion picture equipment features the latest in AV developments.

**Viewlex Inc.**, 35-01 Queens Blvd., Long Island City 1, N. Y. **Booths O-96, 97.** Exhibit will feature the new V-500 Viewlex combination slide and filmstrip projector. It handles single and double-frame filmstrips for vertical and horizontal projection positions and 2x2 slides. It is low and streamlined and complete with carrying case. Contains a magnifying optical pointer, an automatic take-up attachment, and automatic feed attachment. Also being shown is the new Instructomatic projector for 2x2 slides which operates manually, by remote control, or completely takes over the showing of slides for pre-set exposure periods.

Viewlex combination slide and filmstrip projector. Handles single and double-frame filmstrips for vertical and horizontal positions, and 2 x 2 slides.

**Visual Education Consultants Inc.**, 2066 Helena St., Madison 4, Wisconsin. Featuring new sets of filmstrips: "Democracy in Action" and New Science Set. "Democracy in Action" includes: "Democracy in Action," "Democracy Builds a School," "Your Flag," "Declaration of Independence," "Duties of a Juror," "Our Country," "Day in the Life of a Senator," "The Way Our Laws are Made." Set \$19.50 or \$3.50 individually. Science Set includes "Comet and Microscope," "The Crill," "Osmosis," "Thermometers," "Heat," "Water," "Humidity," "Conquest of the Desert," "4-Stroke Cycle Engine," "Plants," "Plant Project," and other titles at \$3.50 each.

(See photo in next column)

# Product Review

**Visual Sciences**, Suffern, N. Y. Latest in the series of hand-drawn filmstrips in the areas of science and safety is a set of two rolls in the field of atomic energy called "The History of the Atomic Concept." Part I begins with early Greek ideas and traces the concept through the 1800's to Roentgen's X-rays. Part II includes later views, beginning with 20th century contributions of Thomson, Einstein, Rutherford, Bohr, and many others to the recently discovered Transuranic elements. Both rolls \$5, postpaid and insured.

**V-M Corporation**, Park & Fourth, Benton Harbor, Mich. **Booth T-40**. Exhibiting full line of record changers, stereo tape recorders, phonograph players and speakers. The Tape-O-Matic Recorder also plays stereophonic tapes, picks up from any source for monaural playback, and is usable even as a small PA system.

**Walloch & Associates Inc.**, 1589 Addison Rd., Cleveland 3, Ohio. **Booth S134**. Showing Discabinets (sectional and double-door) for storage and filing of phonograph records, tape recording reel cabinets (sectional and double-door) for tapes, film storage cabinets (sectional and double-door) for 16mm film reels and cans, film separator racks for 16mm reels and cans. Also presenting open type film storage cabinets with adjustable racks and the reelmobile, film handling truck for 16mm film reels and cans.

**Wayne State University**, Audio-Visual Materials Consultation Bureau, College of Education, Detroit 2, Mich. "Gregory Learns to Read" is the title of a new film showing the teaching of word recognition techniques—how children can be taught to read with understanding. 28 minutes. Color \$235; black-and-white \$135. Produced in cooperation with the Language Education Department of the Detroit Public Schools.

**Webcor Inc.**, 5610 W. Bloomingdale Ave., Chicago 39, Illinois. **Booths R 120-121**. Displaying its new line of high fidelity tape recorders and phonographs. Foremost in the complete line of tape recorders will be the Educator series, designed primarily for use in the field of education. A special "Teaching Aids" pamphlet prepared by the Webcor Audio Teaching Aids Department will be distributed. The Educator tape recorder features Webcor exclusive no-reel-turnover feature, permitting recording and playback in two directions without turning the reels over. Plays at 3.75 or 7.5 inches per second. Separate four-speed phonograph and loud speaker system complete the Educator series system.

**New Educator tape-recorder designed primarily for use in the field of education.**

**Webster Electric Co.**, Racine, Wisconsin. The Ekotape Recorder Model 270-AV is specifically designed for school use and features child-proof controls while maintaining beauty of design. Two-speed operation, in-line threading, double brake action, tape-out switch, selection finder, recording level meter, TV-type mike. \$269.50. Matched accessories available include remote control, headset, omnidirectional mike, foot control, mixer, stereo-speaker. Webster is also featuring a new completely transistorized intercom—the "Teletalk"—and a foolproof "retractomatic" crystal pickup that may be dropped on records or pushed across them without damage to pickup or record.

**Wilcox-Gay Corp.**, Charlotte, Michigan. New **Recordia** tape recorders include the Models 702, Student, and 712, Prep—both designed for hard usage in the school field. The very latest offering is the Jet, a single-purpose tape cartridge player-recorder handling both sizes of the Cousina cartridge. It will be priced at \$129.95.

**Yale University Press Film Service**, 386 Fourth Ave., New York 16, N. Y. The Pageant of America Filmstrips, thirty vital and historically accurate filmstrip documents, picture the life story of the U. S. from primitive Indian times to the present atomic era. Board of Editors includes Ralph H. Gabriel and Clyde M. Hill, Yale; William H. Hartley, Maryland State Teachers College; May Hall James, New Haven State Teachers College.

**Young America Films Inc.**, 18 E. 41 St., New York 17. **Booth M-69**. Exhibiting a broadening list of educational films and filmstrips, climaxing the company's greatest year of activity, in which it released 46 new motion pictures and 49 filmstrips. Emphasis will be given to the YAF Science Correlations, carefully compiled correlations of YAF films and filmstrips with each of the nine major series of elementary school science textbooks. Advance information on YAF releases for 1957-58 will be given.

**Zodiac Recording Co. Inc.**, 501 Madison Ave., New York 22. Newest and finest records for teachers and students of foreign languages \$9 per set, educational discount price. Many teachers are using these albums in classrooms and also recommending them for home study. Each Zodiac album includes three unbreakable hi-fi LP recordings, together with the text and translation, delightfully illustrated. A new "Teacher's Manual" will be ready in the Fall for this "French As You Hear It" and the other "as you hear it" languages. Another brand new development is the availability of the entire series on tape.

## Communique From Canada

By **Bernard Tessier**  
Canadian Director of NAVA

In August 1954, under the name of Rivard and Tessier, a commercial company for the distribution of audio-visual apparatus and material came into being, at Trois-Rivieres, Que., Canada. On November first of the same year, this organization became the Centre Audio-Visuel Inc.

To exercise an effective role in a relatively new sphere, where a particular technique and methodology occupy an important place, two conditions were essential to the success of the Centre: a) To know the available material and the techniques to employ, b) To impart to educators the knowledge acquired.

Contacts with leading associations interested in these questions, compilation of considerable documentation, and establishment of contacts with a good number of educators in Canada and abroad have enabled the Centre to discover problems and their adequate solution.

From the outset, the Centre has applied itself to cataloguing film strips existing in the French language, and distributing. It also has announced as one of its projects, the publication of lists of films for special uses.

As to apparatus, specialists have measured their possibilities and purposes. They have verified their efficiency, the ease with which they are operated and the manufacturers' service. Bulletins and descriptive folders have presented the conclusions to educators. To provide a more adequate distribution of the required material, the Centre Audio-Visuel now has formed a non-profit corporation under the name of Institut Audio-Visuel Inc. This society is at the disposal of educators for any expert advice on subjects pertaining to the communication of ideas by audio-visual means. It will diffuse its influence by recruiting members and the establishment of diocesan audio-visual services.

To assure the production of visual and sound material, adapted to present requirements, Nova Films Inc. disposes of the necessary personnel and equipment. Its main office and its studios are in Quebec city.

With the opening of the Centrale Audio-Visuelle, 452, des Forges street, Trois-Rivieres, all the audio-visual services are to be found under the same roof: the Institut, the Centre, and Nova Films.

A projection and audition room is at the disposal of the public and committees for the evaluation of material.

# BRAINSTORM ON EQUIPMENT

What we need is a good new fashioned brainstorming session on audiovisual equipment for classroom use. Such a session might very well produce some "wild" ideas that could result in the manufacture of equipment much better suited than present equipment to meeting the instructional needs of today and tomorrow. "But what's wrong with present equipment?" you ask.

Nothing, absolutely nothing. We have no criticism to make of a single piece of audiovisual equipment manufactured today. We have excellently designed and well functioning motion picture projectors, and filmstrip projectors, and slide projectors, and record players, and tape recorders, and radios, and television receivers, and opaque projectors, and overhead projectors, and etc! . . . Do you begin to see what the problem is? Let's look at this problem from the point of view of the teacher in the classroom.

Let's take a single very practical teaching situation. Suppose a teacher wants to project a sound picture on "The Southwestern Indians" to be followed up by playing records of Indian music. Naturally there'll be discussion and suppose the teacher wants to record on tape what the children have to say. In any school you've ever seen, just how easy would it be for a teacher to reserve and assemble these three common pieces of audiovisual equipment needed for this teaching situation? If she were successful, just where would she put this equipment in her classroom? How simple would it be to operate these three pieces of equipment one after the other?

This whole audiovisual field has developed faster than we've realized. Teachers are using more equipment, different kinds of equipment, more often than ever before. The day when there was but a single motion picture projector, a single slide projector, and one record player per school is fast passing. Today's teaching and tomorrow's schools require multiple items of each kind of audiovisual equipment. In the schools for today and tomorrow light control is being provided for every classroom for the projection of pictures. Teachers are expected to use a wide variety of audiovisual equipment in their teaching. Teachers have a right to the ready availability of any type of equipment they need in order to do the best teaching job. If a teaching situation calls for the use of a projector, a record player, and a tape recorder to be used in the same period, these should be readily available and easy to use.

The more you think about it, the more likely it seems that better solutions could be found for our equipment problems. The inter-related and increasing use of various kinds of equipment presents new angles and implies changing needs. **The present trend indicates that the day is coming when a full complement of audiovisual equipment will be as standard for the classroom as the blackboard was yesterday.** For this our present audiovisual equipment is poorly designed. Now each piece of equipment is highly portable, fitting neatly into its

own carrying case. Each piece of sound equipment has its own amplifier and speaker. For each amplifier there are three or more knobs to turn. There are a dozen electric cords. Although each piece of equipment considered by itself is efficiently designed, the total makes an inefficient conglomerate.

We ought to be able to figure out a design for audiovisual equipment that will better meet the needs of the modern classroom where the teacher is expected to use a wide variety of audiovisual equipment in his teaching. So let's brainstorm on this problem to see what we can come up with.

Ordinarily for a brainstorming session you assemble a group of selected people around a conference table; you present the problem; and if you've got the right group and they're properly challenged the ideas for solving the problem flow out profusely. We're suggesting a different kind of brainstorming session for this equipment problem. A brainstorm by mail, if you wish. Write down your ideas, and mail them in.

Or maybe we should have a lot of little conversational brainstorming sessions at the summer conferences in Chicago — at EFLA, at NAVA and the Trade Show. In all of our brainstorming, we should observe the basic rules, however: (1) Hold the criticisms until later. Don't argue about the problem, and don't judge any proposed solution yet. (2) Think wildly. Shift into free wheeling. Let your imaginations soar. (3) Come up with as many and as varied ideas as you can. Quantity is important. (4) Try to combine your thinking with the other fellow's thoughts. Try to "hitchhike" or improve on another's suggestions.

Are you ready? There's the bell. Here's a starter upon which others can hitch a hike. We propose a MOBILE AUDIO-VISUAL CENTER as standard equipment for all classrooms. It's on wheels so you can move it easily anywhere in the room. The essential, built-in, components of the MOBILE AUDIO-VISUAL CENTER are an amplifier and a speaker. The additional components that can be added as required would include a microphone, a record turntable, magnetic recording mechanism, a radio tuner, a motion picture projector, still picture projectors, and what else? Every teacher wouldn't want all of these added components. But any teacher could have any that he wanted and needed. The components could be on a permanent or short-term loan to a teacher's MOBILE AUDIOVISUAL CENTER depending upon his teaching needs. There would be a place for any and all components in the single cabinet and all would be readily accessible. What else should there be?

Don't you think it's highly possible that more functional and more efficient equipment could be designed and built for classroom use?

Come on, everybody, let's brainstorm on this problem for a while and see what develops.

*Paul C. Reed*

# Tape For TOP

## Listening Appeal

by **Merlyn Herrick**  
and  
**Henry C. Ruark, Jr.**

*Merlyn Herrick is Production Supervisor and Instructor in the Audio-Visual Center of Indiana University. He is also Educational Author for new Indiana film "Tape Recording for Instruction." Henry C. Ruark, Jr., was formerly an Associate in the Audio-Visual Center of Indiana University, but is presently Director of Information for the National Audio-Visual Association.*

**I**N A previous article that appeared in the December, 1956 issue of Educational SCREEN, pages 514 and 515, some recording techniques were discussed which would enable teachers to obtain better results with the tape-recorder in several classroom applications. Now—let us consider another recording situation which necessitates work of near-professional quality . . . the recording of program material for release on commercial radio stations, or for similar public presentation.

Broadcast stations must renew their operating licenses periodically, and it is believed that license renewals are granted partly on the basis of the public service record of the station. A good school program has audience appeal and is a choice bit of public service which can win more friends for the radio station. Thus a radio station will usually welcome good program material. Unfortunately, inexperienced performers often act most unpredictably before the microphone, and many station program-directors hesitate to take a chance on a live school presentation. The tape recorder can solve this problem and restore school programs to a position of desirability through the ease with which a taped program can be edited.

Editing makes it possible to insure that only the best performance will be aired. "Fluffs" can be eliminated before becoming a source of embarrassment for both the school and the station.

Careful editing can cover a multitude of sins. Tape editors can correct mispronunciations, eliminate extraneous sounds, and rearrange a series of performances to achieve the best overall result. A realization of the possibilities that lie in editing can relieve much of the strain that might otherwise mar the performance of a school group.

Since most non-professional recorders are of the dual track variety, the teacher who is editing a program must keep in mind the physical relationships between the two possible tracks. As shown graphically in figure A, a single track recorder makes only one recording along the length of the tape. Editing is a simple matter of cutting and splicing the tape according to the results desired. Dual track recording is illustrated in figure B. Two separate programs are recorded side by side and in opposite directions. As shown in figure C, editing sections of one track requires cutting the second track with resultant damage to that program. The easy way out of this problem is to use only one of the two tracks, leaving the second unrecorded.

**A. Tape with single track recording where splicing is easy**

**B. Tape with dual track recording; Programs are recorded on each side**

**C. What happens to the other program when one needs splicing**

Such a recording may, in fact, be absolutely essential to enable the tape to be played on the station's professional equipment. Before taping a program, be sure to check with a station representative to determine such requirements as the type of track, tape speed, and the amount of silent leader that should precede the program.

**D. Unidirectional magnetic microphone, sensitive to sounds from one side**

When recording for broadcast, the recordist must consider the need for a good microphone and for the best acoustical conditions his school can provide. The microphone furnished with non-professional recorders is usually a crystal or an inexpensive magnetic unit. Its cable is seldom more than six feet in length allowing little opportunity for placing the microphone for best results. Also, the characteristics of these microphones seldom provide the fidelity of response desired for broadcasting, so it is wise to consider a better quality magnetic microphone such as the type shown in figure D. This type of microphone is ordinarily supplied as a unidirectional microphone, that is, it has maximum sensitivity to sounds coming from the front. This characteristic is advanta-

gous in providing a reduction of sensitivity to sounds such as reverberation, audience noise, and machine noises which come from directions other than the desired source. When it becomes necessary to record sounds originating from all sides of the microphone, it can be converted to non-directional pickup by aiming it at the ceiling. Figure E shows a comparison between the sensitivity patterns of a directional and a non-directional microphone.

E. Sensitivity patterns of directional and nondirectional microphones

The choice of a microphone should be made with the assistance of your audio-visual dealer to insure the purchase of a unit that will satisfactorily match your recorder. A number of good dynamic microphones can be purchased for prices ranging from \$40.00 to \$50.00, list. Broadcast quality microphones would be equally good but usually cost at least twice as much, and may not fit your recorder without special matching equipment.

Two popular types of program material for broadcast use are choral performances and band or orchestra selections. Choral groups often perform on risers. By using a good microphone raised ten to fifteen feet in the air, the mike can be located at a focal point

for all the voices in the group, being equally near the several rows of singers. If one section of the group needs to be strengthened or emphasized, the microphone can be placed nearer that group. (See figures F, G, H.) Trial recordings will enable the director to select the best microphone position for a well-balanced reproduction.

C. Mike lowered where one section needs strengthening

Band and orchestra recordings often require a microphone at an elevated position also, to insure a balanced recording. Here again, a few trial recordings will point out the best microphone position. A good starting point for the microphone is ten to twelve feet above the floor, with its most sensitive side pointed toward the section producing the weakest sounds.

H. Suspended mike for chorus

The microphone can be suspended from the ceiling, as is often done in the professional studio, or it can be used on a floor stand placed on a stool or table. Sometimes it is possible to acquire the heavy base to hold the sort of advertising signs found around gasoline stations. This consists of a heavy cast iron base with a piece of iron pipe

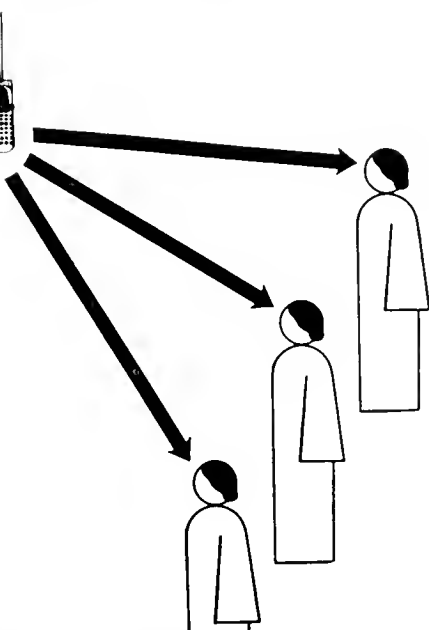

screwed into it. The microphone can be fitted to an appropriate length of ordinary electrical conduit and inserted part way into the pipe. With a six foot pipe and a ten foot length of conduit, the microphone can be raised to heights between ten and fifteen feet.

It is often desirable to provide a second microphone for use by soloists or by the announcer. This, too, should be a good quality microphone. When using an additional mike, a mixer will be needed to establish a proper balance between voice and orchestra. Although it is possible to use a simple jack box equipped with individual volume controls for each microphone, best results are obtained with an electronic mixer which uses vacuum tubes to effectively isolate the individual microphones. Either type can be furnished by your audio-visual dealer or by radio and electronic supply houses.

A problem that often remains after a careful set-up for recording has been made, is the presence of annoying hums or buzzes in the background. While the best approach to this problem is to enlist the aid of someone experienced in electronic apparatus such as an engineer from the radio station, the school recordist can apply several simple remedies. Often merely reversing the plug in the AC outlet will greatly reduce hum from the power line. Also, a ground wire attached to the metal chassis of the recorder and connected to a water pipe may reduce any hum present. **CAUTION:** Be sure that the recorder power cord is unplugged before making such a ground connection. If there should be a faulty connection in the recorder, a severe shock could result from touching the water pipe and the wire while making the connection.

Fluorescent lights are frequently a severe source of hum in electronic equipment and should be turned on and off several times to determine whether they are causing it. This applies to lights in the recording room as well as those in adjacent rooms. Other sources of extraneous noises that may ruin a recording are disturbances from motors, generators, welding equipment, clock systems, and bell systems. Of course, the obvious noises of "passing" bells and students changing classes must be taken into consideration.

While this article has emphasized recording for broadcasting, all of the techniques and considerations mentioned simply help to produce better recordings generally. So why not treat your P.T.A., business men's groups, or any other audiences, to programs via the tape recorder?

F. Mike elevated to reach several rows of singers

# SCIENCE FAIR

## exercise in visual education

by Paul Mulligan  
Director of Visual Education  
Revere Public Schools  
Revere, Massachusetts

**H**AVE you had a science fair in your high school? The science fair, an old-style school exhibition which has been streamlined a bit, has had phenomenal growth in this section during the past few years. The parochial school system started the trend a few years ago. Almost every public high school sponsors a yearly science fair now. The whole thing winds up with a statewide exhibition, which features the best projects from the local fairs, at the Massachusetts Institute of Technology.

The idea is an excellent advertisement for visual education. It has the virtue of developing pupil participation in the creation of models and mockups and in the visualization of scientific processes. It is easy to promote and fulfills a great need in education, the promotion of pupil interest in the study of science.

Various schools have their own way of organizing the fair. The promotion and development in this school department was done by Mr. D'Orlando and his seven associates in the science department. The project was designed to bring about mass participation by the pupils; so it was mandatory for every science student to participate in order to fulfill the course requirements. All of the work was done outside of school time.

To keep some uniformity in the size of the exhibits, two types of mounting boards were used. For large projects, a piece of plyboard 3 by 4 feet was allowed and for smaller ones, cardboard or plyboard 20 by 30 inches. Both boys and girls had to participate. They were given about two months to prepare the material. Every project

was explained by its creator to his class or to teams of judges who were brought in for the purpose. Over one thousand pupils participated in this particular fair which was open to the public for one afternoon and evening.

The parents and local press received the presentation with acclaim. From the viewpoint of public relations the results were immeasurable. In appraising the project as a teaching exercise, Mr. D'Orlando and his staff concluded that even in cases where pupils received help in preparing the more complicated exhibits, the project had excellent value, for the pupils had to understand the scientific points involved in order to explain them correctly.

Some students did a real professional job with their creations. A gifted

youngster whose I.Q. flirts close to the genius level, was explaining a very complicated electronic system to an interested group. A visiting science teacher, who was not familiar with the particular pupil's abilities, was attempting to score the project. He asked, "Did you build this whole thing yourself, sonny?"

The youngster replied with the dignity and impassiveness of the true scientist, "Yes sir, I built it, but I had as consultant one of the best engineers in General Electric, my Dad."

If you are a Visual Education Director, get together with your science department and try promoting a science fair in your high school. It is excellent visual education, and you will be pleasantly surprised with the results.

Something new in Public Relations was staged by the Revere Public Schools, Revere, Mass., when over a thousand Science students exhibited work done outside of school hours to enthusiastic parents and Press. Both boys and girls participated. Participation was mandatory in order to fulfill course requirements, and the students staged a huge show and enjoyed it.

## Coronet Films in Color

in 1956, with the overall aim of improving instruction by whatever means is found most effective.

An immediate Commission pronouncement was made at this first meeting, held in Washington, D. C., recommending a standard of not less than one percent of the annual per pupil budget to be expended on audio-visual instructional materials and equipment.

Within a few weeks, the Commission added to this long-needed "budget yardstick" a set of recommended minimum standards for audio-visual equipment to implement public school audio-visual programs.

### Three Dollars a Pupil

The commission believed that the minimum cost of the local school pro-

at least one per building

Opaque projector

1 per building

Record players (3-speed)

1 per kindergarten or in room where child receives his first school experiences. One per five other classrooms; at least two per building

Tape recorders

1 per 300 students or major fraction; at least one per building

Radio receivers (AM-FM)

1 per five classrooms; at least two per building, where appropriate programs are available

Television receivers

1 per building, where appropriate programs are available

Overhead projectors (7 by 7 in. or larger) 1 per building

Screens (square: 60 by 60 in. or larger)

rich two classrooms

the opaque projector or the d projector should be capable (cting 3¼ by 4 in. slides.)

mmission also recommended mber of the school staff "be onnsible to the audio-visual This person must be given time during school hours to ssional job." Basic minimum rol should consist of "some method . . . to reduce the iently for satisfactory projec- ach classroom.

a Williams of Syracuse Uni- airman of the commission,

however, that "This does that mere purchase of equip- rt of skillful utilization, does o solve the problems of bet- tion. . . . One of our chief has been to answer the big from school administrators, nd teachers: What modern ur schools need today to do ob?"

ove recommendations won rt from the board of direc-

tors of the National Audio-Visual Association, the trade organization of the Audio-Visual industry.

Because these measures represented clearly and simply defined minimum standards at the national level, they are being widely considered by administrators. Since these are *minimum* and not optimum standards there are many school systems over the country where these standards are already being met.

Organizations with representatives participating in the Commission are the Department of Audio-Visual Instruction of N.E.A., the Educational Film Library Association, the Association of Chief State School Audio-Visual Officers, the American Association of School Librarians, the National Council of Churches, the National Association of Educational Broadcasters, the

Color surrounds us on every side, a constant source of pleasure and enjoyment. Every day brings something new in color, as indicated by the ever-increasing use of color in magazines, graphic arts, industrial products, theatrical films, and in television.

Teachers and educators agree that this trend to color is at work in the classroom. They find that educational films in color are not only more appealing and effective, but are actually essential for clarity in a number of teaching areas.

## a c o l o r f u l w o r l d

This little book is the story of Coronet films in color. It tells why color films are indispensable for effective teaching, presents a partial list of the color films in Coronet's unequalled offering, and shows the part which Coronet Films—the most honored name in educational motion pictures—plays in making available authentic full natural color films in virtually every subject area—and at all grade levels.

For complete descriptions of nearly 700 Coronet teaching films, and for full information as to how you may preview or purchase these outstanding motion pictures, simply address:

# Coronet Films

DEPARTMENT CM-126

The magic of

*Color* in

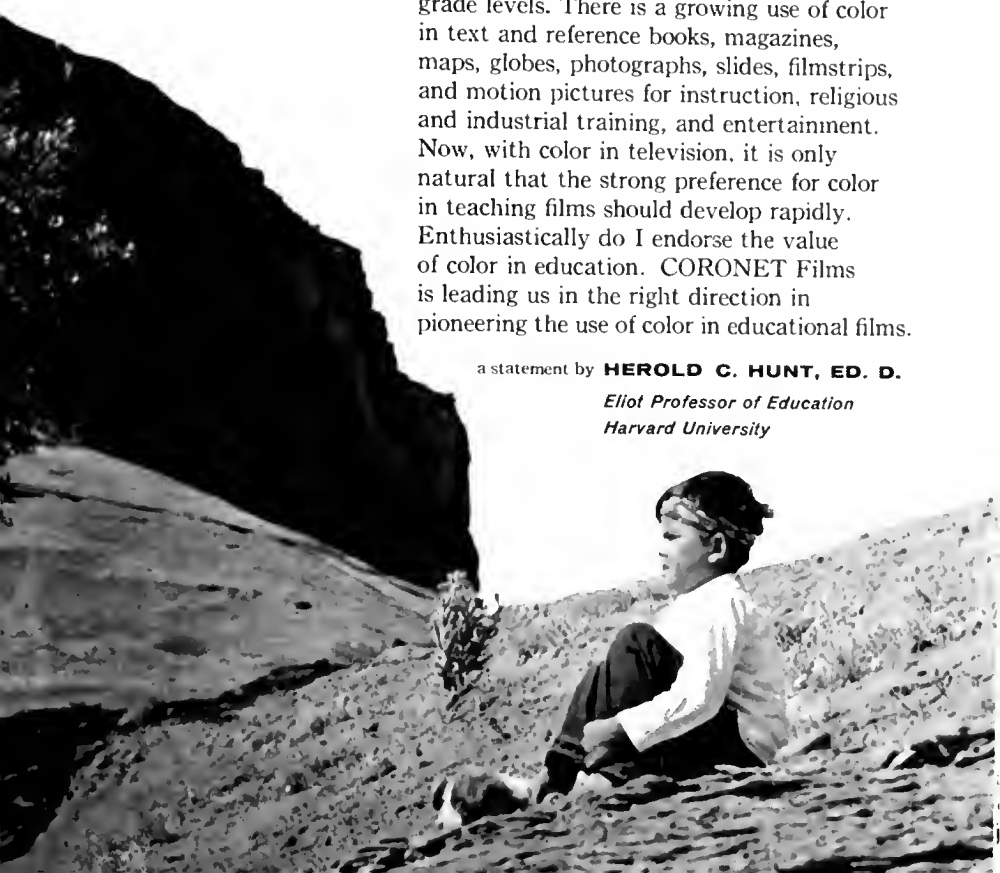

# Coronet Films

16MM MOTION PICTURES

Color is nature . . . and children live in their colorful world of reality. So the most effective teaching materials use color to capture the imaginations of pupils at all grade levels. There is a growing use of color in text and reference books, magazines, maps, globes, photographs, slides, filmstrips, and motion pictures for instruction, religious and industrial training, and entertainment. Now, with color in television, it is only natural that the strong preference for color in teaching films should develop rapidly. Enthusiastically do I endorse the value of color in education. CORONET Films is leading us in the right direction in pioneering the use of color in educational films.

a statement by **HEROLD C. HUNT, ED. D.**

*Elliot Professor of Education  
Harvard University*

# Coronet *Color* Films

**recreate reality**

Through no other visual medium can the teacher present a more vivid reconstruction of life. Nothing can provide a closer approach to reality—for added

emphasis . . . to make distinctions unmistakably clear . . . to bring a subject alive dramatically—right in the classroom!

**Coronet color films stimulate greater interest in the subject!**

The fact that color is pleasing aesthetically and emotionally is well established. Since *liking* a film and *learning* from that film are closely related, the greater appeal of color motion pictures has the desired effect of achieving more learning through increased interest.

**Coronet color films induce longer retention of useful knowledge!**

Once interest is aroused and a desire to learn is created, color motion pictures provide additional impact on the viewer by their unique ability to create lasting and vivid impressions. Distinctions are made clearer . . . emphasis is properly placed . . . false impressions are avoided . . . and important facts are retained longer!

# Coronet

**Historical films in color—the only true picture of the past**

Coronet Films, in bold, natural color, capture scores of exciting historical periods. The democracy of ancient Greece, with its classic dramas performed in white theaters under the clear, blue sky; the stirring achievements of Rome, re-enacted in the Forum and in the palaces on the Palatine Hill; the pageantry and beauty of medieval life, set among cathedrals, castles, and crusades; the Aztec cities of Mexico, the River Jordan, and the civilization along the Nile—all come to life in Coronet color films. In our own history, films reconstruct the dramatic events of the formation of the United States: the climax of the Revolution at Yorktown, the framing of the Constitution, life in the early colonial settlements and the great westward migrations. The tremendous impact of Coronet films in color, unrivalled by any other teaching device, places today's pupil in the center of events of another age.

**Coronet color films accurately reveal the intricacies of science**

A greenish-yellow gas, a deep red liquid, and a mass of yellow crystals—immediately identifiable in Coronet color films as basic characteristics of three chemical elements. These vivid images become so indelibly impressed on pupils' minds that they long remember one of the tests by which scientists recognize and classify these elements: fluorine, bromine, and sulphur. This is only one example of the many ways Coronet color films speed the teaching of scientific subjects and clarify their complexities for science pupils. Color films also enable students to view every detail of microscopic life as it carries on the fundamental processes of nutrition, locomotion, reaction, and reproduction.

# Films in *Color* create lasting impressions

**C**ORONET Films is *the* pioneer in the development of educational motion pictures in color. For more than 17 years, Coronet has produced most of its films in color. As a result, more than 650 color films in every important subject area are currently available from Coronet. The strong preference for color prints among those who use films regularly proves conclusively that color is indispensable in educational motion pictures.

**Immortal works of art are  
flawlessly captured in Coronet  
color films**

**I**ndispensable color films permit pupils to see the art of every age at its very best, without stepping from the classroom—in brilliant natural color. Only color films can do justice to heroic Egyptian sculpture, to delicate medieval tapestries, and to massive cathedrals. Only in color can the student fully appreciate the subtle beauties of Renaissance palaces in Florence and Rome. Coronet color films convey the ageless appeal of the paintings of the great masters: Titian, El Greco, Rubens, Leonardo da Vinci, Rembrandt, Giotto, and Gainsborough. The unique value of films in color to the student in pursuit of artistic understanding is immeasurable.

The most popular

# Color

is nature

**Superb color films bring every corner of the earth to the classroom**

Around the world, Coronet camera crews convey on film all the natural beauties, brilliant costumes, sacred rites, and characteristic customs which give each people a flavor distinctly its own. Consider, for example, the variety of physical settings in which people of the world live. One cannot realize, even in imagination, what living by a Scandinavian lake means in contrast to life on the fringes of the Egyptian desert. Scenes from Coronet films of green irrigation projects, stretching through brown, arid lands; of tropical Hawaii, abounding with colorful flowers; of the beauties of the changing seasons in Norway, are striking examples of the difference color makes in our understanding of other lands and peoples.

The very names of the more than fifty birds described in Coronet color films indicate the importance of color in nature study—the indigo bunting, the yellow warbler, the redstart, the purple martin, the bronzed grackle, and many others. There are Coronet color films on a variety of other nature subjects: flowers, trees, animals, and insects. Comparison of these color films with the same subjects in black and white proves conclusively that vibrant, natural color is essential for identifying wildlife and for maximum enjoyment of its beauties. Children discover again and again that the added dimension of color lends reality to the study of life, and enhances the pleasure of learning.

## Throughout the country

these authorized Coronet Color Film Centers stand ready to serve your Coronet color motion picture needs quickly and efficiently. Every film listed on the preceding pages is available from these film libraries in full, natural color, at low rental rates. Plan today to take advantage of this simple, convenient way to obtain any of the most popular Coronet color films. For full information concerning rental rates, bookings, and service regulations, simply write to your nearest Coronet Color Film Center.

**Revere, Massachusetts**

**H**AVE you had a science fair at your high school? The fair, an old-style school which has been streamlined and had phenomenal growth in during the past few years. The reorganized school system started a few years ago. Almost every high school sponsors a year fair now. The whole thing with a statewide exhibition, features the best projects from fairs, at the Massachusetts Institute of Technology.

The idea is an excellent method for visual education. The virtue of developing pupil participation in the creation of models, mockups and in the visualizing of scientific processes. It is educational and fulfills a great need in education, the promotion of pupil participation in the study of science.

Various schools have their own methods of organizing the fair. The promotion and development in this school department was done by Mr. D'Orlando and his seven associates in the science department. The project was designed to bring about mass participation by the pupils; so it was mandatory for every science student to participate in order to fulfill the course requirements. All of the work was done outside of school time.

To keep some uniformity in the size of the exhibits, two types of mounting boards were used. For large projects, a piece of plyboard 3 by 4 feet was allowed and for smaller ones, cardboard or plyboard 20 by 30 inches. Both boys and girls had to participate. They were given about two months to prepare the material. Every project

To:

CM-126

Printed in U.S.A.

Something new in Public Relations was staged by the Revere Public Schools, Revere, Mass., when over a thousand Science students exhibited work done outside of school hours to enthusiastic parents and Press. Both boys and girls participated. Participation was mandatory in order to fulfill course requirements, and the students staged a huge show and enjoyed it.

# The Audio-Visual Commission on Public Information

By Dr. Charles F. Schuller, Chairman

**T**HE American people need to know a great deal more about audio-visuals and what they can do when applied in education, industry and the church.

The Audio-Visual Commission on Public Information was formed to bridge the gap between audio-visual leadership and specific target audiences needing basic information about the efficacy of applied audio-visuals.

The Commission was conceived as a functioning action group whose mission was to plan and program an overall public relations effort, select specific target audiences, devise projects to reach those audiences on a priority basis, and develop a series of action pieces for publication and distribution.

The work of the Commission began at the first Audio-Visual Leadership Conference at Lake Okoboji, Iowa, in 1955. There national leaders of all a-v groups agreed on the need for the program and an action group to get it under way.

The Commission was formed early in 1956, with the overall aim of improving instruction by whatever means is found most effective.

An immediate Commission pronouncement was made at this first meeting, held in Washington, D. C., recommending a standard of not less than one percent of the annual per pupil budget to be expended on audio-visual instructional materials and equipment.

Within a few weeks, the Commission added to this long-needed "budget yardstick" a set of recommended minimum standards for audio-visual equipment to implement public school audio-visual programs.

## Three Dollars a Pupil

The commission believed that the minimum cost of the local school pro-

gram should be "one per cent of the school's instructional budget; used to provide all materials of instruction except textbooks; and exclusive of all salaries."

L. C. Larson, director for the Audio-Visual Center at Indiana University and U. S. delegate to the Paris UNESCO, stated that the annual pupil cost for instruction would run between \$250 and \$600 in the U. S. "That means that with an average pupil cost of \$300 annually, educators cooperating for the highest efficient use of the school dollar can employ the most modern teaching tools for only \$3 per pupil," Larson explained.

## Minimum Equipment

The commission believed the following equipment essential for inclusion in the school audio-visual program:

16mm sound projectors

1 per 300 students or major fraction thereof; at least one for each building

Filmstrip and 2 by 2 inch projector

1 per 200 students or major fraction; at least one per building

Opaque projector

1 per building

Record players (3-speed)

1 per kindergarten or in room where child receives his first school experiences. One per five other classrooms; at least two per building

Tape recorders

1 per 300 students or major fraction; at least one per building

Radio receivers (AM-FM)

1 per five classrooms; at least two per building, where appropriate programs are available

Television receivers

1 per building, where appropriate programs are available

Overhead projectors (7 by 7 in. or larger) 1 per building

Screens (square: 60 by 60 in. or larger)

1 per each two classrooms

(Either the opaque projector or the overhead projector should be capable of projecting 3¼ by 4 in. slides.)

The commission also recommended that a member of the school staff "be made responsible to the audio-visual program. This person must be given sufficient time during school hours to do a professional job." Basic minimum light control should consist of "some device or method . . . to reduce the light sufficiently for satisfactory projection" in each classroom.

Dr. Don Williams of Syracuse University, chairman of the commission, cautioned, however, that "This does not imply that mere purchase of equipment, short of skillful utilization, does anything to solve the problems of better instruction. . . . One of our chief concerns has been to answer the big question from school administrators, parents and teachers: 'What modern tools do our schools need today to do a better job?'"

The above recommendations won full support from the board of directors of the National Audio-Visual Association, the trade organization of the Audio-Visual industry.

Because these measures represented clearly and simply defined minimum standards at the national level, they are being widely considered by administrators. Since these are *minimum* and not optimum standards there are many school systems over the country where these standards are already being met.

Organizations with representatives participating in the Commission are the Department of Audio-Visual Instruction of N.E.A., the Educational Film Library Association, the Association of Chief State School Audio-Visual Officers, the American Association of School Librarians, the National Council of Churches, the National Association of Educational Broadcasters, the

University Film Producers Association, the A-V Communications Division of the National University Extension Association, and the National Audio-Visual Association. Commission members are usually officers or board members of the organizations. Dr. Don Williams, Director of the Audio-Visual Center at Syracuse University, served as Commission Chairman for the first year.

The Commission is now at work on a group of projects and publications designed to reach each of its four main target audiences, which are school superintendents and school board members, instructional film users at all levels, legislative bodies, and — perhaps most important of all — the general public.

The first Commission publication, released early this year, was a pamphlet entitled "Telling Your A-V Story," designed to help build public awareness and understanding of local a-v programs by serving as a guide to practical public relations for a-v people. Nearly 10,000 copies have been distributed, and requests for additional copies are constantly being received.

A second major Commission publication, a simplified graphic summary of the many research studies showing the effectiveness of audio-visuals, has been prepared by Dr. Walter Wittich and his staff at the Bureau of A-V Instruction of the University of Wisconsin. The first press run of 10,000 copies is in distribution to audio-visual personnel across the nation, and a second press run of 100,000 to supply quantities for the main target of the piece — the general public — is already scheduled.

Next off the Commission press will be a strikingly illustrated sixteen-page picture booklet called "Gateway to Learning," which tells the audio-visual story with a maximum of fine photographs and a minimum of texts. This piece will contain, besides the photographs, a short summary of basic research presented in graphic form and a group of endorsements of applied audio-visuals from leaders in many walks of American life, including President Eisenhower, leaders of labor, industry, and business and church figures.

"The Case of the Curious Citizens," a carefully researched and thoroughly pre-production-tested filmstrip and slide presentation developed by Adrian TerLouw, educational consultant of Eastman Kodak, will be premiered at the National Audio-Visual Convention and Exhibition. This presentation is designed for general use by audio-visual and other personnel interested in better instruction, and tells the

story of two curious parents and what they find out about the uses of audio-visuals in the school their child attends. It will be available for showing to any interested group in the country.

Other Commission projects "in the works" include a series of specially produced taped radio programs on various phases of audio-visual application and values; a national picture file on audio-visual illustrations and topics; an administrator's handbook to aid in organizing and carrying out a practical a-v program in the public schools; a listing of selected free or low-cost motion pictures on a-v utilization; booklets on specific ways of using some of the public relations media, such as radio, television, and the general press; and a new project to which the Commission is assigning high priority — a budgeting guide which is intended to create a budgeting pattern for a-v materials and equipment similar to that which exists for textbooks.

It has taken numerous long, hard-working sessions to build the Commission pattern of operation and to hammer out the basic understandings and policies on which any such group must work. But the efforts of so many persons, both in and out of the Com-

mission, are beginning to bear fruit as working tools like the publications described get into distribution and wide use.

The Commission stands ready to help as a coordinating agency and welcomes suggestions and information as well as questions and problems, from school administrators, audio-visual personnel, and others with a primary interest in the improvement of instruction through the more effective application and use of instructional materials.

Commission members recognize that projects thus far completed, or well underway, represent only a beginning. Additional projects, now in planning and research stages, will continue to implement and supplement the work of professional education groups in the instructional materials fields through effective interpretation to all who have an interest in good schools.

THIS SIR, IS OUR DARK ROOM

# Filmstrip in Grade Schools — by Margaret C. Squicciarini

**A**T THE Tremont Avenue School in Medford, N. Y. (Pachogue, L. I. School Dist.), the use of filmstrips in all curriculum areas has been particularly extensive since the school first opened its doors in 1953. The initial audio-visual equipment included 14 filmstrip projectors, one for each primary classroom (grades 1-3) and two for circulating use in the intermediate grades.

A filmstrip library has been built up to 395 titles in the areas of language arts, science, citizenship education, health and art in addition to an average of six correlated reading filmstrips permanently assigned to each primary classroom. All the filmstrips, with the exception of the reading strips, are kept in a special filmstrip file which is centrally located and adjacent to the faculty mailboxes. The filmstrips are easily accessible and a "check out" system similar to that used in checking our reference books is provided.

At the beginning of each school year, one member of the staff is selected to be in charge of the audio-visual materials in the school and this person assumes responsibility for seeing that the strips are returned to the file in good condition, mended and replaced if necessary.

Each teacher assumes responsibility for the general maintenance necessary to keep the projector clean and in good condition during the school year. Each projector is kept on a movable wooden cart, covered with a plastic mixing bowl cover to protect it from dust. Camel's hair brush and lens paper are available for cleaning the lens.

During the summer months any major repair job on any of the projectors is done by a professional service man. It is interesting to note that to date, the amount of professional servicing of these machines, although in daily use throughout the school year, has been negligible due to the excellent care and intelligent use by each of the classroom teachers.

An audio-visual workshop is given early in the school year at a faculty meeting by the teachers on the staff most familiar with the A-V equipment which in addition to the filmstrip projectors includes a tape recorder, six three speed phonographs, an FM radio, a 35mm camera and a 16mm sound projector.

In the primary area, each of the 12 teachers uses the filmstrip projectors an average of 20 minutes a day. The majority of this time is used in viewing correlated reading filmstrips for the introduction of new material and for review work in reading. The reading

program at this level is further enhanced by the use of the extensive collection of stories in the language arts series of filmstrips available to the teacher.

At this level also, the citizenship education, health and safety filmstrips are frequently used to initiate and stimulate interest in unit studies.

At the intermediate level, the science, arithmetic and social studies filmstrips are widely used to clarify and visualize concepts presented by the texts and to further stimulate the interest of the class and to encourage discussion. The strips were frequently used for remedial reading. Teachers in the fourth to sixth

grades reported using the filmstrips for an average of 30 minutes a week. They also stated that the availability of the machines was a limiting factor in the amount of time they were used.

The impetus for this extensive use of filmstrips can unquestionably be laid to the use of a reading series that requires a correlated filmstrip. There is little doubt, however, in the minds of the staff at the Tremont Avenue School that the use of filmstrips in all curriculum areas is valuable and desirable and that a flexible and workable plan for the administration of such equipment can be assumed, for the most part, by the general teaching staff.

## BRILLIANT, GLARE-FREE PERFORMANCE

SPENCER

## DELINEASCOPES

NEW HIGH SPEED  
OPAQUE DELINEASCOPE

POPULAR GK DELINEA-  
SCOPE FOR 2" x 2",  
2 3/4" x 2 3/4" and 3 1/4" x 4" slides.

### SUPERIOR SCREEN PERFORMANCE

World famed quality optics assure vivid, natural color richness...needle-sharp detail. AO Spencer Delineascopes provide uniform *edge-to-edge* illumination...no "hot spots".

### EFFICIENT COOLING SYSTEMS

Skillful design protects even the most delicate color transparencies and opaque materials. Always cool enough to handle. UL and CSA electrical approvals.

### STURDY CONSTRUCTION

Rugged...light weight...all-metal construction. Precision-made mechanical parts assure complete rigidity...positive alignment of optical components.

# Pre-Taping . . . Solves Predicament

by Lexia B. Young

**P**RE-TAPING the accompaniment to songs could solve the problem of what to do about the lack of pianos in school rooms or even the lack of teachers to play them. Many schools have only one or two teachers who play the piano fairly well. In addition, many classrooms are without a piano and much of the singing is taught without the benefit of piano accompaniment.

Such were the conditions when the student nurses in our school, the School of Nursing for Affiliating Students, Municipal Contagious Disease Hospital, were invited to sing at the dedication of the new Chicago Alcoholic Treatment Center. We had no glee club or choral group of any kind because our students come to us on affiliation from other nursing schools for a period of six weeks. With a new group of students coming in every three weeks we naturally did not think it advisable to organize such a chorus. But since this is a tax-supported institution and the mayor and many civic and political leaders would be present, we had to accept the invitation and make a good showing.

No one on our staff played the piano very well. Nor did any of the students. We could do fairly well for a rehearsal but that was about all. Finally, there was no piano in the building that was to be dedicated. The students were willing to sing but they could not sing *a cappella* as they were untrained and the program was only two weeks away.

I remembered that we had a tape recorder. More important, I had just learned about tape recorders and their uses in an audio-visual education class at Chicago Teachers College and also about radio production and techniques. Tape recorders are used in radio production to record rehearsals and the

finished shows. Since the recordings are used for rebroadcasting and to show the cast its errors and weaknesses, why couldn't they also be used for providing an accompaniment? I suggested that a friend of mine, an accomplished pianist, be asked to record the songs. When the first recording was made and played back, we found that it was a beautiful piano solo, but hardly anything that the group could sing by. We decided we had to direct the piano as we would a chorus. After several tries, we finally got a recording that not only was satisfactory but was very beautiful, too.

We used this recording for rehearsals and for the dedication program. In rehearsing at the building to be dedi-

cated, we found it necessary to watch the placement of the recorder. If too far away from the group, there was such a lapse of time between the playing of the music and when the chorus heard it, that the singing was behind the accompaniment. If the recorder was close to the group, we had to watch the volume. We finally worked out the ideal distance and volume and made note of them for use the day of the performance. The tape was marked with white mending tape to show us where to start the recorder. We hid the recorder because we thought it would be fun for the audience to look for the piano. Another tape recorder was borrowed and the entire program was recorded so that we could hear how it turned out. We are still receiving compliments on our singing, which we could not have done if we had not had a piano accompaniment.

Tape recording can be done very easily in a school. I was the only one who knew anything about tape recorders and I knew only what I had learned in the audio-visual education class. This would indicate that because the average teacher can use it, the tape recorder can be very useful. Some of the reasons are:

1. They are less expensive than pianos, so a school could have several of them at less than the price of one piano and all the teachers could take turns using them.
2. One or two teachers in the school, or a friend from outside as in our case, could record the songs. All would benefit. There would be no worry about who would play the piano at the next assembly. The teachers who ordinarily would play the piano would not be overworked and their classes deprived of a teacher.

Miss Yvonne Nelder, pianist, is shown making a tape-recording of the music that will later be used by the chorus as accompaniment.

Officials and nurses are shown at the dedication ceremonies of the Chicago Alcoholic Treatment Center. The tape-recorder was hidden from view behind the broad partition in the rear. Miss Young acted as monitor when the piano recording was played and provided surprise accompaniment for the student nurses' chorus.

3. The machines are portable and can easily be removed from room to room and from floor to floor.
4. The same reels of tape can be used many times by all the teachers or a teacher may prefer to have her own personal tape. The tape is very strong, but relatively inexpensive. When the material on it is no longer needed, it can be erased and something else put on the reel in its place.
5. "Part" singing can be encouraged by having the individual parts recorded as well as the complete song. It is as easy to reverse the tape, or stop it to concentrate on one particular section of a part, as it is to stop a pianist. The additional advantage is that the recording is available when

needed and unlike the pianist does not balk at having to play the same thing so many times.

6. Recordings of musical selections from records or programs from the radio or television can be made for music appreciation, discussion, or storage for future use.

Remember when using the tape recorder, however, to (1) test the conditions under which the recorded accompaniment is to be used; (2) mark on the box holding the tape the material contained on the tape, and (3) mark either the tape or the box to show where each new piece of material begins.

I hope you have as much fun and feeling of accomplishment with your tape-recorded accompaniment as we did with ours. Try it.

"Here's the Outer Space film you ordered."

# Have you heard?

## Robert Flaherty Seminar

The Third Annual Robert Flaherty Seminar will be held August 20-29, 1957, at the Flaherty home in Dummerston near Battleboro, Vermont.

This seminar was established to bring together young film-makers, and others deeply concerned with film, to explore the nature of film and take a searching look at its future.

The pioneering work of Robert Flaherty will serve as a basis for study and discussion. In the spirit of exploration which the Flaherty films represent, invited film-makers will present their own work.

The Foundation is happy to announce that the seminar will be directed this year by *Andries Deinum*, who brings to it his experience and distinction as a teacher of film. Mr. Deinum will be advised by a committee consisting of *Erik Barnouw*, Associate Professor of Dramatic Arts, in charge of film, radio and television at Columbia University; *Dr. Jack C. Ellis*, Assistant Professor of Film at Northwestern University; *Dr. Charles A. Siepmann*, Chairman of the Depart-

ment of Communication, New York University School of Education; and *George Stoney*, Director of the Film Institute, The City College, New York.

There will be informal evening meetings with guest speakers, and with special programs of music which have been a feature of our previous seminars.

As enrolment must be limited to the accommodations available, early reservations are recommended. Application blanks will be sent on request.

The fee for the ten-day seminar — including luncheons, lectures, film showings, evening meetings, and use of the conference room and reference library — is \$75.00. Inexpensive accommodations are being arranged.

## B.I.S. Closes Non-Theatrical Film Service

British Information Services have announced the termination, for reasons of economy, of the theatrical and nontheatrical distribution in the United States of their 16mm films and 35mm filmstrips from Britain.

Films which are cleared for tele-

vision will continue to be available for booking by television stations and organizations interested in developing television programs, but no applications for the rental or sale of 16mm prints for nontheatrical use were accepted after June 30.

The nontheatrical film service of British Information Services was instituted in 1940 as a means of helping the American public to learn about the British war effort and has developed into the largest film service operated by a government in any single foreign territory.

Thousands of prints of many titles have been purchased in recent years by film libraries throughout the United States and these will continue to be available to borrowers in the areas served by these libraries. Certain films have been distributed under contract by Encyclopaedia Britannica Films, United World, Young America Films, McGraw-Hill, Coronet Instructional Films, International Film Bureau, Brandon Films and Eastern Pictures and will be obtainable from these sources during the remaining lifetime of the contracts, but the service hitherto provided from 45 Rockefeller Plaza and its branch libraries, will now close down except in so far as the commercial agencies operating the branch libraries may have purchased prints and wish to keep them in distribution.

## McGraw-Hill Acquires Young America

McGraw-Hill Book Co. has taken over the distribution of the educational films and filmstrips of Young America Films, Inc. of New York City, effective June 1.

YAF will continue to operate at the present address (18 E. 41st, NYC 17) for two or three months before integrating with McGraw-Hill at their New York headquarters. Godfrey Elliott, Fred Powney, and William Frazer will remain with the combined organization to further strengthen the operation as will other YAF personnel.

## ALA Meet at Kansas City

The Audio-Visual Committee of the American Library Association sponsored two meetings at the Annual Conference of the Association which took place in Kansas City June 23-29. The

# NOW - audio-visual education in EVERY room

## LUXOUT DRAPERIES

LuXout tight Control Draperies will add beauty and warmth to any classroom . . . plus convert it into an audio-visual projection room in seconds!

Another new LuXout Drapery feature . . . the exclusive "GREEK KEY" (Patent Pending)

The "GREEK KEY" is a special fabricated heading seam developed by LuXout Draperies that has been highly commended for its outstanding strength and durability wherever used.

LuXout tight Control Draperies are available in a wide assortment of colors and styles to complement any color scheme. Consult your LuXout Distributor or write for free color listing, samples and descriptive brochure before you select any form of light control.

Department ES  
1822 East Franklin Street  
Richmond 23, Virginia

theme of both meetings centered around the importance of organizing the library's audio-visual service so as to insure a thorough integration of the administration and use with that of other library materials. The first meeting on June 24 opened with a statement of purpose by Dr. Raynard C. Swank, Director of Libraries, Stanford University, in a talk "Sight and Sound in the World of Books." This talk was followed by a panel discussion and general audience discussion.

At the second meeting on Wednesday, June 26, discussion of the questions brought out in the previous meeting took place at small tables. The reports which came out of these small group discussions were commented upon by the members of the panel which had presented the material at the preceding session. This was followed by general discussion and questions from the audience. The meeting closed with a summary of what took place at the two sessions.

The Audio-Visual Committee was also responsible for the noon-day film showing which took place during four days of the conference from 12:00 to 2:00 in the Little Theater in the Auditorium. Miss Bertha Landers, Director, Art, Music and Film Department, Kansas City Public Library, was chairman of the committee which chose the films to be shown at these noon-day sessions.

The ALA Audio-Visual Committee also met during the conference. One of the principal items on its agenda was preliminary planning for a two-day television institute to be held in San Francisco, July 1958, in connection with the annual ALA Conference in that city. The committee also had presented to it the work of one of its subcommittees which had compiled and published a supplement to "Films in Public Libraries." The chairman of this committee was Miss Violet F. Myer, Head, Films Department, Enoch Pratt Free Library, Baltimore. This supplement and the original publication "Films in Public Libraries" is available from the American Library Association.

### Winners Named in Columbia Records' National Mozart Bicentennial Contest

Winners have been announced for Columbia Records' National Mozart Bicentennial Contest, one of the most unusual competitions ever developed for music students.

Objective of the contest was to stimulate student interest in the music of Mozart, and provide incentive for teachers to develop a creative study unit. The response was overwhelming.

During 1956-57, the year marking the 200th anniversary of Mozart's birth, eighth graders across the country were delving into encyclopedias, dictionaries and music libraries, producing scrapbooks, radio scripts and even color sound films.

First prize (100 LP records and a high fidelity phonograph equipped with headset earphones for classroom use) was awarded to ST. EDWARDS SCHOOL, Waterloo, Iowa. This ambitious group of eighth-graders filmed in color and with sound their conception of the life of Mozart. Entitled "Mozart the Wonder Boy," the film was written, produced, staged and dramatized by the youngsters themselves. Portraying Mozart in his amaz-

ing childhood, the script required a juvenile thespian to perform on the piano, organ and violin, as well as trip over the feet of a suspiciously youthful looking Austrian Emperor. In his untimely death scene, Mozart was shown frantically composing his last major work, coughing dramatically, adjusting his cotton wig and finally slumping lifelessly in his chair, his right hand remembering to drop a quill pen to the floor. The group's teacher is Sister Mary Lolita, O.S.F. Principal at St. Edwards School is Sister Mary Ione.

Second prize (75 LP records and a high fidelity phonograph) went to AKIBA JEWISH DAY SCHOOL, Chicago, Illinois for its film version of

The improved PROFESSIONAL JR. Tripod with removable head is the world standard of quality among tripods. Features simplified camera attaching method, double lens lock adjusting knobs, telescoping pan handle, sockets for left, right and reverse tilt. \$150.00 (\*Reg. U.S. Pat. Off. No. 2318910)

60-E Franklin Street, East Orange, N. J.

Mozart's life, skillfully handled with the use of flashback incidents, and ending impressively with a segment of the Mozart Requiem. Teacher-Supervisor was Abraham Buchman.

Third prize (50 LP records and a high fidelity phonograph) was awarded to ST. VINCENT DE PAUL SCHOOL, Milwaukee, Wisconsin, for their entry: a complete Mozart puppet show, as well as a scrapbook filled with research information, mobiles and wallpaper designs. Their teacher is Sister Mary Josette. Principal at ST. VINCENT DE PAUL is Sister Mary Simonetta.

Fourth prize (50 LP records) went to JACK YATES SCHOOL, Houston, Texas. The 29 students of this eighth grade class wrote and taped an original play titled "Much Ado About Mozart." Within this dramatization were performances of Mozart and arias, as well as some of his keyboard music. Teacher: Mrs. Gloria Duke. Principal at JACK YATES: William S. Holland.

Fifth prize (25 LP records) was awarded to LINCOLN JR. HIGH, Meriden, Conn. These 20th century Mozart fans chose to use the modern medium of radio, and with amazingly fine technique produced an adaptation of the famous CBS Television program YOU ARE THERE. They set up inquiring microphones at the site of the premiere performance of Mozart's DON GIOVANNI. Among the opening-night celebrities in attendance were Beethoven, who confided to the reporter that "the performance was terrible; the music was superb," Benjamin Franklin, who when asked what he thought of the work, said: ". . . better to ask me what I thought of 'Don Giovanni.' There was a man! As to the music, I have a tin ear." Their teacher is Miss P. McLaughlin. Principal at LINCOLN JR. HIGH is Mr. T. Mason Brown.

**Prize Winning Films**

"Man of ACTION," slum-fighting cartoon motion picture produced by Transfilm for the American Council To Improve Our Neighborhoods (ACTION), has won a 1957 Sponsored Film Award presented by Scholastic Teacher Magazine on May 7 at the Advertising Club of New York.

The film, which has been seen by 49,000,000 persons in community showings and on television, was sponsored by the Continental Can Company and contributed as a public service to ACTION. In addition to the latest honor, the film has received a Freedom Foundation award and a Cleveland Film Festival citation. It is distributed on free-loan through the regional libraries of Association Films.

The citation for the best film of Jewish interest produced in 1956 went to Romulus Productions at the annual conference of the National Council on Jewish Audio-Visual Materials, held on Friday, May 17, at the Herzl Institute, 250 West 57th St., New York. The prize-winning film was "The Bespoke Overcoat," a 16mm, 37-minute film starring David Kossoff and Alfie Bass, script by Wolf Mankowitz, music by Georges Auric.

Distributed by Brandon Films, Inc. It tells about a poor Jewish tailor who helps the ghost of his late friend, Fender, to take a wryly humorous revenge on his former employer by stealing an overcoat from him which he coveted for many years.

The citation for the best filmstrip of Jewish interest produced in 1956 went to the Jewish Education Committee of New York. The prize-winning filmstrip was "Albert Einstein," written by Robert Garvey, art by Robert Frankenberg, edited by Azriel Eisenberg, directed by Ezekiel Schloss — a 46-frame color filmstrip, presenting highlights of the life of Albert Einstein, world renowned scientist, great humanitarian and staunch friend of Israel.

Honorable mention went to the Commission on Jewish Education, Union of American Hebrew Congregations for the filmstrip, "Rabbi Stephen S. Wise: A Twentieth Century Prophet," a 43-frame color filmstrip, with recorded narration, written by Mel Alpern, edited by Dr. Emanuel Gammoran, illustrated by William L. Steinel and produced by Samuel Grand; Hadassah, the Women's Zionist Organization of America for the film, "I Came to Beersheba," a 28-minute color film, written by Millard Lampell, photographed by Fred Csasznik, produced and directed by Stephen L. Sharff; the Jewish Theological Seminary of America and the National Broadcasting Company for the kinescope, "Lawyer from Boston" — a 30-minute kinescope on Louis D. Brandeis, based on the NBC TV Religious Hour Program, "Frontiers of Faith"; and to the National Committee for Labor Israel for the film, "South Window," a 26-minute color film, script by Nahum Guttman, photography by J. Janilowicz, narrated by Norman Rose, produced and directed by Joel J. Briet.

Arthur Zegart, documentary film producer/director for Information Productions, New York, was honored at a luncheon at the Ambassador Hotel on Wednesday, May 1, as a co-winner of the Albert Lasker Medical Journalism Award for 1956. The award was presented for outstanding report-

ing of medical research and public health in the Television field.

Mr. Zegart's award was for "The Wassaic Story," which he directed for CBS-TV producer, Bill Leonard, who is himself a co-winner of the Lasker Award for this film.

"The Wassaic Story," written jointly by Zegart and Leonard, is a documentary film report on the New York State Hospital for the Mentally Retarded at Wassaic, New York. It was seen on the CBS-TV "Eye on New York" program on October 21 and December 8, 1956.

Arthur Zegart has been with Information Productions as producer/director of documentary films since 1952. He has produced and directed such films as "The Maine Lobstermen," written by E. B. White and seen on the "Omnibus" television show. Zegart has also written and directed some of the CBS-TV "Search" series on public affairs, notably a prison documentary filmed at San Quentin. This particular program was the first of its type ever offered to a television audience.

## People in the News

Two educational television specialists have been appointed to the staff of the Educational Television and Radio Center, rounding out the Center's program division for the coming year, Program Co-ordinator Robert B. Hudson announced.

Appointed as program associates, the new men are Edward G. Sherburne, Jr., for the past two years program director for educational station WGBH-TV in Boston, and Ray J. Stanley, project director of the University of Wisconsin television laboratory. Both appointments are for one year, with Stanley serving on a leave of absence from Wisconsin.

Before serving with WGBH-TV, Sherburne was a consultant to ETV station KETC in St. Louis and prior to that was TV co-ordinator for the Navy's Special Devices Center at Port Washington, N. Y.

Stanley has served as a program director and instructor in radio and television at the University of Nebraska, Michigan State University and the University of Wisconsin. In addition to directing Wisconsin's TV laboratory, he has produced programs for WHA-TV in Madison.

As program associates, Stanley and Sherburne will initiate program ideas and work with Center producers in the development of programs for broadcast over the network of educational TV stations.

Chicago: The Magnetic Recording Industry Association elected the fol-

lowing new officers at its annual meeting held recently at the Blackstone Hotel in Chicago: Irving Rossman, President, representing The Pentron Corp.; Arnold Hultgren, Vice-President, representing American Molded Products Co.; Herman Kornbrodt, Secretary, representing Audio Devices, Inc.; Charles Dwyer, Treasurer, representing Webcor, Inc.; Victor Machin, member of the Board of Directors, representing Shure Brothers, Inc.; and Joseph Hards, member of the Board of Directors, representing Magne-Tronics, Inc.

\*Oregon: The new officers of the Oregon Audio-Visual Association for the coming year are as follows: President—Donnell Sanders, Coos Bay; Vice-President—Larry Butler, Southern Oregon College; Secretary-Treasurer—Ben Simmons, State Dept. of Education; Past President—Milt Grassel, DVI.

C. W. Strong of Springfield has been appointed by President Sanders to act as representative at large.

We are promised by President Sanders interesting, well planned meetings in the coming year. More participation by members is expected to build this organization and include more teachers and audio-visual people who are not now members.

Dr. Ward E. Ankrum, Director, Audio-Visual Library, at Stephens College, has accepted an appointment as Associate Professor in the Division of Education and Psychology and Director of Audio-Visual Education at Henderson State Teachers College, Arka-

delphia, Arkansas. The position at Henderson will offer opportunities to teach both graduate and undergraduate courses in audio-visual education and to develop application of these materials and services in the field of teacher training. His long-range interest in professional education has been intensified through Northeastern Missouri State Teachers College, Kirksville, where he assisted in planning and supervising the Annual Audio-Visual Credit Workshop for the past four years.

He is asking your cooperation in furnishing your current catalog, brochures, descriptive folders, samples and other materials in order to achieve the following purposes: (1) to develop current files for the administration of the audio-visual program at Henderson State Teachers College, (2) to assemble course materials for graduate and undergraduate audio-visual education courses at Henderson, (3) to allow uninterrupted utilization of the files at Stephens College, and (4) to preserve the present files for his successor at Stephens. All materials sent to him for utilization at Henderson will be forwarded to his office on that campus after they have been arranged and identified according to categories applicable to the administration and audio-visual instructional programs. In order to separate and process these materials kindly send them to his residence: 7 McBaine, Columbia, Missouri.

There is an urgency related to his request as his obligations at Henderson State Teachers College commence July 1, 1957.

## PROTOZOA: ONE-CELLED ANIMALS

(Encyclopaedia Britannica Films, Inc., 1150 Wilmette Avenue, Wilmette, Illinois) 11 minutes, 16mm. sound, black and white or color, 1957. \$100.00 and \$50.00. Produced by Hal Kopel for Encyclopaedia Britannica Films, Inc. Teacher's Guide available.

### Description

This film uses cinephotomicrography to show a variety of protozoa and some of their life functions.

It opens by showing the principal photographer of the film, Dr. Vishniac, at work in his laboratory and then the teeming life in a drop of water and pictures hundreds of protozoa swimming in the eye of a needle. The ectoplasm, endoplasm, and nucleus of a cell are identified and protozoa are classified by the ways in which they move. *Amoeba* are pictured moving by pseudopodia; *Paramecium*, *Euglena*, and *Phacus*, by flagella; and *Paramecium* and *Paramecium* by cilia.

The contractile vacuoles of *Paramecium* and *Blepharisma* are shown: the former as it fills and empties. The muscle-like threads (myonemes) of *Spirostomum* and *Vorticella* are also pictured. After illustrating the engulfing of food by an *Amoeba* and the gathering of the food into vacuoles where it is digested, the film describes the expulsion of fluid wastes by the contractile vacuole and the discharge of solid wastes directly to the exterior. It next shows *Phacus* and *Euglena* as examples of protozoa possessing chlorophyll and pictures the mouth opening of *Blepharisma* into which the food is swept and the sucking of body fluids of other protozoa by *Suctorina*.

Binary fission in the ciliate, *Stylo-nychia* and conjugation in *Blepharisma* are next pictured. These follow two examples to illustrate symbiosis: protozoa which help the wood roach digest food and a *Paramecium* in which many

minute plants live. Next is seen the parasite, *Opalina*, which is found in the intestines of frogs and illustrations of parasitism by showing a typanosome similar to the one causing sleeping sickness in man.

Finally, examples of colonial organization are seen in *Pleodorina* and *Volvox* and concluding scenes present a brief summary.

### Appraisal

The interesting cinephotomicrography (mostly dark field) of this film clearly pictures a large variety of living one-celled animals which are used to illustrate effectively principles and facts concerning protozoa. The film being of particular interest and use to high school biology teachers to show that the one-celled microscopic animals have the same general characteristics as the more complex animals, i.e., they move, reproduce, obtain food, digest

it, eliminate wastes, and respond to stimuli. Also, this film will probably kindle an interest in the further study of protozoa and other microscopic organisms.

Many college instructors of general biology, zoology, and other biological science courses will also find this film educationally useful. The use of a large number of genus names may be distracting and confusing to some of the viewers; however, it does serve to emphasize the existence of a wide variety of protozoa. Also, many technical terms are used such as myonemes, pellicle, and symbiosis. In order to derive the greatest educational benefits from this film, the viewers should have some knowledge of these technical terms and the genus names before viewing it.

—George Vuke

## VOLLEYBALL TECHNIQUES FOR GIRLS

(Young America Films, Inc., 18 East 41st Street, New York 17, N. Y.) 11 minutes, 16mm. sound, black and white, 1957. \$50.00. Teacher's Guide available.

### Description

This film on the techniques of girls' volleyball is designed to help those players who have learned the basic rules of the game and are now ready to develop its techniques.

The film first introduces the skills

Pyramid Temple at Chichen Itza, Yucatan, dates back to seventh or eighth century. Built by Mayas.

of volleyball by showing the fundamentals of the overhand volley, a skill which must be mastered if the player wishes to be proficient in the game. By means of slow motion photography the correct use of the fingers is shown both in receiving and returning the ball. The same method is used to show the vigorous extension of the arms and the snapping movement of the wrists. Various drills for the perfection of these skills are demonstrated, followed by action shots of "setting up the ball," both for passing and individual play.

The overhead volley is presented and its advantages illustrated by the girls on the court and then through the use of animation the four points necessary in a well-executed overhead volley are given — receive the ball in front of the body, have elbows out and thumbs down, contact ball with tips of fingers, and use an arm and a wrist snap. Again and again good passing and correct passing position is stressed, as well as such necessities as keeping an eye on the ball at all times.

The next technique discussed is the "spike." The correct body position and the techniques of the jump are given. The use of a chair on which a player can stand and practice the arm movement of the downward drive is illustrated. Other drills are shown with groups of three girls. The teams are then called back into position and the use of the spike-turning play is demonstrated.

In logical sequence, the film shows the defense of the spike. The first defense is the use of the underhand volley with proper timing being stressed. The use of the underhand volley to recover the ball from the net is shown. This can be used to set the ball up for a teammate or for individual play. The second defense against the spike is visualized in slow motion photography by the player blocking the spike at the net with both hands. The advantages of two players using four hands to block a spike is recommended. The timing of the jump which accompanies the block is compared with the jump used in the spike.

The last concept is the "serve." The underhand serve is first shown and the three ways by which this technique can be used are demonstrated — heel of the hand, knuckles of the hand, and palm of the hand. The results of the follow-through are pictured both in actual use and by means of animation. This makes it possible to see the exact course of the ball from both the correct and incorrect follow-through.

Brief mention is made of the use of a spin and a curve in the serve and

slow motion photography makes it possible to see the effects of this procedure on the ball. The side arm serve which gives more power and control over the ball for a low serve is shown. This is followed by a demonstration of the overhead serve which is the most powerful of the three serves.

In conclusion the players take their correct positions on the court and show the use of the techniques that must be mastered not only to become a skilled player but which are necessary to promote well-organized team play. Although there is much need for individual skill, volleyball is essentially a team game.

#### Appraisal

Here is one of the better instruc-

tional films for the coaches of girls' volleyball. The use of slow motion photography is particularly helpful. The presentation of the skills is simple, direct, and complete. The use of the various drills in order to become proficient in the different skills not only gives suggestions to the coach but will overcome the common tendency of all beginners to want to play the game without the necessary detailed practice on the fundamentals. The film is technically competent and especially well organized and presented. Its use will have a wide range from junior high girls who have had experience with volleyball in grade school to the college classes for a review and the perfection of the basic techniques. The film is produced in black and

## EARLY AMERICAN CIVILIZATION (MAYAN, AZTEC, INCAN)

(Coronet Films, Coronet Building, Chicago 1, Illinois) 13 minutes, 16mm, sound, black and white or color, 1957. \$68.75 or \$125. Teacher's Guide available.

### Description

Scenes of present-day Indian life, views of the remains of ancient civilizations, animated maps, drawings, and dioramas in this film illustrate some aspects of the Mayan, Aztec, and Incan "maize" cultures which flourished between 400 B. C. and 1200 A. D.

As the narrator points out, three mighty Indian nations thrived in America centuries before Columbus discovered America. These nations depended upon corn or "maize" for much of their economic stability. In many ways these cultures produced civilizations that rank in some respects with ancient Egypt or Mesopotamia. The

Mayas settled in Central America, the Aztecs built their cities in Mexico, and the Incas established homes in the highlands of the Andes or Peru.

Earliest of these cultures were the Mayas who created their first empire in Guatemala. Later, in the seventh or eighth century, they moved into the land now called Yucatan. At their largest city, Chichen Itza, the Mayas built a great pyramid temple for religious ceremonies. A sacred well where young women were thrown as human sacrifices is shown. Food items were placed as offerings in the hollow middle of reclining statues. Pictures of the Mayan way of life of long ago are compared as being similar with the descendants of that culture today. The film illustrates how they still depend upon corn, weave on hand looms, and build simple thatched huts.

As evidence by the remains of their cities, the Toltecs, Mixtecs, and Zapotecs also created rich civilizations. They were driven out by the Aztecs about 1200 A. D. and the new conquerors built Tenochtitlan, a city of canals like Venice, as their capital. Some of the canals, lagoons, and island gardens still exist. The film shows many Aztec images in stone and gold of their corn god which contributed much to the artistic heritage of Ameri-

can culture. They developed an accurate calendar and experimented with many present-day crops, such as corn, peppers, tomatoes, and sweet potatoes.

By 1400 A. D. in the highlands of the Andes, the Incas were busily building and organizing a great empire which stretched from Quito to central Chile. Approximately 900 years after its founding, Cuzco, the capital of the empire, is still inhabited by descendants of the Incas.

The Incas built many fine roads and trained fast runners who delivered messages across the country. They wove fine cloth and made beautiful figures out of silver and pottery. The film shows some of the foundations of their buildings which were built without mortar and still stand—so tightly fitted that a knife blade cannot be pushed in the cracks.

The narrator points out that as more and more is learned about the religion of the Aztecs, the building and architectural feats of the Mayas, and the highly organized government of the Incas, the contributions of these early Indian civilizations are becoming increasingly apparent.

### Appraisal

*Early American Civilizations (Mayan, Aztec, Incan)* provide an excellent survey of the cultures of three early Indian civilizations. Much of the content compares the ancient civilization of the early American cultures with the descendants of those same civilizations and tends to serve as a motivation for continued study of today's inhabitants of those countries. It might well be used as an overview or introductory presentation to stimulate interest in further study of early American cultures. The film should be suitable on the intermediate through senior high school levels. Much of the appeal of this film may be attributed to a skilful use of live photography, animation, dioramas, and art work to depict a culture of centuries ago. Due to the fact that many of the names used are complicated it would be desirable to present more of them in written form on the maps.

—O. E. Bismeyer, Jr.

be enjoyed by P.T.A. groups or school assembly audiences. It brings to the attention of the teacher the fact that choral reading can improve class participation and that youngsters themselves will develop an appreciation for and a desire to share poetry with others. *Let's Try Choral Reading* shows teachers how students who have little talent can be given a chance to perform and to feel more at ease before a group.

One sequence in the film shows how the members of a group prepare for a choral reading and how lines are rehearsed. It suggests first that the group should choose a selection suited to their age level and one which appeals to them. Secondly, that choral reading should be a group project employing the student's own interpretations — "should the voices be high or low?" "would some lines sound better together or alone?" It further mentions the importance of pleasing tones and inflection, pronunciation, enunciation, articulation, rhythm, and the stress of words.

Several demonstrations of choral reading are given in the film. The readings used are from three unpublished poems by Margaret Carlile Travis. The final sequence is devoted to one of these entitled "Surabachi" using special lighting effects to give the poetry a dramatic staging.

### Appraisal

Although the medium of choral reading has been used rather frequently both in and out of the classroom, this production introduces for the first time on film the techniques of group speech. To the uninitiated the title of the film, *Let's Try Choral Reading*, would seem to apply to the area of music. Actually, choral reading is very much like singing since it emphasizes rhythm and voice pitch; but it is also like a drama because each one can have a part. Really, it is concerned with group recitation of the written word. Ability to sing or to act is not necessary. One might describe it as a modern approach to elocution which used to be quite the fashion in grandmother's day. The film should prove valuable to teachers and students in the areas of speech, English, and the language arts from the elementary through high school levels. It very ably demonstrates what can be done to provide students in these classes with a concrete experience and explains the values to be derived from choral reading. The film could contribute much to arouse the current lagging interest in poetry and the beauty of the spoken word.

## DOING MORE FILM BUSINESS WITH THE CHURCHES

by WILLIAM S. HOCKMAN

It was one of those Trade Show sessions. The main talk finished, the speaker got only a few questions, so adjournment was early; a very typical situation.

"How's business?" I inquired of two young men as we stood up to leave.

"Rotten!" said one and the other added, "Not so good; could be better!"

Replying that I was sorry to hear such news, I asked "What are you doing to make it better?"

Almost in unison they replied; "The usual things."

Soon the conversation revealed that they were running A-V rental libraries, serving churches and schools primarily, with equipment selling on the side.

They bristled when I commented, that for all the effort they were putting into it, I thought they were having pretty good business.

"What would you do? You seem to know so much," they shot right back at me.

Then I asked them two fundamental questions which left their jaws hanging open: "Do you know your merchandise? Do you really know your customers?"

Getting more specific, I asked, "Do you know what's in the reel can? If you don't how can you 'sell' it?"

The tall one sputtered something about, "Heavens no! I don't have time to look at all that stuff. It would take days."

Now I pressed them on the second half of that basic duet: "Do you know the churches, how they run, who runs them; do you know the ministers of the churches you'd serve?"

This brought even deeper astonishment to their faces, and the shorter one from Connecticut replied, "No, I would not know how to start on that," and the other added that he knew a few church people, mainly those that came into his place of business.

Now I let them have it point-blank: "For two business men who don't

know the stuff they sell and don't know the customers who ought to buy it, you have more business than you deserve if you have any at all."

Then the loud-speaker began to bawl something about clearing the room for a luncheon and our conversation was broken off.

### Selling A-V Materials

What's basic? I'll give you the churchman's viewpoint on what is basic, and the foundation stones of success with the church are simple and easily stated: a) you must know your 'merchandise'; b) you must know your customer and his needs; c) and, you must know how to deal with your customer. Let's look at these more in detail and see what they mean.

My fellow conferees above were not doing too badly. What other seller could ignore the basic principles? Could a grocer get far if he did not know what was in the cans? Could a farm implement concern expect much business if it did not know the farmer and his needs?

Yet, the A-V library people are often just about that dumb. I stood by the booking desk of a film rental library some time ago and found that the girl was saying "No" and "I don't know" and "I'm sorry" over and over again. No, we don't have that film; No, we don't have that film in; No, I really don't know what it is about. Can any business survive all those No's? Hardly!

Later, in a West Coast library, I saw a different performance. Here was a woman who not only knew what was in the can but she knew who was on the other end of the line! Her responses were tailored to her customer's needs, and he asked for information and advice. True enough, she did not have exactly what he asked for but she fixed him up happily with another title which would get his job done just as well. This booker knew what was in the cans, what Dr. Brown was like

and what he was trying to do with a group of young people on a Sunday night. And she sold him!

### Knowing Your Stuff

How did this operator know her films and filmstrips? I'll give you her plan of operation, boiled down: a) she read the descriptive material in the catalogues, releases and broadsides; b) she previewed the most active and important stuff herself; c) she delegated drudgery to others and kept mighty close to that telephone herself.

She not only read about the films but she filed that material so she could get at it in a hurry. She kept a record of the churches who had used material, and suggested that when a customer was in doubt about the fitness of a film, for a certain group or purpose, that he call a prior user. This, she claimed, was an excellent idea for the two would fall into a discussion of other materials and educate each other and stimulate the desire to use more material.

She went beyond reading and hearing about: She spent many mornings, when the phone might not be too busy, in the preview room. Others could attend to the routines, she had to know, she had to see what she would "sell."

"I used to have this place turned around," she said, pointing to an inner office where routine work was being done. "I used to be in there while some inexperienced girl sat out here and lost business for me, both over the phone and over the counter."

I wanted to know more about this angle and she gave it to me; it went like this: "A few years ago we thought any one could take the orders for films, and I would run the whole shebang from the back office. It took some lean years to tell us that the way this phone and this counter is handled means the difference between bad and good business."

## Know Your Customers

"Let me tell you another thing: No one ever leaves that counter without something—the film he came for, or one which would substitute for it; the filmstrip he wanted; or, a packet of literature for his file. We must render service, we will even call other libraries to help our customers find what they need."

Let me take it from here. She admitted that she could not get out on the field as she wanted to, when I brought up this angle.

There just is no substitute for knowing your customers on their home grounds. Going out to the church for a chat; going to meetings of ministers; going to conferences and institutes. Listening to church people talk can help you size them up in terms of how you must do business with them.

One library operator kept asking the ministers to come to his place to see new films. They didn't show up. He asked me what to do, complaining of them. I simply advised him to take his stuff out to them. Once a month they met as a professional group. I told him to set up out there and show a film—a late one. Then he sent a postal saying that he would be there an hour before the meeting showing

a certain film and they could see it by coming a little early.

Did they come? They certainly did! They came early and asked all sorts of questions, and they came to see. This plan killed two birds with one stone: He got his stuff seen, and he got to know the preachers.

## Know His Needs

As an illustration, take this year: The churches will be studying JAPAN and the theme CHRIST THE CHURCH AND RACE. The library operator who is on his toes will get ready to serve his churches. He will buy the new film, THE BROKEN MASK, getting prints enough to take care of his clientele. He will get YOUNGER BROTHER. The church is going to need these films so he will have them.

He will also be on the lookout for filmstrips which touch these themes.

He will tell his churches about this material. He will suggest that they book early. He will get over to them that they should use the films many times—with all the groups in the church. If there are utilization guides for these films, he will buy them and get them out to his users—for they will suggest to the church many uses for these films.

Or, take another illustration: The almost nine thousand Presbyterian Churches in the USA will this year be studying the life and times and teachings of Jesus. That's the theme for the year. The A-V library can do something about this if it is on its toes. It can tell the churches what materials it has which bear on this great curriculum theme which will run for a whole year—October to October.

The smart ones will even go one step further. They will get the general brochure which gives every course and the lesson title for every Sunday. They will study it. They will study their titles and set up a chart which gears their materials into these lessons.

And they will tell the churches, with whom they hope to do business, what they have done. This will help the churches distribute their usage of this material over the whole year.

In the case of filmstrips they will stock them early and tell the churches about them. What they will do about preview of material, with a view to buying, is a thorny matter. As a churchman, I believe in the right to see before I buy. At the same time, I know what a headache spot previews can be. But this I know, the problem can be solved.

# BFC FILMS

### **BROKEN MASK:** *Winner of the Golden Reel Award*

A forceful and dramatic story of two college students who shatter the masks of prejudice against the color of a man's skin.

16 MM. Sound Color and Black and White 28½ Min.

### **YOUNGER BROTHER:**

A moving and sensitive film story of Jiro who dares to break away from the age-old traditions of Japanese culture to become a Christian.

28½ minutes, 16 mm. sound  
Black and White — Color —

Order from your local film library.

**BROADCASTING and FILM COMMISSION**  
NATIONAL COUNCIL OF CHURCHES 220 FIFTH AVE., NEW YORK 1, N. Y.

On knowing your customer, take another angle: How many local film libraries tell potential users how some other church used material creatively and effectively? Mighty few! Too few! Yet, here is one of the very best ways to keep a film off the week-end roost! And the church whose work is told about is pleased with the publicity.

I know a dealer who asks those who return films in person how the program went. He hits pay-dirt every now and then and asks if his secretary can take down points so he can put it into a little story as a printed mailing piece.

Another library operator invested his Sunday evenings in seeing how his customers were using the films they rented. He tried to cover two in an evening by staying in the same part of town and catching the early meetings first. He went to learn; not advise. He went to get acquainted; not sell.

Seeing how some young people were using a filmstrip to spark discussion, he went back to his library and listed some others that were good for that purpose. Seeing how a group of young adults used a film as the background for a lively discussion on a current social problem, he looked over some 'boarder' films in the terms of that usage.

But, the most important thing that happened to him, was noting that the minister was NOT running everything himself. There were many groups in these churches, and each group struggled with its program problems alone, aided and advised by the minister or the Director of Education, if there was one.

This observation meant re-focusing much of his publicity. It had been beamed at the preacher, the minister. Now he made a new approach.

In a polite, and somewhat apologetic letter, he asked the ministers of the various churches to send in the names of the people who were in charge of programming for the various groups of the church. Now he had a list of several potential users in these churches. He could look over his wares (films) in terms of some of their needs and way of working.

In conclusion, knowing your customer gets down to just such practical things as these and many others. If you have time for them, your chance of increasing your business is good. If you are too busy for this work, your church business won't grow very fast.

Buying is one side of the coin; selling the other. Put another way: You don't sell unless some one buys. How

often this is forgotten by those who would sell to the church. (Space is too limited here to get into the equipment angle. It will be dealt with in a later article.)

To a degree selling should be adapted to the way the buyer wants to buy (or thinks he wants to buy).

Here is an illustration: The business secretary of my church comes to me with a bill from a film library. It simply says that we owe them so much. Could I O.K. that? Would it go by the sharp eye of a trustee without an O.K.?

"What's it for?" I asked.

"I only pay the bills, when properly approved," she said with a smile.

As it turned out, here was a statement for a film rental which should have gone direct to one of the groups of the church. But, how could it? No film title given; no utilization date; no nothing.

Three phone calls later I had sleuthed it down. Again I reminded this library that we wanted to be billed so we we could approve statements without so much bother.

Most churches operate on a budget, with certain organizations outside of this general budget and paying their own way on program items. We are just not cranky. The budget of my church is close to \$100,000.00 and twelve solid business men hold all of us accountable.

Let's take another illustration: For reasons unknown to me, a library keeps prints in circulation long after they are worn out. Splices break; the film busts; the program collapses. A little of that goes a long way! Some customers complain, but the scratched and patched prints still come through. His church business will not grow as it should and could.

Advice: In booking find out who is to be billed for the film: church, the church school, which club, which organization. Get this information on the billing statement. Also, find out *who* is booking the film. Get that name down, too. While less important in small churches, it is extremely important in the large ones, who are, after all, the heaviest users.

Again, accommodate the churches, and ask the churches to accommodate

each other. Illustration:

I phoned for a film. It was unavailable, they said. I asked where it was booked, and was told that it would be in a town 25 miles away on Friday night. I wanted it for Sunday night! Would I drive there for it? I sure would!

The library phoned the Friday night user and asked him to hold it for my pick-up Saturday morning. Result: Two rentals instead of one, with a lot of goodwill toward that alert library operator.

### Summary

What does this add up to? Three things: If you would do more business with the churches you must know your materials in the first place. Secondly, you must know your customers and their needs, and after that you must find out a good pattern of business relationship with the churches and the people who operate them. In short, commonsense with a small "s". Here's to more business!

—Wm. S. Hockman

### Cathedral's U.S.C. Workshop

Carrying out a plan to build in the churches a deeper appreciation for the power of motion pictures and filmstrips when geared to the basic goals of the church, Cathedral Films, Inc., is again this summer conducting an audio-visual workshop at the cinematography department of the University of Southern California for seminary students.

One of the best ways to reach the churches is to reach them through the young men who will some day be their ministers and already this long-range plan is bearing fruit and becoming widely appreciated. "We are seeing great results as an outcome of our workshop efforts last year, and we know we are on the right track," said Dr. James K. Friedrich. "As we expand our workshop idea, the wall of resistance against the audio-visual teaching approach in our churches will disintegrate much more rapidly," he said.

The workshop will be held daily, five days a week, beginning June 24 and continuing through August 2. Leaders will be Rev. John G. Harrell, director of religious education and acting consultant on audio-visual education to the National council of the Episcopal Church, and Dr. Robert Gerletti, coordinator of audio-visual education, Los Angeles county superintendent of schools staff.

They will cover such subjects as classroom use of audio-visual materials, research and theory in audio-visual education, evaluation of audio-visual materials, and others. Graduate credit will be given for work accomplished, it was announced.

# SOUND advice

about audio materials  
and equipment

by MAX U. BILDERSEE

COLUMBIA RECORDS, and in particular Mr. Harold Schwalbe, demonstrated for us an interesting way to make a good and practical low impedance microphone from that idle permanent magnet loudspeaker on the shelf. Such a "gizmo" (and what else would you call it?) can be very useful in recording choruses, orchestras, bands, verse-speaking choirs and other large groups.

Let's start by saying that the larger the loudspeaker cone (measured in inches as a diameter), the better your recording is likely to be insofar as cone size is a factor in loudspeaker quality. And, too, the larger the cone the wider the pick-up angle is likely to be.

Now, take a length of shielded microphone cable. The length is *not* a critical factor in quality—so—when in doubt use a little more rather than a little less. You will find a braided metal shielding inside which is a single insulated wire.

Connect (and a good, clean connection is important) the single wire (insulated) to one side of the loudspeaker terminal strip. If (and this will be true of about 80% of loudspeakers) there is a small green dot on the terminal strip, connect the insulated wire to this side because the green dot indicates the "hot" or "positive" side of the strip. Next—connect the braided shield to the "cold" or "negative" side of the strip.

Within the five feet of cable nearest the tape recorder (*and preferably within the last foot*), an output transformer must be mounted. It must match on the one side the input resistance or impedance stated in ohms of the tape recorder and on the other side the impedance, also stated in ohms, of the loudspeaker. Once the low impedance side of the transformer has been connected to the cable from the microphone you are ready to attach the high impedance side to the input of the tape recorder.

Let's take a not unlikely hypothetical case. You have a twelve inch permanent magnet loudspeaker which you wish to use as a microphone. It may be mounted in a baffle—or it may be unmounted.

You have determined (through previous knowledge, or through consultation with your local audio equipment dealer) that the impedance of the loudspeaker is eight ohms and that the input impedance of the tape recorder is 20,000 ohms. This is as bad a mismatch as trying to wear a size three galosh over a size twelve shoe! But, in electronics the mismatch can be corrected by proper use of the right transformer.

You have purchased umpteen feet of rubber covered shielded single conductor microphone cable, the correct output transformer (the primary side of which is 20,000 ohms to match the recorder input impedance and the secondary side of which is eight ohms to match the impedance of the loudspeaker). And, of course, you have purchased a plug to fit the 'mike' receptacle of the tape recorder.

You study the back of the loudspeaker to find the positive side of the terminal strip, usually indicated by a green dot. To this side you connect the insulated single wire of the microphone cable. To the other side of the terminal strip you attach the braided metal shield of the new cable.

Now you cut off not more than five feet, and preferably not more than one foot, of the microphone cable from the end which will be nearest the tape recorder. The longer piece, already attached at one end to the loudspeaker, is attached to the secondary (eight ohm) side of the output transformer. One end of the shorter cable is now attached to the primary (20,000 ohm) side of the same transformer. The other end of the short wire is attached to the plug . . . and ZOUNDS! you have a low impedance microphone for the tape

# NEW 1957 RECORDS BY HELEN PARKHURST

(From The "GROWING PAINS" SERIES)

These Records won a McCall's "GOLD MIKE" for outstanding service to youth. They focus on the Teen Ager.

ILLUMINATING — TIMELY — IMPORTANT

Every HOME, CHURCH and SCHOOL LIBRARY should own these records—they go to the heart of current social problems. EACH RECORD IN TWO PARTS—Part I, the Teen Agers Discuss the Problem. Part II, An Adult Panel Reacts to Discussion. The records are expensive because their enlightened public is still small but your investment will guarantee adult understanding of what children need. They will not supplant adult authority or invade important Teen Age privacy. They result from a two year exploration coast to coast using 100 miles of tape sampling and authenticating Teen Age opinion, revealing their conflicts and problems.

recorder — ready to go!

Mr. Schwalbe answered four specific questions for us and the questions as we phrased them and his precise answers are passed on herewith:

1. What do you do if there is no green dot on the loudspeaker?

"It is very unusual if there is not a dot on the speaker. If there is no dot, just connect each lead from the secondary of the output transformer to each lug of the speaker. If two speakers are connected in parallel and there is too little bass, just reverse the connections to one of the speakers."

2. How do I recognize the positive side of the secondary of the transformer?

"There are usually just two base leads on the secondary of the transformer. Also if checked with volt ohm meter, it will be about 3.2 ohms approximately if used in conjunction with 3.2 ohm speaker."

3. How do I recognize the positive side of the primary of the transformer?

"They usually have a red, blue lead and a third colored lead."

4. How do I recognize the positive terminal of the plug matching the receptacle of the tape recorder?

"The positive side of the terminal will have the heavier insulated lead going to it."

Mr. Lloyd W. Loring of the David Bogen Company offers sage advice in the field of acoustics and we are quoting from his letter as the final item in this series on adapting school-type tape recorders for use with low impedance microphones. He says "We suggest that the recorders consider carefully the type of hall in which the recording is to be made since this will determine to a great degree the kind of sound obtained. A large reverberant hall will tend to blend the voices but also tends to blur the speech of the singers and thus make it more difficult to under-

stand the words of a song. In a non-reverberant room, the number of microphones can be reduced and they can be placed further away from the singers. However, in a highly reverberant room it is often found advisable to use several microphones (normally one for each section of the chorus) locating them fairly close to the singers. An omni-directional microphone normally can be used successfully only in an acoustically excellent hall, and uni-directional or cardioid microphones are to be preferred when it is necessary to control reverberation."

Siobhan McKenna has been justly toasted for her performance as Joan in George Bernard Shaw's "Saint Joan." Mature high school students and college students certainly will be interested in this masterful performance recorded RCA-Victor (Camden, New Jersey) and released in album LOC-6133. This original cast performance of the Cambridge Drama Festival Production was made shortly after the opening of "Saint Joan" at the Phoenix Theatre, New York, following successful performances at the Sanders Theatre, Boston and at the Playhouse in the Park, Philadelphia.

Regardless of whether the recordings are used in classroom instruction, they are a worthy addition to the recorded literature collection in any library and particularly in school and college libraries. Certainly the listening student will profit from reading Shaw's exhaustive research and study on the subject of the play before listening to the recording. Indeed, the recording adds a new dimension to the reading, and it is well to have the play in hand to be read as the characters deliver their lines. In all, it is a most worthwhile and enchanting listening experience.

Miss McKenna's sensitive portrayal of the inner turmoil of Joan of Arc is a delight to the ear. So, too, are the presentation of the supporting roles played by such experienced actors as Ian Kieth (Peter Cauchon), Earle Hyman (Dunois), Frederic Tozere (Archbishop of Rheims) Bryany Halliday (Earl of Warwick) and the others including Michael Wager, Thayer David, Earl Montgomery, Dick Moore and Dennis Patrick.

Miss McKenna's close familiarity with the play and the character she portrays is based on her having enjoyed stunning successes as The Maid in Dublin and London. At An Taibhdearc in Galway she portrayed Saint Joan in her own Gaelic translation. The crisp, clear, Irish intonations and delivery are characteristic of the magnificence of her performance. Few students have the opportunity of seeing

a play such as this produced with the consummate skill of artists in New York, but few need miss the opportunity of the vicarious experience of enjoying it through these RCA-Victor recordings.

A new dimension in sound recording is attempted and approached in **THE NIGHT OF THE HUNTER** (RCA-Victor, Camden, New Jersey—LPM 1136). This is story telling in an advanced form with musical background and interludes designed specifically to enhance the impact of the events depicted through the music and through the medium of Charles Laughton's superb delivery. Davis Grubb's story was adapted for motion picture presentation and Walter Schumann created the brilliantly haunting and original musical score which is the backbone of this recording. The two principal themes of the river and little children stand out strongly in this harrowing tale of escape and pursuit, of innocence pitted against savage brutality. Charles Laughton, as the narrator, adds to his laurels as the first storyteller of our generation. High school students and other adults can profit not only aesthetically from hearing this recording, but also practically as a new technique of communications is unleashed for aural consumption. This is the art of the storyteller, combined dramatically and effectively with that of the musician striking at and holding the interest and attention of the listener.

High school groups should be aware of David Allen's reading of "When Lilacs Last in the Dooryard Bloomed" and other poems from "LEAVES OF GRASS" by Walt Whitman. This recording (Poetry Records, 475 Fifth Avenue, New York 17-PR 300) includes in addition to the poem already mentioned other examples of Walt Whitman's art including "One's Self I Sing," "I Hear America Singing," "Poets to Come," "Out of the Cradle Endlessly Rocking," "When I Heard the Learned Astronomer," excerpts from "Song of Myself," "The Last Invocation," "Goodbye, My Fancy," "Hushed Be the Camps Today" and "Vigil Strange I Kept on the Field One Night."

David Allen has been attracting considerable attention with the sound of good poetry and has been heard on a number of radio stations with his readings. His delivery is not overly dramatic but rather he plays down the emphasis on voice and performance to highlight the beauty of the lines. He renews the demonstration that written poetry, magnificent as it may be, must be heard to be truly appreciated.

Many teachers are using these albums in classrooms and also recommending them for home study. Each ZODIAC album includes 3 unbreakable hi-fi 33½ rpm LP records, together with the text and translation, delightfully illustrated.

## ARCTIC WILDERNESS SERIES

Encyclopaedia Britannica Films, Inc., 1144 Wilmette Avenue, Wilmette, Illinois. Strips are composed of color photographs. Grade range includes middle grades. Reading level of text is about fourth grade. Subject area is natural science. Strips are based on Walt Disney's production of "The Arctic Wilderness."

**ARCTIC FOXES AND WOLVES** (47 Frames). The filmstrip was very easy to understand and follow. The text and pictures proved to be interesting and with explanation the text could be understood by the primary grades. The vivid coloring and excellent photography appealed to middle and upper grades as well. The filmstrip tells the story of the Arctic wolves' and foxes' life at the beginning of the mating season, through the summer, and until the parting of the family at the beginning of winter. Questions and a summary concluded the filmstrip.

**THE NORTHLAND** (48 Frames). The filmstrip describes in brilliant color the three regions of the Northland: the Polar ice cap, the tundra, and the Subarctic. These regions are presented in terms of their differences in appearance, climate and types of plant and animal life to be found. Some unusual plants and animals such as the cinquefoil, the lemming, and the ptarmigan are shown. Good examples of protective coloring in animals is also to be seen.

The material is well presented. A few terms needed explanation to the fourth graders. However, they were very interested and retained the information. The summary and questions at the end were very helpful.

## HANS CHRISTIAN ANDERSON SERIES

Encyclopaedia Britannica Films, Inc., 1144 Wilmette Avenue, Wilmette, Illinois. Strips are in color. Grade range — fifth to eighth grades. Reading level — intermediate grades. Subject area is language arts. Each strip tells one Hans Christian Anderson story in text and picture form.

**THE LITTLE MERMAID** (48 Frames).

**THE TINDER BOX** (45 Frames).

**HANS CLODHOPPER** (36 Frames).

**THE SHEPHERDESS AND THE CHIMNEYSWEEP** (30 Frames).

These are colored filmstrip versions of four of Hans Christian Anderson's tales. The story in each case is presented first in text frames and then followed by a series of pictures. These pictures are unique in that they are constructed from pieces of cloth.

The story is to be read aloud using the text. The picture frames are then shown and the students are to re-tell the story. A discussion of the story follows and 'something to do' activities are suggested which includes making pictures from cloth, plays, etc.

While the stories are good the pictures could be better. In places they do not follow the continuity of the story, both in color and object. The colors, in many cases, have a tendency to be shallow and washed out. Greater contrast between the subjects and background would have been more effective.

For the most part the stories were enjoyed by the children viewing them. The plan of having the pictures without the story allows the children to participate in telling the story from the pictures. It not only tests the child's reading but his comprehension and observation. The pictures made from cloth interested them (although their feelings were in accordance with the above mentioned complaint), and they enjoyed using them to re-tell the story.

## OUTLINES OF NATURAL SCIENCE SERIES

Long FilmSlide Service, El Cerrito, California, Strips are color pictures, drawings, and photomicrographs. Grade range—ninth to twelfth grade. Subject area is biological science. Films are constructed to be used for introductory presentations.

**INTRODUCING BIOLOGY** (26 Frames). Through use of animated pictures at the beginning of the strip, the meaning of the word biology is explained. Color pictures illustrate living and nonliving things. Included is a discussion of the use of the microscope and other essential items needed in the study of biology. Strip also tells

Following are the qualifications for officers with the U. S. Information Agency:

**Public Affairs Officers:** Must be able to develop and direct public affairs programs abroad. They should be persons with broad executive ability and interest in cultural and informational activities. They must be sensitive to political and economic conditions, be able to work out budgets, meet important officials, etc. Public Affairs Officers are chiefs of USIS missions and as such senior to the Cultural and Information Officers whose work they supervise.

**Cultural Officers:** Must have worked effectively as writers, artists, scholars, etc. They should have well-rounded experience including, ideally, travel, residence, or study abroad. Those with special knowledge of the culture of a particular area and ability to speak a foreign language will be preferred.

**Information Officer:** Must have experience in one or more of the media of public communications (press, radio, motion pictures, etc.). They must be able to write clearly and persuasively and to deal tactfully and understandingly with people. Journalists,

radio and TV executives, writers, and those who have done work either technically or administratively with motion pictures will be eligible.

**Bi-national Center Officers:** Salaries range from \$5715 to \$10,700 a year depending on the grades of appointments. In addition are allowances and, in some posts, differentials that make the totals considerably higher than the base pay. Usually serves on a contract basis for a minimum of two years. Directors should have many of the same qualifications as Public Affairs Officer candidates. In addition they should be interested in community projects. Directors of courses must have experience in teaching English as a second language.

### General Requirements:

(1) Applicants must be between the approximate ages of 31 and 55.

(2) Applicants must be American citizens.

(3) Applicants must be willing to accept assignment to any foreign post.

(4) Applicants must pass a rigid physical examination based on Army and Navy standards, since candidates may be required to serve under extremely difficult living conditions and

at posts where medical facilities are not always available.

(5) A satisfactory loyalty and suitability investigation must be completed before any person may enter on duty.

Salary: Salaries range from \$5715 to \$8270 or higher in exceptional cases.

*Allowances While on Foreign Duty:*

At posts where government housing is not provided, allowances are paid to cover the costs of rent, heat, light, fuel, gas and electricity. In addition there is a variable allowance to adjust for living costs at posts where the cost of living has been determined to be in excess of that prevailing in Washington, D. C. Personnel assigned to differential posts, i.e., those posts where there are difficult living conditions, excessive hardships, or notably unhealthful surroundings will receive a salary differential varying from 10 percent to 25 percent.

*Travel Expense:* Travel expenses from residence to post abroad will be borne by the Federal Government. This also covers first class rail or plane transportation to Washington for a period of training prior to proceeding to the overseas post of assignment. Arrangements for overseas travel are made after arrival in Washington.

*Tour of Duty:* Employees must serve a continuous period of two years abroad before return to the U. S. is authorized at government expense. If a member of the Agency resigns prior to the completion of two years' service, transportation expenses for return to the United States are not paid by the Agency. After an employee has served from two to three years overseas, de-

pending upon the living conditions at the post of assignment, he is entitled to home leave in the United States at government expense.

*Leave:* Annual leave is earned at the rate of 13 days each year for employees with less than three years of government service; 20 days for three but less than fifteen years' service; 26 days for fifteen or more years of service. In addition, home leave is earned on the basis of one week for every four months of service abroad, or three weeks for each calendar year. All leave is calculated on the basis of working days, with military service included in years of government service. Travel time from post to the home of the employee is not charged to leave. Annual leave may be used at the post, but home leave is for use exclusively in the United States. Employees with no prior federal service are not granted leave with pay during the first 90 days of employment. Sick leave is earned at the rate of 13 days per calendar year. Unused sick leave accumulates and is available for use in succeeding years.

*Training:* The Agency's Training Branch provides general orientation and intensive pre-departure training for all new employees. This training covers Agency objectives, policies, programs and techniques, background material on the country of assignment, and foreign languages when necessary. Each employee's training is individually designed to meet his particular requirements.

*Periodic Salary Increases:* All employees with satisfactory service records receive annual salary increases.

*Promotion:* Promotion is based on merit. An employee, upon demonstration of ability to assume duties of greater responsibility, may be promoted to a higher salary class in accordance with established regulations.

*Hospitalization:* An international hospitalization plan providing full benefits while overseas as well as in the United States is available for overseas employees, at their expense. Family medical expenses and hospitalization are provided at government expense for most illnesses incurred in line of duty.

*Retirement:* All employees on regular Foreign Service appointments are covered by the Civil Service Retirement System.

For further information write to: U. S. Information Agency, Recruitment Source Development Group, Room 652, Walker-Johnson Building, 1734 New York Avenue, N.W., Washington 25, D. C.

**LATE NAVA CONVENTION  
FLASH**

**U. S. Office of Education  
To Sponsor Conferences**

Two separate groups of leaders in American education have been summoned to a special double-session conference at the 1957 National Audio-Visual Convention by the U.S. Office of Education.

All state and territorial superintendents of instruction have been asked to come or have a representative attend a conference set for July 20, and selected superintendents of schools in 38 leading American cities have been summoned to a second conference on July 22.

Purpose of the first session will be to reveal for the first time the results of the U.S. Office of Education survey and analysis of audio-visual education in State departments of education. The second conference will plan with Office of Education leaders for a second survey-analysis of audio-visual education in large city school systems, to be carried out shortly.

Both conferences have been scheduled during the Convention because many of the leaders of education who will attend the conferences will also be in attendance at the Convention, according to the Office of Education letters of invitation.

## 6 BIG REASONS WHY CURRICULUM CONTINUES TO GROW AND IS APPROVED BY MORE AND MORE EDUCATORS

- 1** Teacher utilization aids with new releases and revisions (built-in)
- 2** Over 600 Picture Powered Filmstrip Lessons in Full-Color
- 3** All filmstrip lessons correlated by Grades (from 1st thru 3rd) and by Subjects (4th thru 12th Grades).
- 4** Teacher's Guides To Utilization (in all subject areas) available.
- 5** "Filmstrip Lesson Workshops" presented to any school requesting.
- 6** 50c Replacement Policy — simply return damaged strip and fifty cents — immediate replacement will be made regardless of cause. Revisions available for only \$1.25 each.

★ Over 5,000,000 Curriculum Filmstrip Lessons now in use. More Curriculum Picture-Powered Filmstrip Lessons have been selected and approved for purchase from more State, County & City instructional funds than any others on the market . . .

★ Individual strips only \$3.95 each. In sets (3 or more) \$3.00 each. Special bonuses for quantity users.

★ Complete catalogs and preview sets sent upon request.

Some territories are available for the wide-awake dealer looking for an "exclusive line" — Four conveniently located regional warehouses make 24 hour shipment possible and eliminate necessity for large inventory.

a skillful interpretation of a great historical figure. . .

# The Boyhood of George Washington

a new Coronet film for American history

This re-creation of Washington's life from age 8 through late youth will give pupils an excellent understanding of the background that influenced him and the character traits which were part of his development.

We see how the experiences of these formative years created the high standards of conduct which fitted him so eminently for the leadership of a new nation. The producers have given considerable attention to details in the film—shooting on actual locations of Washington's boyhood, employing many properties that were used by him, and casting and costuming the actors under the supervision of leading authorities on Washington. This one reel film, available in full, natural color or in black-and-white, is truly a rich educational experience for grades 3-6.

## Other new Coronet films in color:

### English Literature: Chaucer and the Medieval Period

(1¼ reels, 13½ min.)

This film illustrates the major literary contributions of the period and provides a background for an understanding of medieval society. Re-enactments of a Robin Hood ballad, Piers Plowman, Sir Gawain and the Green Knight, and Morte d'Arthur, as well as a portion of The Canterbury Tales, enrich this study.

### How Living Things Change (1 reel, 11 min.)

While man is able to effect changes in plants and animals, living things have been changing slowly for millions of years. The evolutionary theories of Lamarck, Darwin, and deVries—which endeavor to explain these changes—are illustrated and compared.

### Bushy, the Squirrel: Background for Reading and Expression

(1 reel, 11 min.)

When Stevie spies a squirrel with a long, bushy tail he follows it into the woods. His discoveries there, how he finally makes friends with Bushy, and the things he learns will stimulate children in the primary grades to read and tell stories about squirrels.

### The Philippines: Gateway to the Far East (1 reel, 11 min.)

A geography film for the intermediate grades, The Philippines: Gateway to the Far East shows the past history, present activities, and direction of future growth of this island nation. Scenes of farm and city life show a wealth of raw materials, expanding production, and increased education in a young republic which has many interests similar to those in the United States of America.

### Life of a Philippine Family (1 reel, 11 min.)

Pupils in the intermediate grades watch the daily life of a family as seen through the eyes of the father—his work in the rice fields, the children's chores, their school experiences, games, and a birthday celebration. All provide excellent illustrations of meeting the needs of a Philippine farm family.

Each of these films is available in color or in black-and-white.

# LESS LIGHT COMES IN! LESS MONEY GOES OUT!

...when you turn a classroom into a dark auditorium...the Flexalum way!

**Principal** finds school facilities are used more efficiently when Flexalum A-V Blinds are installed. There's no need to tie up the auditorium for small groups. Instruction by projection can be going on in different classrooms at one time. Everything seems to run so much smoother.

**Teachers** can give Audio-Video instructions whenever they like. Flexalum A-V Blinds' greater number of slats, special tape construction, along with light-trap channels give much tighter closure. It's easy to turn any classroom into a dark auditorium at the flick of a cord.

**Purchasing Agent** makes a sound investment within the budget because Flexalum A-V Blinds are less expensive and longer-lasting than any combination of blackout and conventional window coverings. Superior Flexalum materials and design guarantee years of trouble-free service.

A complete range of light control from full daylight without glare... to darkness for opaque projection.

FOR SKYLIGHTS, TOO—a special modification of the Flexalum A-V Blind is ideal.

*Flexalum*<sup>®</sup>

## COVER: The French Revolution

This month's colorful cover study is a scene from the "spectacular" film THE FRENCH REVOLUTION recently released by CORONET. It is one of a number of 16mm sound motion pictures which will present accurate teaching material within the framework of outstanding film production. According to Mr. Ellsworth C. Dent, Director of Distribution for CORONET Films, the company will release more than six of these "educational spectaculars" within the next year. He states that even though the typical classroom film differs from theatrical and television films in its purpose, certain types of educational subjects are frequently compared with other films from the standpoint of interest and treatment. School pupils have been exposed to such a variety of motion pictures that their judgment of all films has become more critical. This means that teachers cannot assume pupil interest in a film just because it IS a film. With these "spectaculars" the student's attention can be more easily concentrated on the subject matter, "by stimulating initial interest, these films will assure a breakthrough of the subject and make teaching even more effective."

The French Revolution was filmed in France during the last two years and takes high school students into the very center of the breath-taking affairs of that turbulent time.

The first print in color of "The French Revolution" was received on behalf of the French Government by M. Maurice Galy of the Office of the Cultural Counselor to the French Embassy at the film's world premiere showing in New York on May 23.

The presentation was made by Jack Abraham, Vice President of Coronet Films, at the Coronet Preview Theatre.

M. Galy indicated that the film was "one of the finest he has seen on the French Revolution . . . its color, clarity and interpretation were excellent." He expressed the hope that "all of the people in America see this outstanding film."

Much of the interest caused by this showing of "The French Revolution" grows out of the dramatic effect it is expected to have on the future production of all educational films, for it sets a standard worth imitating throughout the entire field of motion pictures. It is the thirty-fifth in Coronet Films' famous World History Series.

### Watch For The October Issue

and the especially enlightening article by Philip Lewis, titled "Closed-Circuit Roundup." It promises for all an inside view of this phase of TV.

### Convention Carryover

We can't let the subject of the National Audio-Visual Association Convention that took place here in Chicago in July, become a part of past-history until we have given our readers one last glimpse of some of the activity that went on there. So we have gathered together a lot of pictures of people, and things, and happenings and centered them on pages 426 and 427, to refresh the memories of those fortunate who attended the convention and further enlighten those who could not. If fortune favors us, we will see many of our readers again next year when the 1958 Convention takes place, right here in Chicago. It was very good to meet so many of you this year.

GM

# Have you heard?

## People in the News

CHICAGO, ILL.: Ellsworth C. Dent, Director of Distribution for Coronet Films, was recently appointed Vice-President of Esquire, Inc., parent organization of the film division. Mr. Dent has been a pioneering leader in the audio-visual field for 34 years. He has served as Director of the Bureau of Audio-Visual Instruction at the University of Kansas, where the first 16mm rental library of educational films was established. In 1933, he started the Audio-Visual Services at the Brigham Young University in Utah. He has worked as Director of the Division of Motion Pictures in the Department of the Interior, as Educational Director of the Radio Corporation of America, and, prior to his joining Coronet Films in 1946, as General Manager of the Society of Visual Education.

A life member of the NEA, Mr. Dent also takes an active part in NAVA, DAVI, and the American Association of School Administrators, where he serves as a director of the Exhibitors' Association.

Ellsworth C. Dent, V. P. of Esquire, Inc. and AV pioneer.

PLAINVILLE, CONNECTICUT: At the 21st annual meeting of Victor Animatograph Corporation and its distributors, Morris Schwartz, president of The Kalart Company, of which Victor is a division, announced that Sam Rose, who with Alexander Victor founded the Victor Animatograph Corporation in 1910, has been appointed Chairman of the Board of Victor.

At the same time, it was announced that Hy Schwartz, vice president, had been appointed President of Victor.

Morris Schwartz (left), Sam Rose (center), Hy Schwartz (right).

Recent official presentation of the very first 16mm sound motion picture projector manufactured in the State of Connecticut, was made by the Kalart Company, Inc., Plainville, nationally known producer of photographic equipment.

Receiving the new Victor projector for Plainville High School were Mr. Ivan B. Wood, principal, Mr. Anthony Pupillo, Superintendent of Schools and Mr. Joseph Edmon, Plainville's First Selectman. Also attending was Dr. Edwin Thorne, West Hartford Superintendent of Schools.

The presentation was the highlight of a field trip to the Kalart plant made by the Connecticut Association of City Directors of Audio-Visual Education, as part of their final meeting of the school year.

EAST LANSING, MICH.: Walter B. Emery will begin his duties in September as visiting professor in the College of Communication Arts at Michigan State University. He received his LL.B. degree from the University of Oklahoma in 1934 and his Ph.D. from the University of Wisconsin in 1939. Thereafter, he taught at both universities as well as Ohio State. In 1943 he began work at the Federal Communications Division and from then until 1952 he served successively at attorney, examiner, division chief, and as legal assistant to the Chairman.

### UNIVERSITY OF KANSAS. . . .

Gale R. Adkins, formerly director of the Bureau of Research in Education by Radio-Television at the University of Texas, has been appointed

to the faculty of the University of Kansas. Professor Adkins will head radio-television research activities at the University of Kansas and will teach courses in broadcasting. He will be engaged in the investigation of methods by which the University of Kansas might utilize television in on-campus and off-campus teaching.

ONTARIO, CANADA: The International Film Bureau has announced the opening of its first Canadian branch office, September 15th, at 19 Fairmont Ave., Ottawa, Ontario.

The Canadian office will carry a complete preview library of IFB films, and will also have available preview prints of all educational films produced by Pat Dowling Pictures and Murl Deusing Film Productions.

The sale of the FOSTER REWIND will be launched in Canada through this office. This two-way power, film rewind for 16mm films was first introduced to the American market at the NAVA Conference in 1956, and has been received with enthusiasm by film libraries throughout the United States.

IFB was first organized in 1936 as a distributor and producer of films for schools, universities, public libraries, health and welfare departments, industry and many others. The organization represents some 35 producers in the United States and abroad, in addition to distributing its own films.

Miss Margery Weiss, Educational Director in the Chicago office of International Film Bureau for a number of years, has been appointed Manager of the new Canadian office at Ottawa.

MOOREHEAD, MINN.: Walter L. Brown has resigned at East Texas State College to accept a position at Minnesota State College, Moorhead, Minn.

# LEVOLOR SKYLIGHT BLINDS ELIMINATE DANGLING CORDS

**STANDARD SCHOOL WINDOW POLE CONTROLS TILT IN EITHER DIRECTION**

There are many advantages in having a skylight dome on your school to allow a natural entrance of sunlight. One disadvantage, however, has been annoying, dangling cords.

Levolor Skylight Venetian Blinds enable the instructor to change the room from maximum light to a soft diffused light—or optimum darkness—in a matter of seconds *with a simple twist of a window pole*. Installed to Levolor specifications, these blinds will sustain better than 200 pounds.

Another method of controlling overhead daylight is by installing *motorized* Levolor Skylight Venetian Blinds with push-button control. This is undoubtedly the most desirable method for Audio-Visual purposes.

For full details and specifications of the Levolor Skylight Blind, window pole control or motorized, write to LEVOLOR LORENTZEN, INC., A.V. DEPT., 720 Monroe St., Hoboken, N. J.

Be sure to specify

# LEVOLOR

*The Scientifically Developed Audio-Visual Blind*

COPYRIGHT: LEVOLOR LORENTZEN, INC.

He will be in charge of the Audio-Visual program. Mr. Brown received his doctorate in audio-visual education at Indiana University, and while at East Texas he served as director of the cooperative film library and also developed a production program for the audio-visual department.

**HIGHLAND PARK, MICH.:** Floyd E. Brooker, executive secretary of the Dept. of A-V Instruction of N.E.A., and one of the leading statesmen of the a-v field, has resigned from that position to assume the duties of executive secretary of the Michigan Association of Osteopathic Physicians and Surgeons, in Highland Park, Mich. One of the pioneers of the field, Floyd will be greatly missed in all the im-

portant connections he has made throughout the a-v world. He has taken a leading part in the work of the A-V Commission on Public Information during his last two years in the DAVI post. He left his DAVI post on July 2nd and as yet, his successor has not been chosen.

**MADISON, WIS.:** Prof. Walter A. Wittich, who was director of the University of Wisconsin Bureau of Audio-Visual Instruction since 1944, will become professor of education on a full time basis. Prof. Wittich received his Ph.D. at the UW in 1944 and has served jointly as director of BAVI and professor of education since then. In his new post, he will conduct both in-service and on-campus teacher

training in audio-visual education.

Prof. Frederick A. White, who served as assistant director of BAVI since 1952, will assume full time duties as director under the new UW budget. Under the new regime, Mr. White will become director of one of the largest educational film distributing agencies in the world. The BAVI film library today contains more than 5,000 titles with more than 11,000 prints.

**CHICAGO, ILL.:** W. A. (Wally) Moen will conduct a fall and winter promotional campaign for National Rental and Projection Service, Inc. (3518 W. Devon Ave., Chicago 45, Ill.). This organization, composed of audio-visual dealers in 50 cities, specializes in local, regional and nation-wide equipment rental, projection and showmanship services.

**FORT COLLINS:** J. Aubrey Smith, visual education specialist at the University of Georgia's College of Agriculture, Athens, received the Farm Film Foundation Professional Improvement Award for 1957. The award, \$500 and a framed certificate, was presented by Mr. and Mrs. C. Dana Bennett of Washington, D. C., representing the Farm Film Foundation, whose headquarters are in the nation's capital.

The presentation was made at the conclusion of the 1957 convention of the American Association of Agricultural College Editors on the Colorado State University campus at Fort Collins.

Two other agricultural college editors received certificates of honorable mention and checks for \$25. They are David Bateman, associate agricultural editor of North Dakota Agricultural College, Fargo; and Robert P. Worrall, extension television editor of Michigan State University, East Lansing.

**CHICAGO, ILL.:** Paul H. Krefl was recently promoted to Manager of the Professional Photographic Sales Division of Comco Corporation, according to an announcement made by Mr. S. J. Zagel, President.

In his new post as head of the newly formed division, Mr. Krefl will supervise national sales of Comco Professional Reels and Cans to film producers, laboratories, libraries, U. S. Government Agencies, projection equipment manufacturers and distribution to the audio-visual dealers.

### UFPA Meets In Michigan

The eleventh Annual Conference of the University Film Producers Association convened at Wayne State University, Detroit, Michigan, August 19-23, 1957. It was a highly inspiring and entertaining event. Rather out of the ordinary was a service offered wives who wished to be free to attend ses-

**First and finest of  
all glass beaded  
projection screen  
surfaces!**

**Originated by Da-Lite! Whiter . . . brighter  
Guaranteed to stay whiter, brighter, longer!**

New and tricky screen surfaces have come and gone but nothing has come close to the brilliance and durability of the Da-Lite White-Magic glass beaded screen surface. We also have the mat whites in every size and style required by the amateur, professional, theatre, audio visual, schools, churches and every industrial audio projection use. Da-Lite was first to make a practical projection screen and is first today with the finest that science, design and engineering can develop.

**Da-Lite Model B®** The screen just made for the recreation room—classrooms—church or meeting rooms. Brackets permit hanging from wall or ceiling and yet so lightweight even the largest size can be moved from spot to spot with ease. New mildew and flame resistant White-Magic Glass Beaded fabric assures real-life reproduction of your favorite slides and movies.

**Da-Lite Hilo**—Most popular A-V "Push-button" screen. Can be set from 14" to 48" above the floor, or hung from wall or ceiling. Has White-Magic glass beaded mildew and flame-resistant fabric and opens with just a touch.

There's a complete line of new Da-Lite projection screens to fit every purse and purpose . . . for homes, schools, churches, theatres or industry . . . priced as low as \$3.50. Insist on **DA-LITE**—your best buy in quality projection screens.

**Da-lite Screen Co., Inc. Warsaw, Ind.**

# F & B FILM REPAIR & SPLICING BLOCK

**DON'T DISCARD  
DAMAGED  
SLIDEFILMS**

**REPAIR TORN AND  
DAMAGED 16MM  
SOUND FILMS**

**MY MAGIC MYLAR-  
REPAIRED FILMS  
PASS THROUGH THE  
PROJECTOR EASILY**

Only \$19.95  
SAVE YOUR TORN, BADLY DAMAGED,  
GOUGED Slidefilms and movie films. Re-  
place torn and missing sprocket holes. They  
can now be repaired speedily, efficiently,  
economically and PERMANENTLY—by using  
the F&B Film Repair and Splicing Block in  
conjunction with the Magic Mylar Trans-  
parent Splicing Tape.

**I ORDERED 30 BRAND-  
NEW SLIDE FILM  
SUBJECTS INSTEAD  
OF THE USUAL 20 NEW  
SUBJECTS AND TEN  
REPLACEMENTS FOR  
DAMAGED ONES.**

Here's how bad tears, and missing perforations can be repaired.  
The F&B Film Repair and Splicing Block provides a solid base registration of the sprocket holes so that the Mylar Splicing tape can be applied accurately on both sides of the film.

**I REPAIRED UNUSABLE  
SLIDE FILMS AT A COST  
OF 12¢ WORTH OF MAGIC-  
MYLAR**

Also, the block is used for strengthening conventional lap splices—and to make butt splices. The upper channel comprises a complete splicing block for 1/4" magnetic recording tape. The F&B Film Repair and Splicing Block is made of precision milled anodized aluminum. The block is completely non-magnetic. Magnetic—or mognostriped film may be repaired in perfect safety. For schools, colleges, industry, government, film and slidefilm libraries, projection rooms for all users of film—the F&B Film Repair and Splicing Block is a prime necessity, made available by mass production at the unusually low price of \$19.95.

**THE FBFRSB IS A  
BLESSING TO US.  
WE SAVED OVER \$200.  
WORTH OF FILM WHICH  
WOULD HAVE BEEN  
DESTROYED.**

sions with their husbands, or just gad with the gals: a tot-lot or nursery for children over two years old, presided over by the University Nursery School staff. This might be a hint for other convention planners in the future.

### Operation Shoestring

A closed-circuit television network costing less than \$3000 has been successfully employed during the past four months at Euclid Elementary School in Schenectady, New York, to enrich the regular school program.

Bernard F. Haake, Assistant to the Superintendent of Schools in Schenectady, explained how the name "Operation Shoestring" was assigned to the project. "Our past experience with closed-circuit television convinced us

that any school could have such facilities for a very reasonable figure, and yet many of the school people we talked with were afraid to tackle a closed-circuit program because they thought it meant an investment of from \$20,000 to \$40,000. We wanted to show that a school could install a TV system for as little as \$3000. Once teachers get their hands on the equipment, they can show the administrators numerous ways of using television to enrich and expand the school curriculum."

### Film Competition At World's Fair in Brussels

The Commissariat General of the Belgian Government for the Brussels World's Fair of 1958 has announced

that in conjunction with the Fair, an International Experimental Film Competition is to be held, in order to encourage free artistic creation, the spirit of research and pioneering effort. All independent film-makers throughout the world are invited to enter this grand Experimental Film competition.

The Brussels Fair, which will be held April 21-27, 1958, will be the first World's Fair to be held since before World War II, with 45 nations participating and an expected attendance of 35,000,000 visitors.

According to the information, this competition will be open to "experimental or avant-garde films" as well as "essays in film, poetry and abstract compositions; all original creations which fall outside the familiar pattern of commercial film entertainment."

The competition will award two Grand Prizes (\$10,000 and \$5,000 respectively), and six other prizes.

There will be a Selection Jury and a Competition Jury in Brussels which will consider all entries and choose those which are to take part in the competition.

### E. T. Projects

Five new series of live national television programs will be broadcast over the nation's educational TV network this fall as part of the joint project undertaken by the Educational Television and Radio Center and NBC.

One of the series will center around the International Geophysical Year. Three of the others will be in the areas of American resources, current affairs for young people and the creative arts.

The IGY series will cover activities now going on in connection with the scientific year. Programs in the current affairs will explore the executive branch of government and will come from Washington. The American resources series will show how natural resources condition ways of life. Format of the creative arts series has not been determined.

Each of the series will include ten programs over a ten-week period. They will be presented each weekday night from 6:00 to 6:30 p.m. Eastern Standard Time, beginning October 29.

TV viewers in at least 23 communities around the country this fall will be able to tune in French language lessons which originated in Boston. The Educational Television and Radio Center will begin distributing "French Through Television" to its affiliated stations beginning September 8.

The series of 48 kinescoped programs — which were aired live earlier this year — over educational station

## Scratches on Film Irritate Audiences

Scratches are havens for dirt, and refract light improperly. On the screen, they mar the picture and may distract attention. If on the sound track, they produce offensive crackling.

Fortunately, scratches can almost always be removed — without loss of light, density, color quality, sound quality, or sharpness.

### Oscar Neu Dies

We regret to announce the death of Oscar Neu, veteran head of Neu-made Products Corp., on August 27th. For more than a half century, Mr. Neu was a beloved and constructively active leader in both the theatrical and nontheatrical supply industries. His vitality and energy were always an inspiration and joy to the many thousands who knew him, and his loss will be keenly felt.

### U. S. Office of Education Surveys State - Metropolitan A-V Status

Two surveys on the current status of audio-visual administration and utilization on state and large-city levels were discussed at the National Audio-Visual Convention in Chicago. Secrley Reid, representing the U.S.O.E., met with chief state AV officers of 19 states and Puerto Rico in a conference to discuss findings of the recent nation-wide survey conducted by his office. They will be published in pamphlet form later this fall, but the following summary of some principal points will be of interest.

1. Audio-visual education, in the survey, was defined as the "classroom use of non-book instructional materials — charts, exhibits, film strips, maps and globes, models, motion pictures, posters, radio programs, recordings, slides, television, etc."
2. All states provide audio-visual education services to local school districts. The precise nature of these services varies widely from state to state but —
3. All consider audio-visual instructional materials in the preparation of courses of study and other curriculum materials.
4. 83% sponsored or participated in audio-visual conferences during the past 2 years.
5. 79% have in their standards for school and college accreditation provisions for the classroom use of audio-visual equipment or materials.
6. 96% make fiscal grants to local school districts which may be used for audio-visual education.
7. 36% produce audio-visual materials for classroom use.
8. 57% distribute audio-visual materials free to local schools.
9. 85% have units or individuals charged with audio-visual responsibilities for their states. (In 1922, only 2 states had such persons.)
10. The conferees examined these and other findings and recommended

Washington—John Fea, Consultant, Instructional Materials, State Department of Education

Wisconsin—Russell Mosely, Supervisor of Secondary Education, State Department of Public Instruction

Missouri—Mrs. Ella Mae Flippen, Administrative Assistant, Missouri State Department of Education

The consensus of the conference was that this big-city survey should be focused upon problems considered most important by those school systems and will be comparative in nature in order to provide factual information concerning current practices and 5 to 10-year objectives relative to these problems.

Among the problems suggested by conferees were a) the design of classrooms for the use of instructional materials, including light and acoustical control; b) equipment formulas in relation to pupil enrollments; c) the use of audiovisual materials in large group instruction, including closed circuit TV; and, contrariwise, the use of such

materials for individual and very small group instruction in remedial or enrichment programs.

The U. S. Office of Education has agreed to conduct its study in cooperation with the audio-visual representatives of large-city school systems, along the lines suggested by the conferees. The study will be made during the school year 1957-58 with the results available for publication in the fall or winter of 1958.

Announcement has been made by Herschel Smith, Jackson, Mississippi, of completion of the purchase and delivery of all filmstrips, copyrights, master negatives, and originals of Curriculum Films Inc.'s exclusive filmstrip library, comprising approximately 600 color filmstrip lessons including the recently produced Comprehensive Reading Lesson series. The Curriculum Library consisting of 168 classroom units in 44 subject areas having an estimated value of well over one million dollars was purchased by Curriculum Materials Corporation of which Herschel Smith of Jackson, Mississippi, is President. The other officers and owners of the new firm are Herb M. Elkins, of the Herb M. Elkins Company of Tujunga, California; E. E. "Jack" Carter, President of National School Supply Co., Inc., Raleigh, North Carolina; and Carl J. Kunz, President of Kunz, Inc., of Philadelphia, Pennsylvania.

The new owners have announced the completion of four new integrated sets of full-color filmstrips which will be released during the summer months, Canada, Mexico, Africa and Stories for Beginners, two of which will be available by July 15, and the other two by August 31. An important feature in all new Curriculum releases will be that of a "built-in" teachers' guide right on the filmstrip. The Curriculum Filmstrip Library is reported to have the largest and fastest selling line of filmstrips on the American market, having been approved for purchase from instructional funds by many leading state, county, and city educational departments.

Of particular interest to kindergartens and nursery departments should be the Pre-Primer stories, and on the junior high school levels the new Spanish Translations.

Curriculum Materials Corporation has set up four warehouses and distributing points strategically located throughout the United States so that immediate service can be given to the customer without the necessity of the dealer carrying any sizable inventory.

Reportedly, there are several million Curriculum filmstrips in daily use throughout the United States, Canada, Mexico, and other foreign countries.

## Can You Afford "Horse & Buggy" Methods?

# Pageant Projectors are easy to use because they have:

1. Simple threading and printed film path
2. Single-switch reversing
3. Folding reel arms
4. Attached drive belts
5. Power cord permanently attached

**T**hese are the features that make the Kodascope Pageant 16mm Sound Projector easy to use.

In practice, they add up to exceptional convenience in showing movies—convenience that invites and encourages full use of available films.

The Pageant gives you a good show, too. With its unique Super-40 shutter you get extra

brilliant pictures, even when rooms can't be fully darkened. Sound is natural, faithful, full.

And every Pageant is lubricated for life. No more worries about improper oiling, the most common cause of sound projector failure.

Let the convenience of a Pageant work for you. See how it can help make every film a really good show.

Send for the free booklet, Pageant Projectors (V3-22). Or have a nearby Kodak Audio-Visual Dealer demonstrate at your convenience. No obligation either way.

# TWO GREAT NEW A-V TOOLS

"If people only understood what 'audio-visual' was all about, they would support it." This has been a premise upon which much of the work of the Audio-Visual Commission on Public Information has been based. Their aim is to make the public better informed about audio-visual, but they cannot do this alone. *You* have a job to do, too.

The Commission brought proof of what they've been doing to the EFLA and NAVA meetings in Chicago this summer. They unveiled two marvelous presentations—two great new A-V tools—to bring about better understanding of audio-visuals and their place in learning. One is an amazingly convincing brochure, **GATEWAY TO LEARNING**; the other, a superb color slide and commentary story of **THE CASE OF THE CURIOUS CITIZENS**. These two picture and word presentations are the finest of their kind we have ever seen. They will do more to inform the public about audio-visuals than anything else that has ever been done *if*—and this is a great big **IF**—if the public sees them. And that is your job. You must see to it that the people see **GATEWAY TO LEARNING** and **THE CASE OF THE CURIOUS CITIZENS**. If they see either or both of these, their eyes will be opened and they will be convinced.

**GATEWAY TO LEARNING** takes only twenty-four pictures and one hundred thirty-two words to tell its compelling story. In itself it is a sterling example of the great power of words combined with pictures when they are masterfully chosen and made to work together. The last three pages present graphic supporting evidence of the value of audio-visual tools, and testimonials from world leaders. The task now is to get this excellent booklet to the people.

There are no plans for distributing **GATEWAY TO LEARNING** directly to the public. The job of bringing this story to the people is up to you and everyone else who has an interest and belief in the use of audio-visual materials. The Commission will supply the brochures in quantity at cost. But you, and you, and you . . . have got to find the way of covering that cost and getting the booklets distributed in your town and county and state.

The task of bringing **THE CASE OF THE CURIOUS CITIZENS** to the attention of people is yours too, but this one may not be so formidable.

**GATEWAY TO LEARNING**

**THE CASE** is a sound-slide story that you can take to PTA groups, club meetings, church groups, teacher meetings—wherever people are assembled, and whenever you have a chance to tell them about audio-visual materials.

The "curious citizens" pictured are two who came to school to find out how their children are being taught. They see for themselves the broad range of audio-visual materials being used. They see why and how audio-visual tools are needed. They see a true story telling what it takes to have a well conceived and administered audio-visual program in a school.

Full credit for the production of **THE CASE OF THE CURIOUS CITIZENS** goes to Adrian Ter Louw, and to his company, Eastman Kodak, for an invaluable contribution. The complete kit for telling this story is going to be made available to you by the Commission at reproduction cost. The pictures will be unmounted transparencies ready for you to bind as slides. The sound part will be on a disc, or you may record your own words on magnetic tape. Finally in the kit there will be a utilization manual that will help you use **THE CASE OF THE CURIOUS CITIZENS** most effectively.

So write to the Commission today: **AUDIO-VISUAL COMMISSION ON PUBLIC INFORMATION**, Room 2230, 250 West 57th Street, New York 19, N. Y. Get complete information on cost of these *two great helps* to better understanding. **PLACE YOUR ORDERS**. Then do whatever you can to use these tools to bring about a wider and greater use of audio-visual methods and materials.

*Paul C. Reed*

# New from SVE

## NEW 1958 EDUCATIONAL CATALOG

Complete descriptions of hundreds of filmstrips, many with records. Grouped by grade level: Primary, Intermediate, Jr.—Sr. High. Alphabetical index. # NO SUNLIGHT — PLEASE!

By Ben M. Harris—Director of Curriculum  
Lafayette School District, Lafayette, Cal.

**H**AVE you ever watched lovely, expensive drapes being installed in a classroom and become excited with the anticipation of the audio-visual teaching methods which this room darkening will permit? Have you also experienced the bitter let-down which follows the installation of these drapes when it becomes obvious that they do not permit opaque projection or the use of color film? Have you wrestled with the problems that arise when all the kids on the sides of the room have to move in order to see? Have you gradually lost enthusiasm for using projected materials because in spite of the drapes in your classroom the amount of light admitted is such that most projections are simply not satisfactory?

Thousands of teachers all over America have had these feelings. They have felt so because for various reasons a certain number of room darkening installations have been thoroughly unsatisfactory.

## Why Many Drapes Don't Work

Unsatisfactory drapery installations are so common and the flaws so obvious that repetition of such installations should be entirely unnecessary. Actually, the flaws in drapery installations designed to provide good conditions for projection fall into the following types:

1. unsatisfactory fabric. 2. light leakage. 3. mechanical defects. 4. inadequate ventilation.

In most classrooms, the first three types of problems are inexcusable and can be prevented. The ventilation problem is more difficult to resolve and often necessitates a compromise with good conditions.

## Unsatisfactory Fabric

Under the false impression that classrooms need to be only slightly dimmed, drapery materials are often selected which do permit light penetration. Good projection conditions require an almost completely opaque drapery material. In most instances this requires either (1) a dark colored, heavy, tightly woven fabric or (2) an opaque plastic material. Light colored fabrics are rarely satisfactory *even when lined*.

## Light Leakage

This is by far the most common group of flaws making for unsatisfac-

tory drapery installations. Every classroom has special problems which must be carefully considered and the drapery installation designed accordingly. Specific light leakage problems are listed below along with possible ways of avoiding such leakage.

**"I" beam track without traverse cords, and with nylon carriers, permits operation so easy that kindergarten children operate the drapes. A wand sewn into the drape provides a grip for the small child, but omits the free-swinging wand or cord that children love to play with. Note the length of the drape. It comes to within 6" of the floor to exclude as much light as possible. Drape is in from windows to operate without disturbing window displays.**

## CAUSE OF LEAKAGE AND POSSIBLE PRECAUTIONS

1. Space between top of drape and the track or ceiling.

*A valance strip of wood or fabric mounted from the ceiling. Carriers spaced close together.*

2. Space between bottom of drape and the floor.

*Drape as long as possible and as close to the wall as possible. Chain weights in bottom hem for short drapes. For clerestory or transom windows a valance board is required at the bottom edge of the drape.*

3. Gaps where two parts of the drape meet in the center.

*Track to overlap at the center by 12 to 18 inches. 20% excess length in the fabric.*

4. Gaps where the drape meets the wall on either end.

*Drape securely fastened to the wall on one or both ends. 20% excess length in the fabric. Track to run from wall to wall. Last carrier 2 to 3 inches from the end of the fabric.*

5. Gaps where the drapes are obstructed by cabinets.

*Avoid cabinets where possible. Cut fabric to fit around cabinets neatly.*

## Mechanical Defects

Mechanical difficulties stem largely from the use of inferior hardware and faulty installations. Installations should be durable, simple, and easily operated. Precautions should include:

1. Drapes should operate without traverse cords except on clerestory or transom windows.

2. Heavy aluminum track should be used.

3. Track should be free of any sharp turns, or rough joints.

4. Track should be mounted on the ceiling, perpendicular to the floor—not on an angle (sloping ceiling).

5. Use heavy carriers which are free rolling on the track with nylon rollers. Carriers should be mounted 6 to 8 inches apart.

6. Use a cord or aluminum rod attached to the top of the drape for pulling it open and closed.

## Inadequate Ventilation

Proper ventilation of classrooms when projecting in them is a very difficult problem which will be satisfactorily solved only when special consideration is given to it in the original construction. If the windows are the primary source of ventilation, any room darkening installation is going to complicate the problem. Leaving a space of about 18 inches between the windows and the drape is some slight help.

## Summary

If teachers are to have the use of the many valuable teaching aids which must be projected they must be able to simply and easily darken their rooms. A dim room is not satisfactory—it must be quite dark. School officials can provide these conditions in most classrooms at reasonable cost. If they insist upon carefully designed drapery installations with opaque fabric, no stray light leakage and good hardware installation.

# The Absentee Teacher and the Tape Recorder

or - how an ingenious teacher  
uses a handicap to gain an advantage

by Marie E. O'Connor

Teacher of English  
Weequahic High School  
Newark, New Jersey

THE first months of the term are perhaps the most important in the training of a group — in the setting of the goals — in the cementing of the teacher-pupil relations. I was missing those formative days with my classes, for my fractured femur would keep me out of school for the entire first cycle.

I had never met these new students. I did not know their faces nor their names, much less their problems, their attitudes, their weaknesses and their talents in English. How could I bridge the gap between us? How could I prepare for the advent of me — come cast-removal? I had to bear in mind that with the second cycle, I would be a stranger come to preside rather than their first cycle teacher — a substitute — kind, sympathetic, efficient.

I own a tape recorder, and I decided to send a greeting and a lesson to my classes. This very decision was not arrived at without mental debate, for I did not wish my substitute to feel that I was ruling from an armchair across the city.

Could a tape recording hold the attention of the class, capture the personality of the teacher, convey the points of the lesson? I found this term that it could.

Briefly:

The aims of the recording were threefold: I wished their teacher to be more than a name to them; I wanted them to know I was interested in them.

Secondly, I wished to know them, their interests, their abilities.

Finally, I wished to set up a specific teacher-relationship.

The theme of the recording was: "Getting to Know You," and the main plot was a lesson in theme writing. The purpose of the composition — their introduction of themselves to me

**Absentee teacher keeps in close contact with her class by taping voice, assignments and little personal messages, and getting replies.**

— was emphasized; a specific organization of ideas urged; a vivid style of writing suggested. The pitfalls of triteness in style and content were pointed out.

The results were beyond my expectations. Primarily, I realized I had reached them. They wrote sincerely and frankly. Direct quotations can tell the story. *One lad said:* "My friends say you're the hardest teacher in the school, but I had Miss \_\_\_\_\_ in English 2, and if I lived through that term, I can take anyone."

*Another:* "Before I heard the tape-recording, I thought, "Another one of

those trite autobiographies," but your words offered a challenge to my abilities."

*Another:* "I liked the tape-recording even though it meant I had to rewrite my whole composition." (This class had received the general assignment prior to the recording.)

The informality of the relationship that was cemented was captured in the opening lines of a "D" student's effort:

"Hello! You mentioned the song 'Getting to Know You' and I can't wait to do just that, but you asked first so I will tell you about myself. You're keeping me in suspense so I would like to turn the tables. I have gathered that you enjoy honest clean fun." (He then wrote something in code which I was to decipher.)

Because time was that of which I had an ample supply, I wrote many comments on these compositions — suggestions for better life-attitudes, superior themes, supplementary reading; messages to mutual friends; words of encouragement to those who received low marks; words of force to those who wrote carelessly.

By reason of all these ties, I found upon my return to Weequahic, groups that considered we were old friends. Since I had spent so much time on the compositions (plus the fact that I am lucky enough to have an unusual memory), I was able to reinforce this feeling by frequent reference to the interests of the individuals.

As a result of this experience, I plan to experiment further with possibilities for use of the tape recorder.

# Thoughts Dramatized In Lights

The projected composition communicates more clearly with the reader and elicits ready criticism and evaluation.

A student may exclaim, "Oh, no! They'll see all my mistakes," the first time you ask to project his theme before the class. Although this shows more concern for the negative than the positive aspects of his composition, it suggests several points about the value of the opaque projector in teaching communication.

First, there is something dramatic about having your thoughts up there in lights. Size, brilliance, and the novelty of a new means of presentation conspire to dramatize both the good and bad features of student writing.

Second, the reading audience is a group of the student's peers, the one

group in the world to whom he wishes most to communicate and whose opinion most concerns him.

Most important of all, student themes projected before the group really do communicate. How many teachers of composition have been struck by the pointlessness of the average writing assignment. The student submits a theme; it is carefully corrected by the teacher and the grade is duly recorded. The paper is then returned to the student, who glances at the grade and throws the paper in the basket.

With projection, however, criticism and evaluation are integral to the communicative process itself and proceed organically from it. Furthermore, class discussion of the content and ideas develops naturally and without effort. Both technique and content are considered in their functional context and not abstracted from it.

The machine has a pointer like a small flashlight, and this pointer may

A sliding tray is used for themes and flat material requiring single projection.

Movable belt is for material that is to be continuously projected.

Adjustable platen easily accommodates itself to the thickness of books.

be used to show the exact element that is under immediate consideration. To secure follow-up, the teacher may ask the student to take brief, critical notes and then correct his paper when it is returned to him. With the modern high-powered projectors, there may be sufficient light in the room to allow for some note taking without straining the student's eyes.

An important consideration is that criticism is brought forth by the students themselves and is therefore at their level of understanding and meaning. This very largely solves the problem of pacing the work to the students' abilities and interests. Individualized instruction is the consistent pattern when the opaque projector is used. At the same time, the entire group enters into the situation as audience and as critics, with the teacher in the background.

It is true that very few compositions may be taken up in any one class period, but an adequate sampling of each student's work will be obtained over a period of time. Also, the projector method may be supplemented by other methods, including the traditional late hours of red-pencilling. It is possible, however, for the teacher to save a great deal of time if he uses the opaque projector more or less exclusively.

### The Opaque Projector

1. Dramatizes
2. Motivates
3. Lets themes communicate
4. Puts criticism in context
5. Pinpoints important features
6. Paces instruction
7. Individualizes
8. Saves the teacher's time

Manuscript form. Numbers in the margin serve as reference points for discussion and note-taking.

A summary sheet may be used for evaluation, either by the teacher or members of the class.

Class discussion of the theme content develops naturally. This way, criticism is brought forth by the students themselves, at their own level of interest and understanding.

# Training Students in A-V Operation

by Robert Knight  
Coordinator Audio-Visual Services  
Tom S. Lubbock High School

**T**HERE are many types of visual materials in use in the teaching field today. Some of these are objects, specimens, models, charts, graphs, maps, and pictures of many kinds, including those projected. Since the teacher of today is called upon to impart correctly, quickly, and efficiently those skills which young people need to serve best their country and themselves, he seeks the tools which will help him accomplish his job most effectively. Some of these take the form of projected pictures, with or without sound. Smooth and effective use of visual aids requires careful consideration of a large number of closely related problems. The adequate consideration of the problems in the selection of proper equipment, materials, and trained teachers or projectionists will solve a major portion of obstacles that go with poor and expensive presentation of visual materials.

Some of the reasons for the failure of teachers to use visual materials is that they have not been trained in the use of the equipment and there was no one in charge of coordinating the Audio-Visual program.

Audio-Visual materials are now recognized throughout public education as a vital means of teaching, and the main problem is to put the equipment and personnel into the schools.

In order to help solve this problem the Tom S. Lubbock High School has

a class of approximately thirty students, which is organized each semester on an alternating extracurricular basis. After the students have become thoroughly familiar with the operation of all types of Audio-Visual equipment

**The Audio-Visual Department designed a portable cart with which to transport projection equipment up and down stairs. The picture above shows how easily this portable conveyance can be handled by one student. Note how conveniently all of the equipment that is needed to show a 16mm film can be carried on this cart, and how the very nature of its compactness assures the safe handling of the equipment.**

used in the school, each student is given an assignment slip for some type of Audio-Visual service to be rendered during his study period. The student reports to the Audio-Visual office at the beginning of his study period, checks out the needed equipment, and goes immediately to the room in which the equipment is to be used. The student has the responsibility of transferring the equipment to and from the Audio-Visual office. After the teacher requisitions the Audio-Visual materials she desires and designates the date and time, her sole responsibility is to explain to the student projectionist the order in which the material is to be used. Should the equipment be used in the same room all day, the first period projectionist is responsible for picking up the equipment and delivering it, and the last period projectionist is responsible for returning it to the Audio-Visual office.

This department also offers a production service in the field of photography and visual materials. The students produce filmstrips, slides, and materials for all departments as requested by the teachers. An example of this is a series of 30 slides entitled "The Shakespeare Country" made for the English Department.

Audio-Visual students also operate equipment for Civic Clubs and earn \$1.50 per hour for their services. This is done quite often in the auditorium using the 16mm arc projector.

The following course of study was designed for use in Audio-Visual classes organized on an alternating extracurricular basis of high school level.

This course of study is written on a daily basis so that it may be adjusted to any type of class schedule.

#### FIRST DAY:

A general outline of the course should be presented giving the following points:

1. Credit (school).
2. Duties of projectionist.
3. Description of types of audio-visual equipment used by school.
4. Part of period used in observation of equipment.

#### SECOND AND THIRD DAY:

A general discussion of parts of 16mm projector. This is used to make operation and adjustment of 16mm projectors easier for operators. The instructor should use the machine itself for this purpose. After a general discussion of the parts of the projector, have each student orally name all parts. Through this procedure of repetition the group will get a good working knowledge of the 16mm projector.

#### FOURTH DAY:

Use the opaque projection and threading charts to discuss the principles of threading a 16mm projector. Project charts on screen and emphasize the following points:

1. Take care in determining whether the sprocket holes match with those in film.
2. Point out the size of loops and the reason for their being the correct size.
3. Explain the function of the intermittent gear.
4. Discuss the principles of the coordination of sound with picture through the sound drum.
5. Demonstrate the threading practice and the rewind practice.

#### FIFTH DAY:

Films to be shown:

"Facts about Films" followed by discussion period.

"Facts about Film" followed by discussion period.

#### SIXTH AND SEVENTH DAY:

Film to be shown:

"How to Splice," following by discussion and demonstration on the splicer. Each student should be given the opportunity to make at least 3 splices on the machine.

#### EIGHTH DAY:

Complete procedure should be practiced on setting up equipment in a classroom. Courtesy by the projectionist should be stressed throughout this procedure.

#### NINTH DAY:

Procedures of threading, operating, putting up screen, and operating amplifier should be reviewed and practiced.

#### TENTH DAY:

Continue practice on setting up equipment and threading machine.

#### ELEVENTH DAY:

Discussion and demonstration on the malfunctions of the 16mm.

#### EXAMPLE:

1. Breakdown of film during showing
2. Loose connection in speaker jack
3. Failure to turn on speaker button
4. Paper in exciter lamp
5. Speaker plug in mike jack

#### TWELFTH DAY:

A general discussion on parts of the arc projector. The opaque projector and threading charts may be used in discussion. Discussion on the operation of screen and equipment in an auditorium and general safety precautions should follow.

#### THIRTEENTH-FIFTEENTH DAYS:

During these three days not more than five students at one time should be taken into the projection booth. The time in the booth should be spent in demonstration of arc operation. Each student should go through the complete procedure of operation. (Safety precautions should be stressed at all times.) The following pages include the safety precautions to be used in a projectionist booth and a procedure sheet for operation of an arc projector. Include in one of these days a demonstration on the arc by a representative from a local company.

#### SIXTEENTH DAY:

The class should be assembled on stage and a demonstration of the operation of curtains and screen should be given with each student doing complete operation.

#### Safety Features for Lamphouse

1. Always be sure the douser is open when machine is running.
2. In case of a film break, close douser, then shut down the machine.
3. When starting off, never open

douser until machine is running at maximum speed.

4. Clean lamphouse with soft cloth after every day's showing. Clean reflector with soft cloth and glass cleaner before each day's show. Never put cleaner on reflector while it is hot. Keep all soot ash cleaned off of it thoroughly with soft cloth.
5. When striking the arc, move carbons away from each other as soon as possible, not jerkily, to prevent black soot and ash from collecting on reflector.
6. Never look at arc with the naked eye.
7. Always be sure the points of carbon are on the lines of the scope. Too much deviation can harm lamphouse, and it will prevent a poor picture on the screen.
8. Never touch a carbon that has just been taken out of the lamphouse as it is very hot.
9. Do not try to make adjustments in rate of speed, etc. (unless sponsor is present or at his orders.)
10. Pay attention to what you are doing at all times.

#### Procedure to Follow When Entering Booth

1. Turn on main booth switch.
2. Open window ports.
3. Dust off and clean machine.
4. Clean lamphouse good inside and out.
5. Clean reflector thoroughly with Windex and soft cloth.
6. Thread machine.
7. Turn on sound amplifier.
8. Check carbon to see if there is enough to burn the reel you have threaded.
9. Turn on rectifier.
10. Stride arc.
11. Start machine.
12. Open douser as soon as the machine has reached the maximum speed yet wait long enough to keep any numbers etc. off screen.
13. After reel is over close douser after "The End" has been on screen a reasonable length of time.
14. Turn off machine.
15. Turn off rectifier.
16. Rewind film.
17. Clean out lamphouse.
18. Clean off reflector with soft DRY cloth.
19. Clean off the machine.
20. Turn off the sound.
21. Close all window ports.
22. Be sure that the film has been put in the right can.

23. Turn off main booth switch.
24. Look back to see if you have missed anything.

NEVER TRY TO CLEAN THE REFLECTOR WITH ANYTHING SUCH AS WINDEX WHILE IT IS HOT. ALL CARBON DRIPPINGS SHOULD BE EMPTIED BEFORE THE SHOW. THE TRAY IS COOL AND MUCH EASIER TO HANDLE.

THE MACHINE SHOULD BE OILED AT REGULAR INTERVALS BY ONE PERSON.

CLEANLINESS IS PARAMOUNT AND SHOULD BE OBSERVED AT ALL TIMES.

NO SMOKING WILL BE TOLERATED IN THIS BOOTH AT ANY TIME BY ANYBODY.

THESE RULES SHOULD BE FOLLOWED TO THE LETTER UNLESS CHANGED BY THE AUDIO-VISUAL SUPERVISOR.

**SEVENTEENTH AND EIGHTEENTH DAYS:**

Since the recorder is the next most frequently used piece of audio-visual equipment, two days should be allotted to the recording machine. A general discussion of the parts would be satisfactory for the recorder. Each student should go through the complete threading, recording, rewind, playback, and P.A. Transfer of recording. (Specific instruction should be given on recording button and its use.)

**NINETEENTH DAY:**

The splicing of recording tape and a review of the recorder.

**TWENTIETH DAY:**

A general discussion of the parts of the filmstrip machine and its principles of operation. The opaque projector may also be covered on the same day.

**TWENTY-FIRST DAY:**

A complete day should be given on instruction on the operation of stage light and location of fuses.

**TWENTY-SECOND DAY:**

Field trip to a local theatre.

**TWENTY-THIRD, TWENTY-FOURTH, TWENTY-FIFTH DAYS:**

The basic fundamentals of Parliamentary Procedure should be covered so that student may have a working knowledge for club use.

**TWENTY-SIXTH DAY:**

Skill speed tests on 16-mm should be covered about this time to improve student skill in setting up equipment.

**TWENTY-SEVENTH AND TWENTY-EIGHTH DAYS:**

Student in this type of course will use the P.A. system very little during the year but since this type of equipment is very closely related to audio-visual, there should be about two days allotted to study the P.A. either before or after school. The group should be divided in half and report on separate days. Also some local company might

**THIRTY-FOURTH, THIRTY-FIFTH, THIRTY-SIXTH DAYS:**

Mid-term students will be enrolling in class about this time, and provision should be made to check them out on all audio-visual equipment. This may be done by assigning a projectionist to each new student for complete instruction. This will give the projectionist a good review of all equipment.

The rest of the year should be allotted to the production class with field trips, speakers, and demonstrations by local businessmen about every three weeks.

give a demonstration on the use of this equipment and each student should be examined on the use of this equipment.

**TWENTY-NINTH DAY:**

The projectionist at some time may be called upon to operate a portable amplifier and spotlight equipment. Each student should be thoroughly familiar with the use of this equipment.

**THIRTIETH DAY:**

Field trip to radio station.

**THIRTY-FIRST DAY:**

In order to make a course of this type more interesting, photography may be added in a minor way. This may be done by turning the class into a production class for audio-visual materials for the faculty. A general discussion should be given at this time.

**THIRTY-SECOND DAY:**

A general review of all equipment.

**THIRTY-THIRD DAY:**

Discussion of the theory of Intermittance with work sheets for each student.

# A-V Aches, or Seven Ways NOT to Run an A-V Program

by Sim Wilde  
Audio-Visual Coordinator  
Asheville, North Carolina

**A** WRITER'S CLAIM to fame generally comes on the wings of success. Some alert gentlemen will develop a successful AVA program and then write about it. I fear, however, I am due no such honor. My claim is, that I have made more mistakes than any co-ordinator alive. For that reason this article is an attempt on my part to help some co-ordinator avoid the troubles I've experienced. I wish I could tell you how to operate a smooth running AVA department in Your School. But, I'm sorry, you will have to contact some other person about that. I will bet, however, my last filmstrip that I can tell you more things that will NOT work than anyone else. So stay with me for a few minutes and save yourself some headaches.

My School is one of two junior high schools serving a city of fifty thousand people. We have an enrollment of around nine hundred and fifty students in grades seven, eight, and nine. We have thirty-four teachers. When I inherited the AV department, it consisted of four movie projectors, four filmstrip projectors, four record players, a tape recorder, two obsolete wire recorders, an opaque projector, one pile of assorted wires, amplifiers, and microphones, and three pieces of unidentifiable machinery. All this was housed in a room with three exits and shared with the band, the art department, and the science department.

The system for using this equipment was unique. No one knew where anything was any of the time. Since our building has three floors, a projector was placed at a central location on each floor and a spare was kept in the AVA room. To get a projector a teacher had to sign up by floor and period, on a chart on the office bulletin board. Other equipment was obtained by going to the AVA room and carting it out.

This system did one thing right. It saved wear and tear on the machines. And there was a reason. The machines simply did not get full utilization. For

instance a teacher might find three machines idle yet could not get one because her floor was booked for the day. Another fault of this system was that the machines were scattered all over the building. Cords mysteriously disappeared, carriages were damaged, and projectors were misplaced. And no one could be found responsible. There were too many places where error could occur.

In order to correct some of these points the following program was put into practice. The first move was to make the teacher responsible for signing for a projector (I furnished the schedule sheet and saw that it was posted each week), getting and returning a projector (I kept them in working order and handled the checking in and out), and showing the film (I trained any boy for her that she recommended). In this way I felt we were all carrying the load in the AVA department.

The next step was to secure well-behaved, trustworthy girls to act as "librarians." I selected these girls from study halls, classes, office helpers, or any other source. Each girl spent one period a day in the AVA room and her job was to see that nothing went out unless it was signed for. This girl also checked incoming equipment to see that all was returned in order.

That was my new plan in a nutshell. We had accomplished two big objectives. We had placed all our equipment in one room and we had given full utility to our machines. There were some disadvantages. Equipment wear and tear was greater. Naturally it would be. For one thing we were using it more. For another, carrying projectors up and down three flights of steps is not the easiest thing to do. Another disadvantage was that teachers are inclined (I do it myself) to let students take "turn-about" in the operation of a projector. This does not let any one student become "expert" in the operation of a projector, but more machines have been made avail-

able to more teachers and, after all, that is the reason we bought them.

Now I would not be so naive as to suggest that this program was put into practice without troubles; we had plenty of them! But I am beginning to hope that our troubles have been ironed out to a great extent.

Since I said at the beginning that I would tell you some things that would NOT work here are a few of them!

(1) DO NOT ALLOW any student to participate in the AVA department unless he has been thoroughly trained and checked out by you in the operation of machines and in your method of operation. Nothing can jam up your program so much as untrained personnel.

(2) DO NOT SELECT students to work in AVA simply because they express a desire to do so or because they are mechanically inclined. There is only one way to pick a person to help you in your program. You must pick on the basis of the student's past record of behavior and conduct. Most any student can learn to operate a movie projector. But not every student can behave when left on his own. This

*(Continued on page 411)*

"I think Mr. Spencer used it over the week end."

# Public "theme" A-V

Registrants sign up early at the EFLA Registration desk preparatory to taking part in the 14th Annual A-V Conference held at Chicago's Morrison Hotel, July 18th to 23rd.

Hank Ruark, NAVA Director of Information, discusses the importance of advance planning for public relations work with the press, radio and television, during the general session that was attended by more than 400 NAVA members. Slides were prepared by Henry Frye of Indiana University. The theme PR THAT PAYS specifically designed ways in which local a-v specialist dealers could help build the industry through public relations at all levels.

Inter-com instructions are given to projection and light crew by Don White, assisted by Ann Vath, NAVA visuals librarian, who checks cue-sheet. Ray Swank, NAVA secretary, arranged for National Rental and Projection service for NAVA meetings. The new NAVA president, William Birchfield, claims the general sessions, aided by the Projection Service crew, were the "best yet."

Thorold Dickinson, chief speaker at the EFLA Conference, and head of UN films section, briefs Emily Jones, EFLA secretary, on content of new series of films planned by UN. Verne Stockman, EFLA program chairman, E. Illinois State College, and Erwin Welke, EFLA president, of Univ. of Minnesota, look on.

# Relations Activates Conference

Adrian Terlouw, educational consultant for Eastman Kodak Co., Rochester, N.Y., produced one of the best public relations tools yet to be placed in the hands of a-v people. The slide set, "The Case Of the Curious Citizens," tells the story of two curious parents who explore their child's use of school-provided audio-visuals, and discover just how much modern teaching needs modern tools. Mr. Terlouw is shown here presenting the first set to William Birchfield, NAVA president.

Bill Brigge of Indiana University explains a point in the use of high contrast photo materials at the EFLA "Do It Yourself" Circus. Here, it was possible for conference registrants to view at close range, the newest methods for preparing slides, exhibits, and other visual materials.

Edward McMahon of Mankato State College, Minn. (formerly of Indiana University), demonstrates the picture lift process during the EFLA Do-It-Yourself Circus.

Dr. Clyde Miller, head of the Ohio department of education a-v section, discusses a point with Dr. Ann Hyer, executive secretary of DAVI, and Dr. Seerley Reid, chief of the visual education section U.S. Office of Education. Dr. Reid was in charge of a reporting conference which discussed with representatives of the state department of education, the results of the first national survey since 1922 of a-v activities at state level, and of a second conference which planned a similar survey with representatives of 38 large-city public schools systems.

# Evaluation of new films

## WAYS TO FIND OUT

(Churchill-Wexler, 801 North Seward Street, Los Angeles 38, California) 10 minutes, 16mm, sound, color or black and white, 1956. \$100 or \$50.

## DESCRIPTION

Beno, a seven-year-old child, discovers that he has many ways for finding out about things, that is, by seeing, hearing, feeling, tasting, and smelling.

As he is returning home from school in the rain, Beno thinks of the different ways he has of knowing that it is raining. He can see the rain: he can hear the thunder, his boots sloshing, and the sound of the rain on his lunch bucket. He can feel its wetness; he can tell by tasting that it is water and not lemonade; and he can smell the wonderful smell of wet growing things.

*Film reviews and evaluations on these pages are based upon discussions by a preview committee composed of Indiana University faculty members, public school teachers, students of audio-visual education, and staff members of the Audio-Visual center of Indiana University.*

*Preview prints should be sent directly to the Audio-Visual Center, Indiana University, Bloomington, Indiana.*

An earthworm on the sidewalk also knows it is raining, but it has no ears, eyes, nose or tongue; it can only feel. Beno wonders what it would be like if feeling were the only way to find out about things.

At home, how does Beno find something to eat — with his eyes, of course. He can tell the differences among a rubber ball, an apple, an orange, and a grapefruit by their different shapes, colors, and sizes.

Just by listening, Beno can find out many things. He hears a mewling kitten, his mother washing dishes, and the telephone ringing, the clock chiming, and the lamp being knocked to the floor by the kitten.

He can tell what many things are made of by just touching them. For example, he knows the touch of the warm, soft kitten and the soft rug that

does not have the kitten's shape.

Beno knows that there are all sorts of wonderful smells in the world. Right now, just before mealtime, the oven smells are delightful. He also knows from the smell of soap that it is not good to eat. If he should taste the soap, this would also tell him that it is not good to eat. Beno can easily tell an orange from a lemon just by tasting.

Outside, the sun is out. The robin knows it and the snail in its own way knows it. What does Beno see outside? What does he hear, taste, and smell? He knows that it's a good looking, good tasting, good feeling, good sounding, good smelling world in which he lives.

## APPRAISAL

This film combines educationally useful content with good technical quality, realistic action, and good treatment to make it delightfully interesting and effective.

It is of particular value to pre-school and primary-grade school children to familiarize them with the usefulness of their five senses in learning about their environment. It not only helps them to become more alert to their surroundings but to impress on them that this is a wonderful world in which we live. It will help to lay the groundwork at an early age for important behavioral patterns, i.e., curiosity, sensitivity to surroundings, appreciation of things that many times are not noticed, and an appreciation of the capabilities of one's body.

The indigenous sounds used contribute much to the effectiveness of the film. In addition, the woman narrator and the narration involve the audience with warm, friendly, sometimes humorous, statements.

— George Vuke

## SUEZ

(McGraw-Hill Book Company, 330 West 42nd Street, New York 36, N. Y.) 16 minutes, 16mm, sound, color, 1956. \$195.00. Produced by International Film Foundation.

## DESCRIPTION

From this film produced by Julien Bryan, one gets a feeling for the international atmosphere surrounding the Suez Canal operations. One sees the relationship this canal has to the people who use and operate it. There are more than 5,000 workers and engineers involved in the efficient running of the canal speaking at least 19

Richmond 23, Virginia

different languages. The interests of many lands are represented.

Ferdinand de Lesseps' dream was "to open up the world to all nations." He lived to see his Suez Canal become a passage between East and West. This 100-mile waterway, cut across the Egyptian desert, joining the Mediterranean and the Red Sea, has become one of the wonders of the world. De-Lesseps also started building the Panama Canal but it remained for others to realize this part of his dream. Today focus is again on Suez and it has become the vital concern of the entire world. In the last 20 years American use of the canal has increased in importance to the point where now the United States controls the third largest fleet of ships operating through it.

The actual operations involved in getting ships through the canal are pictured. The control and dispatching centers are shown and there are intimate shots of the work of the special pilots who must navigate each ship through the length of the canal. All the ships must pass in single-file convoy through recently built bypasses in order to pass each other. One is taken for a journey through the canal from Port Said to Suez stopping half-way at Ismailia to change pilots. At Ismailia some time is spent at home with one of the pilots and his family.

The never-ending operations necessary to maintain the canal at full efficiency are presented. Dredging ships ply its length continuously sucking up sand and silt from the bottom. One views an interesting attempt to apply a new experimental system being used to support the banks of the Mississippi River with the hope that it will be found practical to support the sandy banks of the Suez. The shifting desert sand and wake from the big ships threaten the canal's banks constantly.

The busy repair shops where the "technology and skills of the new world are mixed with customs and races of the old," are visited.

The film includes a thumbnail sketch of historical and geographical backgrounds of Suez. Information is provided to see the Suez Canal in its proper perspective. Shots of the art and architecture of ancient Egyptian dynasties are used to recreate a feeling for the early eras during which primitive ditches, canals, and trade routes existed, foreshadowing the present canal. Animated color maps are used to present the historical and geographical descriptions.

#### APPRAISAL

The color photography and sound recording are excellent. The film has a good script, an interesting musical score, and a clear speaking, sympa-

thetic narrator. The film editing is well done. In addition to technical competence there is a fine, aesthetic sense evident throughout.

The film should prove to be of great value in the junior and senior high schools with both students and teachers and also with college and adult groups in areas of social studies, current events, geography, international understanding, and as a point of departure for discussions about the Middle East.

In general, the film illustrates operation of the Suez Canal as one of the first attempts at international cooperation. It is stated that de Lesseps conceived the canal as being operated "by a family of men of different skills, speaking different languages, all working and living together." Though the film refers to the current, critical Suez problem and its international character, it does not pretend to become involved except to say that the canal "must continue to serve all nations."

—Maurice Kessman

### SEA ADVENTURES OF SANDY THE SNAIL

(Encyclopaedia Britannica Films, Inc., 1150 Wilmette Avenue, Wilmette, Illinois) 15 minutes, 16mm, sound, color, 1957. \$150.

# Wheelit! Don't Carry It!

## Now! Wheelits are available in both Folding and NON-Folding Types

**Non-Folding Wheelit #4102**

En route with machine and supplies (above). In stationary position for school room film projection (below).

The new NON-Folding Wheelit is designed primarily for room to room, floor to floor service where storage space is not limited. Its sturdy footbrake holds it stationary for projection purposes, and it makes transportation of machines, books and school supplies easy and safe.

The Folding Wheelit is compact enough to fit easily into an auto trunk, closet or other limited storage space.

Wheelits are perfectly balanced for heavy loads, surprisingly easy to steer and maneuver. They go up or down stairs, over curbs, around close turns, through narrow doorways and aisles. Specifications for the new Non-Folding Wheelit include:

- All-steel construction (except platforms)
- Load capacity up to 300 pounds
- Top platform height—41 inches
- Second platform height—14 inches
- 12" rear wheels with semi-pneumatic tires
- 4" rubber-tired swivel casters in front
- Thick, sound-resisting platforms with scuff-resisting Formica tops
- Heavy web straps to secure loads
- Foot brake for stationary use

See Your Audio-Visual Education or School Supply Dealer. Descriptive Folder on Request

Dept. E5  
Manufactured by Gruber Products Co., Toledo 6, Ohio

**Folding Wheelit #350**

Moves equipment or supplies anywhere. Folds easily into car trunk.

### DESCRIPTION

A teacher-artist, Betty Ohlrogge, introduces some of her pets in her little aquarium — beautiful Goldilocks, the goldfish; a slow moving striped fish called Porky; and little Sandy the snail, who is almost too small to see. She observes that Sandy, who is cooped up in the little aquarium, might find a visit to the Pacific Ocean floor very interesting, and suggests that the audience follow Sandy as she finger paints his imaginary sea adventures. The major portion of the film depicts Sandy's sea adventures through Miss Ohlrogge's finger painting and explaining about the animals Sandy meets.

As the teacher-demonstrator prepares to tell of Sandy's adventure she describes how he looks in the underwater setting, and illustrates her description by finger painting Sandy with a hard shell covering his soft body, two feelers that wave about, and a long foot which he uses for creeping. On the sea floor are red seaweeds and blue-green kelp. With this setting Miss Ohlrogge proceeds to paint and describe the sea folk which Sandy saw on his visit.

The first creature which Sandy sees is a starfish — a queer looking fish that creeps along on his five legs or rays which are covered on the under side with suction cups and at the end of these rays are eyes that can only tell light from darkness. The starfish has no teeth but it uses the suction cups to fasten itself on a shell or oyster and pulls it apart. Then its mouth opens and out comes its stomach which catches the food and digests it.

As Sandy moves along he sees a creature which makes him blink his eyes — a balloon-like fish covered with spines. The puffer, as it is called, inflates itself with air when it wants to go to the surface and deflates itself when it wants to sink. Its spines are designed to protect itself from larger fishes or creatures which might want to swallow it for food.

While still wondering about the puffer, Sandy moves on, and looks just in time to see a sight which makes him take cover under what he thinks is a rock — two large sharks! Their shadows darken for a time the ocean floor and Sandy shudders. He sees their large sharp teeth that look powerful enough to grind anything to bits. When sharks lose their teeth they grow another set. Sandy does not have long to fear for soon the sharks swim away and he comes out from under his hiding place and finds it to be another sea creature — an abalone. Miss Ohlrogge calls attention to the fact that the outside of the abalone shell looks like a rock, but on the inside the shell gleams with the colors of the rainbow. She tries to achieve the rainbow effect by dabbing different colors on her sketch of the inside part of the shell and then with a sweep of her palm, she mixes the various colors and produces the desired effect.

Miss Ohlrogge puts the finishing touches on the abalone and then proceeds to paint and tell about the last two creatures which caught Sandy's attention — sea horses, tiny fish whose heads look like those of horses. They are always in an upright position, whether they are swimming up and down or to and fro.

As Sandy's short but exciting sea adventures come to an end, Miss Ohlrogge reviews for her audience the strange yet fascinating sea folk which Sandy met on the ocean floor and points out that these are but a few of the millions of creatures which inhabit the ocean.

### APPRAISAL

The teacher-demonstrator couples her skill in finger painting with a smoothly flowing descriptive and informative narration which invests her static sketches with interest and appeal. While she artfully paints the sea creatures, she gives interesting information about them. The film is suitable for the primary level and may be used in a number of ways. It can be used

to stimulate the children's imagination, creativeness, and aesthetic expression in language and in finger painting or drawing. It can also be used to stimulate the interest of children in science, particularly to learn or study more about the creatures which inhabit the ocean.

— Raquel Manalaysay

## MEXICAN VILLAGE LIFE AND MEXICAN VILLAGE FAMILY

(Paul Hoeffler, Hollywood, California)  
19 and 20 minutes, respectively, 16mm,  
sound, color, 1955. \$145 each.

### DESCRIPTION

Santiago de Tlacotepec, an agricultural village near the famous market town of Toluca is the locale of MEXICAN VILLAGE LIFE and of MEXICAN VILLAGE FAMILY, companion films by the same producer. The pattern of life of the people who live there is the subject of both these films. MEXICAN VILLAGE FAMILY treats the daily activities of the various members of a family who live in Tlacotepec and the relation of these activities to other members of the family. MEXICAN VILLAGE LIFE, on the other hand, is concerned with the people in a more general way. It shows their principal occupations, their local government, their school and church, their social customs, and the relation of their village to its nearest market town.

### MEXICAN VILLAGE LIFE:

The life of the villages is simple, unchanged in many ways from the life of the Aztecs who once inhabited this 8,000 foot high mountain valley. Most of the heads of families are farmers who till a small plot of land outside the village. Corn is the principal crop and it is consumed locally as food. Other food crops, particularly peas and beans, are planted on the hill-sides. Some of the green corn leaves, and a great deal of the wild mustard that grows among the corn, are carried by men and burros to the village to feed milk cows. A substitute for milk in the diet, however, is obtained from the juice of a wild cactus plant. The only fuel for cooking is wood which must be gathered in the mountains. Sometimes people sell some of their wood in Toluca and use the money

to buy coffee, sugar, and other food items not produced locally.

Water is a problem in the village because there is usually no rain from October to June. Groups of women wash their laundry along the stream beds and dry it on the nearby grass. All water for household use must be carried by hand in cans or jars from a cement tank near the church. This tank is connected by a concrete ditch to its supply, a spring on higher ground outside the village. When the supply of water in the tank becomes low, the village delegates meet with the local commissioner who works under a representative of the state government in Toluca. They ask that the state government provide them with materials to build a larger tank.

The elementary and secondary school has eight teachers. The classrooms are similar to those in the United States, except that they often use a patio for a classroom. Intermediate-grade students are shown studying the physiology of the human body.

Everyone in the village goes to church on Sunday. The church is the most ornate building in the village and it is one of the oldest. Closely linked to the church worship is a fiesta in honor of the patron saint of the village. Part of the festivities, a street procession with musical accompaniment by a brass band, is shown in the film.

The children kiss the hands of their older relatives when they meet them

portafilms Orchard Lake, Mich.

on the street. When the children play together, they enjoy versions of handball and hopscotch. On Market Day many of the villages take their fruits, vegetables, and handicrafts with them on the bus to Toluca where they sell them, buy other goods, and exchange news with friends from other villages. Those who return without goods usually walk the six miles home in order to save bus fare.

### MEXICAN VILLAGE FAMILY:

This film is about a family who live in Tlacotepec. Ysidro, the father, is a farmer who grows corn on a plot of ground outside the village. He is also the village tax collector and an accomplished weaver of shawls. Miguel, his oldest son, helps him keep the tax records and goes to a school in Toluca where he is preparing to become a teacher. Four-year-old Pedro is too young to go to school, so he tends his pet rabbit and learns to roll a hoop. Sometimes he goes with his mother to gather corn leaves to feed their cow. There is a baby named Luis. The thirteen-year-old daughter, Yolanda, when she is not attending the village school, helps her mother, Lupe, and her grandmother, Pilar, with household tasks. Sometimes she embroiders a table cloth.

An important activity of this Mexican home is the preparation of food for the family. Pilar, aided by a bundle of dry cobs, shells corn by hand that Ysidro has grown on his farm. Then she soaks this shelled corn in a lime solution over a fire to soften it. Pilar and Yolanda take the soft kernels to be ground at the village mill. Lupe and Pilar roll and pat the resultant dough into tortillas and bake them.

Other foods prepared include tacos filled with shelled peas, tamales filled with wild cherry jam, and a dish which combines avocado, hot peppers, sesame seed, and spices. The family buys chocolate, sugar, and chili peppers with the money they make from the sale of milk from their two cows.

The autumn harvest, which requires the help of most of the family, is celebrated by observance at home of a day of thanksgiving. Lupe decorates the house with flowers. A prayer is said before the statue of the Virgin. The main meal includes sweet drinks made from new corn and sweet cakes which have been bought for the occasion. This day of quiet contentment ends with the songs of a visiting friend who accompanies himself on a guitar.

### APPRAISAL

MEXICAN VILLAGE LIFE and MEXICAN VILLAGE FAMILY are straightforward factual films with a prospect of exceptional usefulness. The producer has had the collaboration of the California State Curriculum Commission and the Bureau of Audio-Visual Education of the California State Department of Education in making it so. The films are most easily correlated with social studies units on Mexico and on community life. Since MEXICAN VILLAGE LIFE refers to such items as "Aztecs" and "tacos" without explaining them, since it is concerned with social living on a community level, and since the school children pictured and their activities are of upper-elementary level, one might assume the target audience to be the intermediate grades. The concepts presented are related to a great variety of the specialized social studies disciplines such as geography, history, economics, government, and sociology.

Although the films have an English track, they may be used at any grade level to stimulate interest in the study of the Spanish language. The chairman of the Department of Spanish and Portuguese of Indiana University plans to show them on a weekly departmental film series which will include both Spanish and English language films.

The two films have a charm for general adult audiences, too. The situations are authentic and believable. The first person commentary which is rendered by a narrator with just a slight accent is just right. The professional film maker might be envious of the superior color photography by Willard C. Hahn. On the other hand, he might suggest ways of reorganizing the same film material to provide better continuity.

—Ledford Carter

# Church department by WILLIAM S. HOCKMAN

## Good Acting Counts

In any religious film running 72 minutes the story line and the acting had better be good; and, it is good in Concordia's recent release, *The Unfinished Task*. It presents with dramatic power the long conflict between a successful and materialistic father and his spiritually sensitive son. In essential structure this story is as true as a slice out of the life of any minister's parish. This strong story plus acting by some top-drawer talent gives us a film with cinematic merits a cut or two above most on the 35mm screens. And don't let that B&W bother you. It heightens, never lowers, dramatic intensity.

**Roy Collins, TV and movie actor, in starring role in the Concordia film, *The Unfinished Task*. Film won two religious "Oscars," one for best motion picture and one for Collins' sensitive portrayal.**

Unreconciled to his son's missionary work, Bradford has much to ponder when tropical fever cuts short a promising career. Slowly he gropes his way to a new plateau of happiness and usefulness in his own life.

There is power in this film, a skillful blend of several themes: father domination, missions, stewardship, love, and personal dedication to the highest values as well as unconscious serfdom to mediocre ones. It speaks eloquently on these themes and we recommend it for all kinds of youth and adult audiences.

Produced by Family Films, Inc. for Concordia Films (3358 S. Jefferson Ave., St. Louis 19, Mo.), it is currently available at a rental of \$22.50.

## Study Theme Filmstrips

Friendship Press (257 Fourth Ave., N. Y. 10) has released two new filmstrips on this year's study themes. *Kimiko of Japan* is a 64-frame color filmstrip for use with Primary and Junior children. It shows in good photography something of the daily life of Kimiko, a girl of eleven. Its best use will be to give information, to shape attitudes by friendly talk; and, to motivate reading.

*It Happens Every Day* is a 58-frame color filmstrip designed to give perspective for Christians and to deepen their desire to demonstrate Christian faith in their attitudes and actions toward all races. Both art (34 frames) and live photography are used, each having good essential qualities.

Both filmstrips have good printed guides suggesting methods of use and listing excellent resource materials. (\$5.00 ea.; order from F. P. above)

## Social Action

*Call For The Question* is a 53-frame sound and color filmstrip designed to awaken synagogue leaders to a deeper appreciation of the relationship between the principles of Judaism and the social issues of the community. It is equally useful to the church for the same purpose, and can be used to motivate the creation of a social action committee for the church. The art work is pleasing and effective, and the commentary dramatic and well recorded. When used in synagogue or church as the guide suggests, good results are just about certain. Recommended. (From Union of American Hebrew Congregations, 838 Fifth Ave., N. Y. 21; \$7.50)

## Choosing A Job

The Christian Education Press (1505 Race Street, Philadelphia 7) has released a 67-frame color filmstrip with printed script, *For Thee I Live*, which sets the choosing of a job by a college graduate in the context of the Christian faith — and does a pretty fair job

of it. The art is a little too pastel and pretty. The script for youth and adult lacks punch and adulthood. That for children is stronger. Taken as a whole it is more descriptive than motivational. Recommended to the careful user to help him get the job done.

## Split-Level Living

It can mean a lot of things: Father going one way, mother another — with the children going a third way for recreation and even for church. It might mean income down here, family expenditures up there. Or, one level of morals on Sunday, another through the week. And so on!

But, in the 29-minute BFC (Broadcasting and Film Commission) film, *Split-Level Family*, it has to do with the family tension which arises when a teenage girl puts some Christian stewardship convictions into practice. Sponsored by some 11 denominations, this fine film is now available from local A-V libraries across the country. Color rents for \$12; B&W for \$8.00, and the dramatic impact is not lessened in the black-and-white version. Recommended for young people and up, and for all kinds of adult groups, and just the thing for that Sunday evening service.

**Scene from the film *Split-Level Family*, produced by Family Films.**

**Bryan's Japan Film**

With Japan the overseas mission study theme for this year, churches all over the country will welcome Julian Bryan's 25-minute color documentary, Japan, which is being currently released by International Film Foundation (1 East 42nd Street, N.Y. 17.)

It is a good film — because the photography is always interesting, informative, and satisfying. It is a useful film — because the church needs visual background for a fuller understanding of Japan, its people, and its problems. It is a good film because the pictorial element dominates and the pertinent commentary is nicely narrated to supplement, never override, the flow of images.

It is a satisfying film, because we get a pretty good look at what we see — a salesman demonstrating his tractor to the village farmers; kindergarten children at play; a family having Thanksgiving dinner; ships searching the sea for food; nets being mended by hand; an ocean-going boat being constructed of hand-sawed planks; and, a big catch of small fish being unloaded in the ancient way, by woman and man power.

We see, too, the products of her competent and growing technology: cameras for the world market; busses for the streets of Santiago, Chile; IBM machines for the Far East; and, great steel ships for herself, Europe, and the United States to carry the goods of life-giving commerce.

We see her mountains, her waterfalls, and her hydro-electric power plants. We come to appreciate the vast reservoir of her inherited and acquired skills, so well illustrated by her beautiful textiles and dependable optical goods.

We are given glimpses of many more things—a little girl doing a costume dance on TV, a street carnival, and the prelude to a wrestling match. As the film closes, we see a group of alert people discussing Japan's destiny, and the voice of world-traveler Bryan is saying that it looks bright to him because of her vast skills, her abundant human energy, and her unflagging will to work.

But what of religion? It was the intention of this film to leave religion to other films—to those sensitive to its nuances and values—and to seek only to give visual background for those who would study and learn and think about Japan. For this purpose it is highly recommended. (WSH)

**Still Useful**

*Japanese Family* was made by Julian Bryan several years ago but is as charming and useful as ever. It gives

a sympathetic portrayal in 23 minutes of middle class family living, skipping the religious side. It can be used to give background for the study of Japan by Juniors, young people and adults. The B&W photography is good and the sound excellent. (Try your local A-V dealer; or, write to International Film Foundation, 1 East 42nd Street, N. Y. 17.)

**Lands and Peoples**

Two 13-minute motion pictures, in either color or B&W, can be of great usefulness to the churches: *Southeast Asia: Lands and People*, and *Indonesia: The Land and the People*. In the first we are given an overview of Burma, Thailand, Malaya, and Indochina. We learn how rice, rubber, tin, oil and teak are bringing these countries into the currents of world influence. In the second, in some ways a better film, we survey the geography and history of the East Indies Islands. We sense the surge of the Indonesian people toward political independence and economic development. Religion is not touched, but here is background for Juniors and up as they seek to understand Christian missions in this part of the world and appreciate the indigenous religions. (Coronet Films, Coronet Building, Chicago 1, Ill.; 1957; teachers' guide.)

**Overseas Blind**

A comprehensive story on blindness around the world! *Assignment Overseas*, a 15-minute B&W film narrated by that renowned news commentator, Lowell Thomas, is just that. Here is a vivid story on the 14 million sightless people of the world and what is being done to help them. This film is interesting, informative, and important. Civic and service clubs; church groups for men and women; youth groups in church, synagogue and college; and people in their home via TV, should see this film. (From American Foundation for Overseas Blind, Inc., 22 W. 17th St., N. Y. 11, for a service fee of \$2.50.)

**Blake's Job**

The English mystic artist toward the end of his career did a series of illustrations of *The Book of Job*. Now, in a round-about-way, these illustrations get wedded to William's "Job—A Masque for Dance" to produce the film *The Book of Job*. For me, an illustration of a new art form (of doubtful value) and not to be taken seriously as a religious film. (From Film Images, Inc., 1860 Broadway, N. Y.)  
—WSH

## THE FIRST PLATEAU

By Rev. Herbert F. Lowe, President  
Geneva Films, Inc., Fort Lee, N. J.

There was a time when few church people knew anything about motion picture communication. During the last 15 years the dedicated efforts of pioneers, some of them well known to the readers of this magazine, have begun to pay off. Now we have a generation of leaders in the church capable of dealing with the mass media and able to speak the language of both user and producer. The church, under these new leaders, is spending audio-visual budgets which would have shocked the parochial churchmen a decade or so ago.

Now, at last, we have reached the first plateau, and we must not only hold our own but move forward. New levels of communications sophistication must become operative in church audio-visual affairs. This new understanding of communication will illuminate our conception of the Christian community, the program and work of the church, the present and future work of the ministry, and even aspects of Christian theology. A feeling seems to be arising that the preaching and sacramental ministeries of the church are, after all, forms of communication. Are not such books as Halford Luccock's "Communicating The Gospel" and Malcolm Boyd's "Crisis In Communication" signs of these times?

It may well be that the vital future of Christianity is now a seedling under the fostering shade of what we know as concern for real and effective communication and communion. At the University of Southern California last summer promising young leaders of the churches engaged in critical research and perceptive discussion on the use of the motion picture and other mass media in the communication of religion. Copies of the published findings of one of these seminars are being requested by people in all parts of the world.

Technical progress now being made in the industry is bound to attract the attention of responsible church executives. They will need to evaluate such things as wide-screen, color printing from inter-negative, new prompting techniques, and improvements in sound reproduction. What is the church's equivalent to these words of the American Telephone and Telegraph Co.?

"We want to build a communication system that will do anything people could ask of it — carry every conceivable kind of information over any distance — words, music, pictures, mathematical calculations, your business reports and your 'girl's best smile.'" There is a growing interest in pre-production testing, long a felt need in the church field. We need, too,

to create feed-back mechanisms for both long and short range planning. We need experts in the philosophy and science of communication to lay down the practical ground rules for the relation of the several mass media to the categorical and functional objectives of the church. We are living in one of the great days of the church, Kenneth Scott Latourette frequently reminds us. It could be that today is but a pale shadow of tomorrow. We face exciting horizons, and need seriously to prepare for their arrival.

Some recent books point in this direction. I am thinking of "Film Use In The Church" by Parker et al; of "The Television Audience and Religion," by Parker, Harry, and Smythe; of "How To Preach To People's Needs," by Edgar N. Jackson; and of "Non-Verbal Communication," by

every Church member should see

# The Unfinished Task

on foreign missions acclaimed  
the "Spiritual Hit of the Year"

Designed to win support for stewardship and mission programs, and to encourage young people to enter full-time Christian service, this award-winning film stresses the importance of carrying Christ's message to unchurched millions throughout the world. It has received the N.E.F.F. Award as the outstanding motion picture of the year and has been praised by church leaders.

*"I can say without hesitation that it is one of the finest missionary films we have ever had and touches an area of concern hitherto seldom reached."*

—Rev. Peter Allinger,

Ruesch and Kees. At almost every A-V workshop, prophetic voices are challenging the church to think out the communication of the Gospel in terms of present-day media. A contemporary Amos is crying, "Woe unto the church, for it has closed its mind to communications theory and it has talked from its own mouth into its own ears."

What can the workshop at Green Lake do? It can add seminars which can think toward the frontiers, a solid job that it cannot evade any longer. The theological seminaries have a responsibility, but who will awaken them to it? In one of the best only four theologs were studying T.V. What of the other hundreds? Surely pioneers are needed here.

We stand at the end of the road, not at the crossroads. Unbroken and untrod territory lies ahead. The telephone poles and the street lights are back of us. The paved road of the known is at an end. Yet we cannot remain here. We must move ahead. Perhaps even the panic reaction of 'Let's try anything,' will get us under way from where we are to where we ought to be.

The church's A-V leaders should meet often for thoughtful discussion — after the fashion of the Great Book clubs. The more advanced seminaries should set up communication conferences. Some real research money should be found for the use of adventuresome pioneers, and we don't refer to \$10,000 peanut bags of money! Let's have a little more respect for the kinship we have with secular education.

We may know gadgets, but few of us really know communications in both theory and practice. We must master all aspects of communication, and develop in the next decade those who can both stimulate, guide, and use the communications revolution now taking place. The future needs a new breed who will be consecrated, committed, and also competent. May those who have read this far make their contribution.

"Participation in the world's brotherhood" is the ultimate objective of every growing child. And when the child, or the child and his comrades, can lead the community in the realization of a cherished objective, no danger is too great, no effort too trivial for any child.

Children participate in their reading experiences, and in their listening experiences by creating vicarious images involving themselves cast in the hero roles. It is always a pleasure to hear new recordings aimed directly at these ten, eleven and twelve year old boys and girls and, particularly so when they are as unusual and worthwhile as "The Wheel on the School."

**"THE WHEEL ON THE SCHOOL"** Newbery Award Records (NALP-1001) New York City is this teachers' joy. It is an unusual recording based on the book by Meindert DeJong. The story is enriched and benefited by the translation from the printed page to vibrant music and voice. The story itself, involving the desire of school children of the Dutch fishing village of Shora to bring storks to nest in their community, delights children and interests them. The recording gives added dimension to the story through sound—sound represented by excellent acting and fine music—and thus fine emphasis and aural focus give this story added reality.

# SOUND advice

about audio materials  
and equipment

by MAX U. BILDERSEE

To say that the record and the story have a place in the English class is not superfluous. Listening children may wish to "act out" the parts and recreate the story in the classroom. Further, because the children of Shora are the leaders who give the adult population a community project, it may well be introduced in the social studies class not only for the literary value, but also as a part of a unit in communication, and certainly under the general heading of "Children of other Lands." "The Wheel on the School" is not a diamond in the rough—it is a carefully faceted and set gem which every school can use effectively.

Poetry is considered by many to be man's closest approach to musical composition through words. Frequently, in fact, that addition of musical accompaniment adds to the enjoyment of hearing poetry well read. And obviously, just as music is meant to be heard, not read silently, so too is poetry intended for aural appreciation and comprehension. Fortunate indeed

is the teacher, and his students, who can read poetry well and give the words depth and breadth in the delivery. But we are not all so gifted and for the less fortunate a wide variety of recordings are available for classroom presentation. Indeed, in some instances, the same poem has been read and recorded by more than one artist and through listening to both the alert teacher can help students develop worthy contrasts and comparisons for study purposes. These differences and similarities will involve more than mere techniques of delivery but will include nuances of interpretation, pronunciation and other aspects of presentation which make heard poetry best.

Lexington Records offers two such recordings worthy of consideration for school audio collections, for libraries and indeed for homes. "THE POETRY OF KEATS AND SHELLEY" (Lexington 7505), read by Theodore Marcuse, is one of these. Mr. Marcuse endeavors to add novelty to his delivery. Thus in reading "Ozymand-

now

## audiotape gives you C-SLOT THREADING

... the fastest-threading reel ever developed!

**Only C-SLOT threading gives you these advantages:**

- No kinks or loops in tape*
- No "pigtailed" to stick up and break off or cause reel to wobble when turned over*
- No need to turn reel by hand to anchor tape*

**PLUS these improved construction features:**

- Smooth, unbroken rim — no slit to warp or bind*
- Perfectly smooth inner surface — no sharp edges to catch or roughen tape*
- Strong, non-warping construction — the ultimate in reel ruggedness*

### HERE'S ALL YOU HAVE TO DO:

1. Insert tape through flange opening at top of C-slot.

2. Drop tape into slot, leaving about 1 inch projecting beyond the hub with tape slack on both sides of recording head.

### THEN PRESS THE "START" BUTTON!

Tape will grip and hold firmly . . .  
no need to turn reel by hand to anchor free end.

ALPHA RECORDS

70 5th AVENUE, NEW YORK 11, N. Y.

ias" the opening lines are read in a most "matter of fact" tone as the reader recounts the story. As the mood changes so does the voice and the vibrato effect is introduced and brought into sharp focus to emphasize the scene surrounding the fallen statue. Effective use of modern recording techniques unavailable to the platform reader is demonstrated as a slight "echo chamber" effect is introduced as Mr. Marcuse delivers the lines which appear on the pedestal:

"My name is Ozymandias, King of  
Kings;

Look on my works, ye Mighty, and  
despair!"

In addition to Ozymandias, Mr. Marcuse reads Shelley's "Ode to the West Wind," "To a Skylark," "Love's Philosophy," "Hymn to Intellectual Beauty," "Summer and Winter" and "To Night." From the tremendous variety of works written by John Keats Mr. Marcuse reads "Ode to a Nightingale," "La Belle Dame Sans Merci," "Ode on a Grecian Urn," "Ode on Melancholy," "Song About Myself" and three sonnets, "On First Looking Into Chapman's Homer," "To One Who Has Been Living in City Pent," and "When I Have Fears That I May Cease To Be." It is interesting and encouraging to note that comparison of this material with textbooks in current use shows that many of these poems are taught in secondary schools and, of course, in colleges today.

By way of contrast and comparison the "ANTHOLOGY OF ENGLISH AND AMERICAN POETRY" — VOL-  
UME III (Lexington 7520) offers two of the above mentioned poems by Shelley ("To a Skylark" and "Ozy-

mandias") as well as two of John Keats' poems ("Ode to a Nightingale" and "Ode on a Grecian Urn") read in a far different style. In the anthology David Hooks reads Thomas Moore's "The Harp That Once Through Tara's Halls," Thomas Campbell's "Lord Ullin's Daughter," Leigh Hunt's "Abou Ben Adhem" (which can be used very effectively with both elementary school and junior high school groups), Allan Cunningham's "A Wet Sheet and a Flowing Sea," Byron's "Vision of Belshazzar," "Destruction of Sennacherib," "All for Love" and "So We'll Go No More A-Roving." Other readers on this recording are Heidi Mayer and Dean Almquist and other poems heard and poets represented are "Lochinvar" and "Breathes There the Man" (Walter Scott), "In-chape Rock" (Robert Southey), "Waterloo" (George Byron) and "From 'Endymion'" and "A Thing of Beauty" (John Keats).

Both of these recordings are obviously worthy of school use. They complement each other and, either separately or together, they can be made to contribute markedly to the study and appreciation of poetry.

All too often high school students consider poetry to be "sissy stuff" and a source of giggly amusement rather than a creation of beauty. But through the medium of the recording the poem gains new respect and the student develops enlarged perspective. Frequently when we demonstrate these and similar recordings to teacher groups we hear the unhappy comment "I wish they had had these recordings when I was in school—I'd have learned so much from them."

**"THE SONG OF HIAWATHA"** (Folkways Records and Service Corp., FP 9813) is a straightforward reading by Harry Fleetwood of selected excerpts from the poem by Henry Wadsworth Longfellow. Because of the nature of the excerpts this particular recording is better suited to junior and senior high school groups than to college classes, although certainly the recording has virtue for college library collections. The editors have chosen to present selections from "Hiawatha's Childhood," "Hiawatha's Sailing," "Hiawatha and the Pearl-Feather," "Hiawatha's Wooing," "The Hunting of the Pau-Puk-Keewis" and "Hiawatha's Departure." The beauty of the language and the lift of the rhythm are stressed in the reading which will surely appeal to classes studying this poem as representative of the longer works of Longfellow. (Ed. note: It is to be hoped that someday soon "The Courtship of Miles Standish" and "Evangeline" will be similarly available.)

Paul Laurence Dunbar, James Weldon Johnson, Countee Cullen and Langston Hughes are all represented in Louis Untermeyer's "Modern American Poetry." So, too, are their works heard in the recording "POETRY OF THE NEGRO" (Glory Records GLP/1). In addition, works of Gwendolyn Brooks, M. Carl Holman and Armand Lanusse are also heard.

This is an unusual recording. The poems are, of course, selected as being representative of the authors. Unusual beauty and depth of meaning is developed by the readers, Sidney Poitier and Doris Belack. Each of these artists has had broad experience in public performance and each calls forth great feeling from a reservoir of talent in the delivery of these works. These poems will be, particularly for the first-time listener, instructive and entertaining. In the former sense because the listener is thus introduced to an immense body of work and some of America's finest poetry and in the latter sense because the delivery is so superbly matched to the written word. For those who are already familiar with some or all of these poets, new understanding and satisfaction can be gained from the listen-

ing experience.

Included in the recording are Paul Laurence Dunbar's "At Candle Light in' Time," "When Malindy Sings," "An Ante-Bellum Sermon," "The Debt," "Ere Sleep Comes Down to Soothe the Weary Eyes," and "We Wear the Mask." James Weldon Johnson is represented by "The Creation" and "Lift Every Voice" and Langston Hughes' "I, Too," "Blues at Dawn" and "Mother to Son" are heard. Gwendolyn Brooks offers "When You Have Forgotten Sunday"; M. Carl Holman "Debate of the Dark Brothers," and Armand Lanusse "Epigram."

Drama teachers will be interested in a technique of responsive recitation developed by Mr. Poitier and Miss Belack. This device can be very use-

ful for public readings by individuals working together as well as by verse speaking choirs. In addition, in one instance, Mr. Poitier and Miss Belack elect to give emphasis to a particular presentation ("Lift Every Voice") by reading it in chorus, with their voices rising together in both pitch and intensity as they approach the climactic end of the poem. This is, we reiterate, an unusual recording and one which can well serve in Drama, Literature and Human Relations classes in secondary schools and on the college level. In addition, this with other recordings can be used effectively as part of a school "poetry recital" scheduled for the noon hour, for a library period or for other informal listening situations.

# New Filmstrips

Described and evaluated by **ROBERT CHURCH, WALTER PILDITCH, and HAROLD WARD.** Producers should send review copies of filmstrips to Robert Church, Audio-Visual Coordinator, Herman Felsenthal School, 4101 S. Calumet Ave., Chicago 15, Illinois.

## SOCIAL STUDIES SERIES

Society for Visual Education, Inc., 1345 Diversey Parkway, Chicago 14, Illinois, Color Photographs: Grade Range — Middle Grades; Subject Area — Social Studies; Strips portray the development of the early beginnings of our present day unions and other organization.

**THE MEDIEVAL MANOR** (42 Frames). This filmstrip is interesting and very colorful. The description of the Medieval Manor becomes much more meaningful to the students through the use of color photographs. The scenes of real actors portraying the life of these times is much more valuable to the student than ordinary drawings. The student viewing this filmstrip has a chance to realize that these people, the serfs, lords, and kings actually existed and the events recorded in history books are made much more vivid to the student.

**THE TOWN AND ITS GUILDS** (41 Frames). This filmstrip gives a vivid description of the development of an early town and the formation of its guilds. The guilds, at first weak, later become powerful organizations. The decline of the guilds in later years is also covered. Comparison between the guilds and our present day unions is made through the use of excellent color photographs. This information is presented in a colorful playlet form which makes it interesting to the middle grade classroom. Facts are presented in such a way that their importance is displayed to the viewer.

## FAR WESTERN STATES SERIES

Visual Education Consultants, 2066 Helena Street, Madison 4, Wisconsin, Color photographs: Grade Range — Sixth to Eighth; Subject Area — Social Studies, and Science.

**AGRICULTURE** (48 Frames). The states of Washington, Oregon, California, and Nevada are the states covered in this filmstrip series. Almost all of the agriculture found in this area, as emphasized in this film, are located in the Willamette-Puget Sound

Valley, Inland Fruit and Wheat Empire, Central Valley of California, Vale of Southern California, and the Imperial Valley. The frames illustrate the extensive variety of agriculture found in the area and point out peculiar farming methods used in the far west such as special irrigation methods in California which yield up to three crops per year.

**LIFE AND CULTURE** (48 Frames). The same area as mentioned in the above report is included in this filmstrip. By means of excellent photography, the filmstrip shows how the rapid expansion of this region in the last fifty years has left its mark on the land not only in making the old culture obsolete but also in imposing contrasting ways of living in this area today. Excellent suggestions are included in the section "Things to Remember and Talk About" at the end of the filmstrip.

## SINGLE SUBJECT FILMSTRIPS

Visual Education Consultants, 2066 Helena Street, Madison 4, Wisconsin.

## Color Filmstrip Service for Educational Producers

A scene in the Manhattan Color Lab filmstrip on "Robinson Crusoe," processed for Dr. William Lewin's series of Photoplay Filmstrips.

Let us do all or part of the work you require in color processing. No order too small or too large for our special educational department.

## Manhattan Color Laboratory

254 W. 54th St., New York 36

Black and White, Grade Range — Grades Five to Eight and Above, Could be used for Adult Audiences; Subject Area — as noted.

**EARLY EXPLORERS AND SETTLERS IN AMERICA** (32 Frames; History). This filmstrip is a depiction of: (1) Columbus' belief that the world "was round," how this belief led to the discovery of America, and (2) the settlement of the first two colonies in America with the hardships encountered by the settlers. A few fifteenth century French and Spanish explorers are mentioned. The guide which accompanies the filmstrip contains: a vocabulary which might be presented before the film is shown, the readings on each frame, related activities, and a quiz which can be given after showing the filmstrip.

**ALASKA TODAY** (33 Frames; Current Events). This filmstrip takes the class on a tour of present-day Alaska. It presents a good over-all picture of Alaska touching on topography, industry, education, cities and population distribution, weather, defense, and wildlife. It could be used effectively either as motivation for a unit or as a culminating activity to summarize important information on Alaska.

(Continued from page 425)

(3) **DO NOT LEAVE** anything to chance. Even teachers will make mistakes or be careless with the AV equipment. Always outline your program and method in detail and be sure all teachers and all students understand it. Projector schedules, method of operation, and times for projector return should be clear, concise, and consistent.

(4) **DO NOT TRY** to keep a check on your equipment yourself. Select the most trustworthy student you have, give him a suitable title, and make him responsible for checking the equipment at the end of the day. This will keep track of any breakdowns or irregularities.

(5) **NEVER LEAVE** your equipment subject to being taken in or out on the honor system. Be sure there is some check-out system even for the shortest cord or the tiniest wire. In a large school, particularly, equipment has a peculiar way of disappearing. No one steals it. It is just placed somewhere or taken out and, over a period of years, with a change in personnel, no one seems to remember what happened to it or who was responsible for it.

(6) **NEVER EVER SHARE** your AVA room with anyone else. This can

be the most confusing set-up ever faced by a harassed co-ordinator. When I took over AVA at MY SCHOOL, we shared a room with the band, the art department, and the science department. The band stored huge sousaphone cases, the art department stored surplus paper and colored chalk, and the science department kept extra cases, desks, and storage cabinets — all in the AVA room. All the teachers in these departments possessed a key and you can imagine how much privacy there was for anyone. I blamed my students when the room was disorderly. They blamed the art students. The science students said we were all confused. To top it off, the band reported

us to the principal because they thought we were mistreating their sousaphone cases. Because of a shortage of room facilities, this problem is yet to be solved. But I strongly recommend that, if you are the AVA co-ordinator at YOUR SCHOOL, you secure a room to yourself, change the lock, and hide the key.

(7) **DON'T WORRY.** Nothing is going to turn out *all* right.

So there you are; the seven ways *not* to run an AVA program. I recommend you not use them . . . REVERE them! If you follow the above suggestions, I personally guarantee your program will be a success.

"I personally asked one of our instructors to give me his opinion of the filmstrips and I quote him as saying: **'THEY ARE THE FINEST PIECE OF WORK EVER PRODUCED IN THE AUDIO-VISUAL INDUSTRY.'**"

## THE PAGEANT OF AMERICA FILMSTRIPS

Emphasizing the use of authentic contemporary pictures of exceptional interest and value, this remarkable series is the culmination of five years of scholarly, painstaking work by top-ranking historians and educators. The 30 units visualize the complete life story of our Nation, including the frequently neglected areas of our sociological, cultural and industrial progress. The net result is a new, incomparable achievement which fortifies and supplements the curriculum in American history and many other studies, including science, geography, literature, economics, civics and art. A professionally prepared Teacher's Guide for each unit is an extremely helpful, time-saving aid. Suitable for use at all levels, this award-winning series has been promptly adopted by school systems from coast to coast.

MAKE SURE YOUR LIBRARY HAS COMPLETE SETS OF

### THE PAGEANT OF AMERICA

15 magnificent volumes, combining the appeal of over 11,500 authentic pictures and maps with 1,250,000 words of interest-sustaining text, provide a vast and moving panorama of America's progress and development in all important aspects. This notable series is recommended for first purchase as exceptionally valuable for study and reference.

### THE CHRONICLES OF AMERICA

The most thoroughly interesting, readable and authoritative series in American historical literature. Each of its 56 volumes, from pre-discovery days to the end of World War II, is by a distinguished author who expresses his penetrating scholarship with the charm of a refreshing narrative. No library is complete without the 56 famous Chronicles.

THESE STANDARD FILMSTRIPS AND BOOKS PROVIDE THE BASIS FOR STRAIGHT THINKING ABOUT OUR AMERICAN WAY OF LIFE.

**YALE UNIVERSITY PRESS FILM SERVICE**

386 Fourth Avenue

New York 16, N. Y.

THE CHRONICLES OF AMERICA PHOTOPLAYS, 15 authentic and inspiring silent films, available to all schools at a moderate rental, are highly recommended.

## NEW EQUIPMENT

For more information about any of the equipment announced here, use the Readers' Service Coupon on page 450.

**Audio Devices "C-Slot" Tape Reel.** The unique design features a curved groove in the hub for threading. Tape is simply slipped into this groove in the opposite direction of reel rotation and the recorder is ready to use. All sharp edges are eliminated in the new reel on which all Audiotape is being made available in the seven and five-inch sizes.

For more information circle 101 on coupon

**Audio Devices Master Audiotape.** Reduces layer-to-layer print-through almost to the vanishing point—print-through being the "leakage" of signal from one layer to another in a reel of tape, causing an echo effect on tape recordings and on the phonograph records made from them. Because print-through is cumulative in its effect, Master Audiotape is particularly essential for storage of master tapes.

For more information circle 102 on coupon

**Audio-Master Butan Record Player** \$89.50 plus F.E.T. The 3-speed transistorized portable player is built into a carrying case 13"x11"x5". The Electromotor operates on a six-volt battery. Frequency range 50-13,000 cycles.

For more information circle 103 on coupon

**Anco Duolet Roll Film Projector** \$39.95. Handles 2 1/4"x2 1/4" roll, 35mm, Bantam, and Super Slides. Made entirely

of metal, it is only 6" high, 13" long, and 8" wide; finished in soft brown and gold colors. Efficient optical system utilizes 300-watt projection lamp burning in a horizontal position and aspherical condenser system. Built-in storage compartment holds 40—2 1/4 x 2 1/4 slides. Also built-in storage compartment for card. Carrying handle.

For more information circle 104 on coupon

**Anco Universal Slide Viewer.** \$2.95. Accommodates 2 1/4" x 2 1/4", 35mm, Bantam, and Super slides. Only 3 1/4" x 3 1/2" x 1" in size when folded, when opened for viewing, slides fit easily into a retaining channel which holds them in place before a frasted viewing screen. Magnifying eyepiece enlarges picture 2X. Available in gray, red, blue, or green.

For more information circle 105 on coupon

**Baumhauer Portable Amplifying Lectern.** Incorporates 10-watt amplifier, speaker, microphone with chesty mike holder, plywood case, plug-in light. Provision for plugging in phonograph. Weighs 22 lbs. A complete P.A. unit.

For more information circle 106 on coupon

**Bell & Howell Rack-Mounting Tape Recorder** \$229.95. Affords up to two full hours of recording and playback time on each side of a thin-base dual tape. The Model 787A is supplied without case or speaker, ready to install in a sound system panel. It is 14"x19", standard for commercial sound system racks. 8-watt push-pull amplifier operates the control solenoids, brakes the three motors, and affords high fidelity equalization.

For more information circle 107 on coupon

**Bell & Howell Spool-Loading 16mm Cameras.** The Model 240A holds 100 feet of film, weighs 4 lbs. 15 ounces, finished in black, automatic threading, runs 32 feet of film per winding, 8 - 16 - 24 - 32 - 48 frame operating speeds, camera stops with shutter closed, speed and footage dials, Sunomatic 20mm f:2.5 universal-focus or f:1.9 focusing mount, viewfinder calibrated for lenses 20mm to 4-inches, continuous run and stop frame features. Model 240T has 2-lens turret. Model 24-TA has 3-lens turret. \$179.95 to \$259.95.

For more information circle 108 on coupon

**Bell & Howell Tape Recorder** \$189.50. The Model 775 features acoustically balanced twin 5" speakers, P.A. switch control, quick speed changes (either 7.5 or 3.75 inches), fast forward and reverse, and resettable 3-digit program indicator to permit rapid location of any desired portion of tape. Five pushbuttons—for Stop, Forward, Rewind, Play, and Record—are conveniently grouped. Unit may also be set for normal, monitor, or P.A. use. "Pause" button quickly stops tape during playing or recording making it suitable for dictation (feature also operates with optional foot pedal).

With the former, slides are advanced by a simple push-pull mechanism and replaced in the slide trough after projection. With the automatic changer, 36 slides are permanently stored and protected in the magazine provided. Shows 35mm, Bantam, or super slides. 300-watt short-type G.E. projection lamp and f:3.5 lens.

For more information circle 121 on coupon  
**Elgeet Auto-Ex 8mm Movie Lens** \$49.50.  
Attaching to any 8mm movie camera with "D" mount, the unit includes a fast 1/2" f:1.9 lens coupled to an exposure meter. The photoelectric cell of the meter accepts the light from the scene being filmed and then operates a floating red needle. The user regulates an arrow by the same position as the needle thereby setting the lens exposure correctly.

For more information circle 124 on coupon  
**Elgeet Cinematov Lens Converters** for Brownie \$14.50 each. The Model BRW-8 is a 9mm wide angle converter covering 2X the area of the normal Kodak Brownie Movie Camera lens. The Model BRT-8 is a 25mm telephoto converter of 2X magnification. Both units are afocal and do not change the effective aperture of the lens. Color corrected far color and black-and-white filters. Coated with "Elcote."

For more information circle 125 on coupon  
**Elgeet Opticolor Lenses** \$29.95-\$49.95. Designed especially for shooting color movies, the new lenses are available in the following sizes: 38mm f:2.7—telephoto, 7mm f:2.7 wide angle, 38mm f:1.9 telephoto, and 9mm f:1.9 wide angle.

For more information circle 142 on coupon  
**Flormon & Babb Film Cement** 40c per ounce, the revolutionary new type cement may be used for all 16mm and 35mm film is said to prevent pulled splices and peeling to an appreciably greater degree.

For more information circle 126 on coupon  
**Flormon & Babb Film Repair and Splicing Block** \$19.95. Badly tarn and gouged 35mm slidefilms and 16mm movie film can be repaired on the new block, using Magic Mylar transparent splicing tape. Precision machined for accurate registration. Also

accommodates magnetic recording tape.

For more information circle 127 on coupon  
**General Photographic Bib Recording Tape Splicer.** Precision made of nickel-plated brass, the unit insures accurate splices. \$2.98.

### ARTS & CRAFTS

**French Drawings from Toulouse-Lautrec to Picasso** 66sl LAMBERT \$16.50. Bonnard, La Fresnaye, Maillat Marquet, Matisse, Madigliani, Seurat, Toulouse-Lautrec, Suzanne Valadon, Vuillard, Braque, Chagall, Delaunay, Derain, Despiou, Dufy, Dunoyer de Segonzac, Gonzalez, Juan Gris, Laurens, Leger, Metzinger, Picasso, Villon. For more information circle 147 on coupon

**Leonardo Da Vinci: Giant of the Renaissance** mp EBF 25min sd col \$225 b&w \$112.50. A biographical film. JH.

For more information circle 148 on coupon

**Painting Shadows** mp EBF 11 min sd col \$100. An important addition to the Eliat O'Hara art series, the film clearly relates the physical laws of light to the specific requirements of the art student. Besides demonstrating effective techniques for painting shadows in water color, Mr. O'Hara helps the student find his own way as an accurate observer and interpreter of nature. SH.

For more information circle 149 on coupon

**Pointing with Calligraphy** mp EBF 12min sd col \$100. Shows how picture-writing developed into a coherent written language. Examples of calligraphy shown in Egyptian hieroglyphics, the Mexican calendar stone, the petroglyphs of cliff-dwelling American Indians, and the symbolic characters in Oriental script. Shows use of calligraphy as a device for adding richness and detail to a subject and for simple adornment. Closing scenes show modern uses of calligraphy and paintings by Burchfield, Dufy, Van Gagh, and O'Hara using the technique. SH.
